*The Action Plan for Australian Mammals 2012* Andrew Burbidge,Peter Harrison,John Woinarski,2014-06-02 The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals It complements The Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater These authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas For all the mammal taxa about 300 species

and subspecies considered Extinct Threatened Near Threatened or Data Deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data The book also presents the current conservation status of each taxon under Australian legislation what additional information is needed for managers and the required management actions Recovery plans where they exist are evaluated The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included All accounts include maps based on the latest data from Australian state and territory agencies from published scientific literature and other sources The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action However it also shows that where guided by sound knowledge management capability and resourcing and longer term commitment there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia's heritage For such a legacy to endure our society must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised It is in this spirit that this account is offered

The Rat, 1915 *Restoring the Oceanic Island Ecosystem* Isamu Okochi, Kazuto Kawakami, 2010-03-15 Loss of biodiversity on tropical and subtropical oceanic islands is one of the most pressing conservation issues These oceanic islands are well known for their unique fauna and flora which evolved over long periods in isolation from external perturbation However the majority of these islands in the Pacific were eventually settled by Polynesians and then by Europeans by about 200 years ago only a few island groups remained untouched The Bonin Islands are one of these groups The Bonin Island group is one of the most remote in the world The islands are located 1 000 km south of Japan off the eastern fringe of Eurasia They were first discovered by the Japanese in 1670 settled by Westerners from Hawaii in 1830 and finally recognized as a Japanese territory in 1862 on condition that previous settlers would be protected and allowed to remain with full rights Because of this complicated history the Bonins have two names
