controversies in computer science today *Adaptive Data Compression* Ross N. Williams, 2012-12-06 Following an exchange of correspondence I met Ross in Adelaide in June 1988 I was approached by the University of Adelaide about being an external examiner for this dissertation and willingly agreed Upon receiving a copy of this work what struck me most was the scholarship with which Ross approaches and advances this relatively new field of adaptive data compression This scholarship coupled with the ability to express himself clearly using figures tables and incisive prose demanded that Ross's dissertation be given a wider audience And so this thesis was brought to the attention of Kluwer The modern data compression paradigm furthered by this work is based upon the separation of adaptive context modelling adaptive statistics and arithmetic coding This work offers the most complete bibliography on this subject I am aware of It provides an excellent and lucid review of the field and should be equally as beneficial to newcomers as to those of us already in the field *Data Processing Digest* , 1990

Advances in Artificial Intelligence Eleni Stroulia, Stan Matwin, 2003-06-29 AI 2001 is the

14th in the series of Artificial Intelligence conferences sponsored by the Canadian Society for Computational Studies of Intelligence Soci t  nadienne pour l tude de l intelligence par ordinateur As was the case last year too the conference is being held in conjunction with the annual conferences of two other Canadian societies Graphics Interface GI 2001 and Vision Interface VI 2001 We believe that the overall experience will be enriched by this conjunction of conferences This year is the silver anniversary of the conference the first Canadian AI conference was held in 1976 at UBC During its lifetime it has attracted Canadian and international papers of high quality from a variety of AI research areas All papers submitted to the conference received at least three independent reviews Approximately one third were accepted for plenary presentation at the conference The best paper of the conference will be invited to appear in Computational Intelligence Long Term Human-Computer Interaction Richard C. Thomas, 2012-12-06 This book is about longitudinal research in Human Computer Interaction HCI Since the early 1980s much has been understood about the problems of novices learning new systems as well as the performance of expert users However there is still a lot to discover about the transition from novice to expert and its implications for the design of systems For instance How long does it take to become expert Does early experience of a system have any effect on subsequent flexibility How can flexibility and long term learning be promoted Are there strong constraints that should be taken into account in the design of adaptive systems Longitudinal research in HCI has been rare for many reasons There is always pressure to obtain results the current climate of short termism does nothing to promote a longer perspective The field of HCI itself is changing fast and there are often virgin technologies to explore which can be more exciting and potentially profitable than research aimed at basic understanding There is also a possibly mistaken view that longitudinal studies are always inherently expensive The present volume grew out of a project at Sydney University The very first ideas were discussed in 1989 In 1991 data logging started of a mainly undergraduate population using a Unix based editor sam Pike 1987 Due to good fortune the system continued unchanged into a second year and it became clear data collection had very low marginal costs *Engineering Human Computer Interaction and Interactive Systems* R mi Bastide, Philippe Palanque, J rg Roth, 2005-07-04 As its name suggests the EHCI DSVIS conference has been a special event merging two different although overlapping research communities EHCI Engineering for Human Computer Interaction is a conference organized by the IFIP 2.7.13.4 working group started in 1974 and held every three years since 1989 The group's activity is the scientific investigation of the relationships among the human factors in computing and software engineering DSVIS Design Specification and Verification of Interactive Systems is an annual conference started in 1994 and dedicated to the use of formal methods for the design of interactive systems Of course these two research domains have a lot in common and are informed by each other's results The year 2004 was a good opportunity to bring closer these two research communities for an event the 11th edition of DSVIS and the 9th edition of EHCI EHCI DSVIS was set up as a working conference bringing together researchers and practitioners interested in strengthening the scientific foundations of user

interface design specification and verification and in examining the relationships between software engineering and human computer interaction The call for papers attracted a lot of attention and we received a record number of submissions out of the 65 submissions 23 full papers were accepted which gives an acceptance rate of approximately 34% Three short papers were also included The contributions were categorized in 8 chapters Chapter 1 Usability and Software Architecture contains three contributions which advance the state of the art in usability approaches for modern software engineering

Text, Speech and Dialogue Petr Sojka,Ivan Kopecek,Karel Pala,2003-08-02 The Text Speech and Dialogue TSD Conference 2002 it should be noticed is now being held for the fth time and we are pleased to observe that in its short history it has turned out to be an international forum successfully intertwining the basic elds of NLP It is our strong hope that the conference contributes to a better understanding between researchers from the various areas and promotes more intensive mutual cooperation So far the communication between man and computers has displayed a one way nature humans have to know how the chines work and only then can they understand them The opposite however is still quite far from being real our understanding of how our user friendly computers can understand us humans is not deep enough yet A lot of work has to be done both in the near and distant future Let TSD 2002 be a modest contribution to this goal The conference also serves well in its second purpose to facilitate researchers meeting in the NLP eld from Western and Eastern Europe Moreover many participants now come from other parts of the world thus making TSD a real crossroadsforresearchersintheNLParea Thisvolumecontainstheproceedings of this conference held in Brno September 9 12 2002 We were honored to have as keynote speakers James Pustejovsky from Brandeis University and Ronald Cole from the University of Colorado We would like to thank all the Program Committee members and external reviewers for their conscientious and diligent reviewing work
