Poole, Virginia I. Postrel, 1993 A collection of articles from Reason magazine Includes interviews with Milton Friedman and Ronald Reagan      *The American Robot* Dustin A. Abnet, 2020-03-27 Although they entered the world as pure science fiction robots are now very much a fact of everyday life Whether a space age cyborg a chess playing automaton or simply the smartphone in our pocket robots have long been a symbol of the fraught and fearful relationship between ourselves and our creations Though we tend to think of them as products of twentieth century technology the word robot itself dates to only 1921 as a concept they have colored US society and culture for far longer as Dustin A Abnet shows to dazzling effect in *The American Robot* In tracing the history of the idea of robots in US culture Abnet draws on intellectual history religion literature film and television He explores how robots and their many kin have not only conceptually connected but literally embodied some of the most critical questions in modern culture He also investigates how the discourse around robots has reinforced social and economic inequalities as well as fantasies of mass domination chilling thoughts that the recent increase in job automation has done little to quell *The American Robot* argues that the deep history of robots has abetted both the literal replacement of humans by machines and the figurative transformation of humans into machines connecting advances in technology and capitalism to individual and societal change Look beneath the fears that fracture our society Abnet tells us

and you're likely to find a robot lurking there      *The Early Works* Patrick Dugan, 2011-02-20 Original short pieces of fiction nonfiction from Patrick Dugan author of *Dilettante*      *Exploring Robotic Minds* Jun Tani, 2017 How do minds work In *Exploring Robotic Minds* Jun Tani answers this fundamental question by reviewing his own pioneering neurorobotics research project      **In the Peanut Gallery with Mystery Science Theater 3000** Robert G. Weiner, Shelley E. Barba, 2014-01-10 The award winning television series *Mystery Science Theater 3000* 1988-1999 has been described as the smartest funniest show in America and forever changed the way we watch movies The series featured a human host and a pair of robotic puppets who while being subjected to some of the worst films ever made provided ongoing hilarious and insightful commentary in a style popularly known as riffing These essays represent the first full length scholarly analysis of *Mystery Science Theater 3000* MST3K which blossomed from humble beginnings as a Minnesota public access television show into a cultural phenomenon on two major cable networks The book includes interviews with series creator Joel Hodgson and cast members Kevin Murphy and Trace Beaulieu      *Shadows of the Mind* Roger Penrose, 1994 Presents the author's thesis that consciousness in its manifestation in the human quality of understanding is doing something that mere computation cannot and attempts to understand how such non computational action might arise within scientifically comprehensive physical laws      *Robot Brains* Pentti O. Haikonen, 2007-09-27 Haikonen envisions autonomous robots that perceive and understand the world directly acting in it in a natural human like way without the need of programs and numerical representation of information By developing higher level cognitive functions through the power of artificial associative neuron architectures the author approaches the issues of machine consciousness *Robot Brains* expertly outlines a complete system approach to cognitive machines offering practical design guidelines for the creation of non numeric autonomous creative machines It details topics such as component parts and realization principles so that different pieces may be implemented in hardware or software Real world examples for designers and researchers are provided including circuit and systems examples that few books on this topic give In novel technical and practical detail this book also considers the limitations and remedies of traditional neural associators in creating true machine cognition basic circuit assemblies cognitive neural architectures how motors can be interfaced with the associative neural system in order for fluent motion to be achieved without numeric computations memorization imagination planning and reasoning in the machine the concept of machine emotions for motivation and value systems an approach towards the use and understanding of natural language in robots The methods presented in this book have important implications for computer vision signal processing speech recognition and other information technology fields Systematic and thoroughly logical it will appeal to practising engineers involved in the development and design of robots and cognitive machines also researchers in Artificial Intelligence Postgraduate students in computational neuroscience and robotics and neuromorphic engineers will find it an exciting source of information      *Machine Dreams* Philip Mirowski, 2002 This is the first cross over book into the history of science written

by an historian of economics It shows how history of technology can be integrated with the history of economic ideas The analysis combines Cold War history with the history of postwar economics in America and later elsewhere revealing that the Pax Americana had much to do with abstruse and formal doctrines such as linear programming and game theory It links the literature on cyborg to economics an element missing in literature to date The treatment further calls into question the idea that economics has been immune to postmodern currents arguing that neoclassical economics has participated in the deconstruction of the integral self Finally it argues for an alliance of computational and institutional themes and challenges the widespread impression that there is nothing else besides American neoclassical economic theory left standing after the demise of Marxism

**Human Test** Ron Folman, 2025-03-25 Discover how artificial intelligence will challenge everything we believe about consciousness free will creativity and what makes us truly human In an era when AI will soon predict our breakfast choices shopping habits and romantic attractions with uncanny accuracy quantum physicist Ron Folman poses a provocative question If we're this predictable are we truly conscious beings with free will or simply sophisticated machines Drawing from quantum physics cognitive science philosophy and rising technologies The Human Test explores how the rise of AI and Big Data is forcing us to confront uncomfortable truths about human nature As technology evolves to predict our behavior with increasing precision Folman challenges us to reconsider what it means to be truly alive and conscious Specifically he shows by way of a breathtaking narrative that already in the very near future nonconscious AI will give rise to the most profound experiment ever performed on humans providing us for the first time with quantitative answers to these core human enigmas But within this seemingly dystopian future lies an unexpected source of hope our capacity for creativity Folman reveals how this uniquely human trait might be the key to maintaining our humanity in an age of algorithmic predictability Moreover as he journeys to the nucleus of creativity he suggests effective ways to enhance and empower its horizon The Human Test isn't just another book about AI it's a profound investigation into what makes us human and how we can remain so in a world that increasingly treats us as data points to be predicted and controlled

Possible Minds John Brockman, 2020-02-18 Science world luminary John Brockman assembles twenty-five of the most important scientific minds people who have been thinking about the field artificial intelligence for most of their careers for an unparalleled round table examination about mind thinking intelligence and what it means to be human Artificial intelligence is today's story the story behind all other stories It is the Second Coming and the Apocalypse at the same time Good AI versus evil AI John Brockman More than sixty years ago mathematician philosopher Norbert Wiener published a book on the place of machines in society that ended with a warning we shall never receive the right answers to our questions unless we ask the right questions The hour is very late and the choice of good and evil knocks at our door In the wake of advances in unsupervised self-improving machine learning a small but influential community of thinkers is considering Wiener's words again In Possible Minds John Brockman gathers their disparate visions of where AI might be taking us The fruit of the long history of Brockman's profound

engagement with the most important scientific minds who have been thinking about AI from Alison Gopnik and David Deutsch to Frank Wilczek and Stephen Wolfram Possible Minds is an ideal introduction to the landscape of crucial issues AI presents The collision between opposing perspectives is salutary and exhilarating some of these figures such as computer scientist Stuart Russell Skype co founder Jaan Tallinn and physicist Max Tegmark are deeply concerned with the threat of AI including the existential one while others notably robotics entrepreneur Rodney Brooks philosopher Daniel Dennett and bestselling author Steven Pinker have a very different view Serious searching and authoritative Possible Minds lays out the intellectual landscape of one of the most important topics of our time      **Human Programming** Scott Selisker,2016-08-01

Do our ways of talking about contemporary terrorism have a history in the science technology and culture of the Cold War Human Programming explores this history in a groundbreaking work that draws connections across decades and throughout American culture high and low Scott Selisker argues that literary cinematic and scientific representations of the programmed mind have long shaped conversations in U S political culture about freedom and unfreedom and about democracy and its enemies Selisker demonstrates how American conceptions of freedom and of humanity have changed in tandem with developments in science and technology including media technology cybernetics behaviorist psychology and sociology Since World War II propagandists scientists and creative artists have adapted visions of human programmability as they sought to imagine the psychological manipulation and institutional controls that could produce the inscrutable subjects of totalitarian states cults and terrorist cells At the same time writers across the political spectrum reimagined ideals of American freedom democracy and diversity by way of contrast with these posthuman specters of mental unfreedom Images of such human automatons circulated in popular films travelogues and the news media giving form to the nebulous enemies of the postwar and contemporary United States totalitarianism communism total institutions cult extremism and fundamentalist terrorism Ranging from discussions of The Manchurian Candidate and cyberpunk science fiction to the cases of Patty Hearst and the American Taliban John Walker Lindh Human Programming opens new ways of understanding the intertwined roles of literature film science and technology in American culture      **Cybertext** Espen J. Aarseth,1997-09-11

Do the rapidly expanding genres of digital literature mean that the narrative mode novels films television drama is losing its dominant position in our culture Author Espen Aarseth eases our fears of literary loss at least temporarily by pointing out that electronic text requires an interactive response to generate a literary sequence Where s the fun if you have to write your own ending 21 illustrations      *Object-Oriented Simulation with Hierarchical, Modular Models* Bernard P. Zeigler,2014-05-10

Object Oriented Simulation with Hierarchical Modular Models Intelligent Agents and Endomorphic Systems describes an approach to object oriented discrete event simulation and the concepts of hierarchical modular model construction The implementation of the concepts of multifaceted modeling methodology in the DEVS Scheme modeling and simulation environment is discussed The use of the DEVS Scheme environment in modeling artificial intelligent agents is also

considered along with the concept of endomorphism to characterize the application of self embedded models including models of self Comprised of 15 chapters this book begins with an overview of the dimensions of knowledge representation in simulation environments followed by a discussion on object oriented programming as well as the concepts of modular hierarchical models and the system entity structure Subsequent chapters focus on digraph models and experimental frames DEVS formalism and DEVS Scheme simulation environment a model base for simple multi computer architectures and rule based specification of atomic models Model bases in endomorphic systems and intelligent agents are also examined This monograph will be of interest to simulation theorists as well as practitioners and researchers in the fields of artificial intelligence systems engineering computer science and engineering and operations research

The Rape of the Mind: The Psychology of Thought Control, Menticide, and Brainwashing Dr. Joost A. M. Meerloo, 2015-11-06 SINCE 1933 when a completely drugged and trial conditioned human wreck confessed to having started the Reichstag fire in Berlin Dr Joost A M Meerloo has studied the methods by which systematic mental pressure brings people to abject submission and by which totalitarians imprint their subjective truth on their victims minds The first two and one half years of WWII Dr Meerloo spent under the pressure of Nazi occupied Holland witnessing at first hand the Nazi

methods of mental torture on more than one occasion Then after personal experiences with enforced interrogation he escaped from a Nazi prison and certain death to England where he was able as Chief of the Psychological Department of the Netherlands Forces to observe and study coercive methods officially After the war he came to the United States As more and more cases of thought control brainwashing and mental coercion were disclosed Cardinal Mindszenty Colonel Schwable Robert Vogeler and others his interest grew It was Dr Meerloo who coined the word menticide the killing of the spirit for this peculiar crime It is Dr Meerloo s position that through pressure on the weak points in men s makeup totalitarian methods can turn anyone into a traitor And in *The Rape of the Mind* he goes far beyond the direct military implications of mental torture to describing how our own culture unobtrusively shows symptoms of pressurizing people s minds He presents a systematic analysis of the methods of brainwashing and mental torture and coercion and shows how totalitarian strategy with its use of mass psychology leads to systematized rape of the mind He describes the new age of cold war with its mental terror verbocracy and semantic fog the use of fear as a tool of mass submission and the problem of treason and loyalty so loaded with dangerous confusion *The Rape of the Mind* is written for the interested layman not only for experts and scientists Printed *All in the Mind?* Peter Clarke, 2015-05-15 Much progress has been made to understand the intricacies of the brain s workings Some have claimed and many assumed that these findings have challenged faith in God to the point of destruction Are we not mere neural machines Are religious experiences not just in the mind the products of abnormal brain events Is faith not just a side effect of evolution Not so according to neuroscientist Peter Clarke after a lifetime s study of the brain In this comprehensive book the current state of neuroscientific evidence is weighed up alongside ideas of what it means to be human the idea of the soul near death experiences and questions of free will and responsibility He engages with the leading thinkers in these areas including Francis Crick Richard Dawkins Daniel Dennett Sam Harris and Daniel Wegner
