Robot Control 2003 (SYROCO '03) Ignacy Duleba, Jurek Sasiadek, 2004

Intelligent Mobile Robot Navigation Federico Cuesta, Anibal Ollero, 2005-03-11 Intelligent Mobile Robot Navigation builds upon the application of fuzzy logic to the area of intelligent control of mobile robots Reactive planned and teleoperated techniques are considered leading to the development of novel fuzzy control systems for perception and navigation of nonholonomic autonomous vehicles The unique feature of this monograph lies in its comprehensive treatment of the problem from the theoretical development of the various schemes

down to the real time implementation of algorithms on mobile robot prototypes As such the book spans different domains ranging from mobile robots to intelligent transportation systems from automatic control to artificial intelligence

Human Computer Interaction Kikuo Asai,2008-10-01 The book consists of 20 chapters each addressing a certain aspect of human computer interaction Each chapter gives the reader background information on a subject and proposes an original solution This should serve as a valuable tool for professionals in this interdisciplinary field Hopefully readers will contribute their own discoveries and improvements innovative ideas and concepts as well as novel applications and business models related to the field of human computer interaction It is our wish that the reader consider not only what our authors have written and the experimentation they have described but also the examples they have set

Multibody Dynamics Krzysztof Arczewski,Wojciech Blajer,Janusz Fraczek,Marek Wojtyra,2010-11-08 The ECCOMAS Thematic Conference Multibody Dynamics 2009 was held in Warsaw representing the fourth edition of a series which began in Lisbon 2003 and was then continued in Madrid 2005 and Milan 2007 held under the auspices of the European Community on Computational Methods in Applied Sciences ECCOMAS The conference provided a forum for exchanging ideas and results of several topics related to computational methods and applications in multibody dynamics through the participation of 219 scientists from 27 countries mostly from Europe but also from America and Asia This book contains the revised and extended versions of invited conference papers reporting on the state of the art in the advances of computational multibody models from the theoretical developments to practical engineering applications By providing a helpful overview of the most active areas and the recent efforts of many prominent research groups in the field of multibody dynamics this book can be highly valuable for both experienced researches who want to keep updated with the latest developments in this field and researches approaching the field for the first time

Intelligent Control Systems Using Computational Intelligence Techniques A.E. Ruano,2005-07-18 Intelligent Control techniques are becoming important tools in both academia and industry Methodologies developed in the field of soft computing such as neural networks fuzzy systems and evolutionary computation can lead to accommodation of more complex processes improved performance and considerable time savings and cost reductions Intelligent Control Systems using Computational Intelligence Techniques details the application of these tools to the field of control systems Each chapter gives an overview of current approaches in the topic covered with a set of the most important references in the field and then details the author's approach examining both the theory and practical applications

Advanced, Contemporary Control Andrzej Bartoszewicz,Jacek Kabziński,Janusz Kacprzyk,2020-06-24 This book presents the proceedings of the 20th Polish Control Conference A triennial event that was first held in 1958 the conference successfully combines its long tradition with a modern approach to shed light on problems in control engineering automation robotics and a wide range of applications in these disciplines The book presents new theoretical results concerning the steering of dynamical systems as well as industrial case studies and worked solutions to real world problems in contemporary

engineering It particularly focuses on the modelling identification analysis and design of automation systems however it also addresses the evaluation of their performance efficiency and reliability Other topics include fault tolerant control in robotics automated manufacturing mechatronics and industrial systems Moreover it discusses data processing and transfer issues covering a variety of methodologies including model predictive robust and adaptive techniques as well as algebraic and geometric methods and fractional order calculus approaches The book also examines essential application areas such as transportation and autonomous intelligent vehicle systems robotic arms mobile manipulators cyber physical systems electric drives and both surface and underwater marine vessels Lastly it explores biological and medical applications of the control theory inspired methods Intelligent Autonomous Vehicles 2004 (IAV 2004) J. Santos-Victor,M. I. Ribeiro,2005 The Synthesis of Three Dimensional Haptic Textures: Geometry, Control, and Psychophysics Gianni Campion,2011-05-16 The sense of touch is fundamental during the interaction between humans and their environment in virtual reality objects are created by computer simulations and they can be experienced through haptic devices In this context haptic textures are fundamental for a realistic haptic perception of virtual objects This book formalizes the specific artefacts corrupting the rendering of virtual haptic textures and offers a set of simple conditions to guide haptic researchers towards artefact free textures The conditions identified are also extremely valuable when designing psychophysical experiments and when analyzing the significance of the data collected The Synthesis of Three Dimensional Haptic Textures Geometry Control and Psychophysics examines the problem of rendering virtual haptic textures with force feedback devices The author provides an introduction to the topic of haptic textures that covers the basics of the physiology of the skin the psychophysics of roughness perception and the engineering challenges behind haptic textures rendering The book continues with the presentation of a novel mathematical framework that characterizes haptic devices texturing algorithms and their ability to generate realistic haptic textures Finally two psychophysical experiments link the perception of roughness with the parameters of the haptic rendering algorithms This book formalizes the specific artefacts corrupting the rendering of virtual haptic textures and offers a set of simple conditions to guide haptic researchers towards artefact free textures The conditions identified are also extremely valuable when designing psychophysical experiments and when analyzing the significance of the data collected
