Ina V. S. Mullis, Lynn Jenkins, National Assessment of Educational Progress (Project), 1990. Intended to serve as a resource for the many and varied groups concerned with improving students' reading proficiencies, this report from the Nation's Report Card provides a long-term perspective on students' reading skills and strategies based on a series of five national assessments conducted from 1971 to 1988. Each chapter of the report provides a different perspective on trends in students' reading abilities. The first chapter describes changes in the average reading performance of 9, 13, and 17-year-olds across the five reading trend assessments conducted by the National Assessment of Educational Progress (NAEP) between 1971 and 1988. The second chapter defines levels of reading proficiency and presents the percentages of students attaining these successive levels in each assessment. The third chapter summarizes trends in students' responses to questions on their reading instruction and experiences and investigates the relationships between these background factors and reading proficiency. Overall, the findings described in the report reveal generally positive but subtle changes in reading performance at the national level since 1971: 1. nine-year-olds assessed in 1988 read significantly better than their counterparts assessed in 1971, but this progress was made in the 1970s; 2. thirteen-year-olds' reading achievement has fluctuated slightly over the years; and 3. seventeen-year-old students assessed in 1988 read significantly better than their counterparts assessed in either 1971 or 1975. A procedural appendix and an appendix of data are attached.

RS      **To Read Or Not to Read** Dana Gioia, 2008-03

This report gathers and collates the best national data available to provide a reliable, comprehensive overview of American reading today. This report relies on the most accurate data available, which consists of large national studies conducted on a regular basis by U.S. federal agencies, supplemented by academic foundation business surveys. Although there has been measurable progress in recent years in reading ability at the elementary school level, all progress appears to halt as children enter their teenage years. There is a general decline in reading among teenage and adult Americans. Both reading ability and the habit of regular reading have greatly declined among college graduates. The declines have demonstrable social, economic, cultural, and civic implications.
