Colloid Chemistry II Markus Antonietti, 2003-07-03 Over the past forty years good old fashioned colloid chemistry has undergone something of a revolution transforming itself from little more than a collection of qualitative observations of the macroscopic behavior of some complex systems into a discipline with a solid theoretical foundation and a whole host of new chemical techniques It can now boast a set of concepts which go a long way towards providing an understanding of the many strange and interesting behavior patterns exhibited by natural and artificial systems on the mesoscale This second volume of *Topics in Current Chemistry on Colloid Chemistry* focuses on supramolecular approaches and new approaches towards polymer colloids also with strong emphasis on biological and biomedical applications Again topics were chosen which are expected to

have broader relevance and to be interesting to a more general readership The volume opens with a contribution by C M Paleos in which new amphiphiles are presented which not only self assemble to micelles or vesicles but also possess the ability to show specific recognition of complementary H bridge patterns Such structures might point a way to a rational addressing of surfaces and supramolecular structures by purely chemical means
