Rockets and Ray Guns: The Sci-Fi Science of the Cold War Andrew May, 2018-05-26 The Cold War saw scientists in East and West racing to create amazing new technologies the like of which the world had never seen Yet not everyone was taken by surprise From super powerful atomic weapons to rockets and space travel readers of science fiction SF had seen it all before Sometimes reality lived up to the SF vision at other times it didn't The hydrogen bomb was as terrifyingly destructive as anything in fiction while real world lasers didn't come close to the promise of the classic SF ray gun Nevertheless when the scientific Cold War culminated in the Strategic Defence Initiative of the 1980s it was so science fictional in its aspirations that the media dubbed it Star Wars This entertaining account offering a plethora of little known facts and insights from previously classified military projects shows how the real world science of the Cold War followed in the footsteps of SF and how the two together changed our perception of both science and scientists and paved the way to the

world we live in today Modern Robotics Harry Henderson,2006 Profiles eleven notable scientists in the field of robotics discussing their research accomplishments ethical and professional obstacles and contributions Includes photographs illustrations chronology of notable events and a list of resources *Killer Robots* Armin Krishnan,2016-04-22 Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law Handbook of Research on Trends in Product Design and Development: Technological and Organizational Perspectives Silva, Arlindo,Simoes, Ricardo,2010-07-31 This book provides a detailed view on the current issues trends challenges and future perspectives on product design and development an area of growing interest and increasingly recognized importance for industrial competitiveness and economic growth Provided by publisher **Designing Robots, Designing Humans** Cathrine Hasse,Dorte Marie Søndergaard,2019-07-24 Whilst most research concentrates on the imagined future of robotics this book brings together a group of international researchers to explore the different ways that robots and humans engage with one another at this point in history Robotic design is advancing at an incredible pace and consequently the role of robots has expanded beyond mechanical work in the industrial sector to the social and domestic environment From kitchen table pets in the shape of dinosaurs or baby seals to robot arms that assist with eating to self driving cars this book explores the psychological impact of robotic engagement especially in domestic settings Each chapter explores a different aspect of humanoid robotics for example the relationship between robotics and gender citizenship moral agency ethics inequality and psychological development as well as exploring the growing role of robots in education care work and intimate relationships Drawing on research from across the fields of psychology anthropology and philosophy this ground breaking volume discusses the emerging social side of robotics By examining our relationship with robots now this book offers a new and innovative opportunity for understanding our future with robots and robotic culture Designing Robots Designing Humans will be interest to researchers of artificial intelligence and humanoid robotics as well as researchers from cognitive and social psychology philosophy computer science anthropology linguistics and engineering backgrounds **The Mortal Instruments Companion** Lois H. fantasy world its major themes and its characters in a fan's reference that also includes an author biography **Human Robotics** Etienne Burdet, David W. Franklin, Theodore E. Milner, 2018-05-04 A synthesis of biomechanics and neural control that draws on recent advances in robotics to address control problems solved by the human sensorimotor system This book proposes a transdisciplinary approach to investigating human motor control that synthesizes musculoskeletal biomechanics and neural control The authors argue that this integrated approach which uses the framework of robotics to understand sensorimotor control problems offers a more complete and accurate description than either a purely neural computational approach or a purely biomechanical one The authors offer an account of motor control in which explanatory models are based on experimental evidence using mathematical approaches reminiscent of physics These computational models yield algorithms for motor control that may be used as tools to investigate or treat diseases of the sensorimotor system and to guide the development of algorithms and hardware that can be incorporated into products designed to assist with the tasks of daily living The authors focus on the insights their approach offers in understanding how movement of the arm is controlled and how the control adapts to changing environments The book begins with muscle mechanics and control progresses in a logical manner to planning and behavior and describes applications in neurorehabilitation and robotics The material is self contained and accessible to researchers and professionals in a range of fields including psychology kinesiology neurology computer science and robotics **From Here to There** Vivian Kirkfield, Gilbert Ford, 2021

Celebrating the invention of vehicles this collective biography tells the inspiring stories of the visionaries who changed the way we move across air water and land Perfect for fans of Mistakes that Worked and Girls Think of Everything **My Fair Ladies** Julie Wosk, 2015-07-28 The fantasy of a male creator constructing his perfect woman dates back to the Greek myth of Pygmalion and Galatea Yet as technology has advanced over the past century the figure of the lifelike manmade woman has become nearly ubiquitous popping up in everything from Bride of Frankenstein to Weird Science to The Stepford Wives Now Julie Wosk takes us on a fascinating tour through this bevy of artificial women revealing the array of cultural fantasies and fears they embody My Fair Ladies considers how female automatons have been represented as objects of desire in fiction and how living dolls have been manufactured as real world fetish objects But it also examines the many works in which the perfect woman turns out to be artificial a robot or doll and thus becomes a source of uncanny horror Finally Wosk introduces us to a variety of female artists writers and filmmakers from Cindy Sherman to Shelley Jackson to Zoe Kazan who have cleverly crafted their own images of simulated women Anything but dry My Fair Ladies draws upon Wosk's own experiences as a young female Playboy copywriter and as a child of the feminine mystique era to show how images of the artificial woman have loomed large over real women's lives Lavishly illustrated with film stills artwork and vintage advertisements this book offers a fresh look at familiar myths about gender technology and artistic creation **Systemic Innovation** Dimitri Uzunidis, 2020-11-03 INNOVATION IN ENGINEERING AND TECHNOLOGY SET Coordinated by Dimitri Uzunidis Systemic

innovation is based on business networks and new business models in a global economy integrated by flows of knowledge capital and goods The authors of this book consider the theory that innovations act as systems based on multi actor interactions Innovation is contextualized to demonstrate in what capacity a company or an entrepreneur can innovate The book details the management of scientific technical and cognitive resources the relationships between R D partners the creativity and the rules that allow a market and a company to innovate This contextualization associated with entrepreneurial strategy leads to systemic innovation This book analyzes some key sectors of the economy that are knowledge intensive and rapidly changing transport and communications defense information technology artificial intelligence and the environment

From Bricks to Brains Michael Robert William Dawson,Brian Dupuis,Michael Wilson,2010 Discussing the characteristics that distinguish embodied cognitive science from classical cognitive science the authors place a renewed emphasis on sensing and acting on the importance of physical embodiment and on the exploration of distributed notions of control They also show how synthesizing simple systems and observing their behaviour can generate new theoretical insights Numerous examples are brought forward to illustrate a key theme the importance of environment to an actor Even simple agents such as LEGO robots are capable of exhibiting complex behaviour when they can sense and alter the world around them Book Jacket

World to Come Mathew Burrows, Josef Braml, 2025-03-20 The return of trump and the End of the old Order The old world is dying the new world struggles to be born wrote the Italian philosopher Antonio Gramsci at the end of World War I Now is the time of monsters A witness to the rise of fascism in Italy Gramsci understood transitions can be dangerous The world today is at a similar inflection point With Donald Trump victorious in the 2024 US presidential election the Western liberal order presided by the United States since the end of the Second World War is over This timely book by two eminent strategic forecasters Mathew Burrows and Josef Braml illuminates where the West and the world are headed in the wake of the November election Weakened by recent military failures in Iraq and Afghanistan and potential setbacks in Ukraine and the Middle East the United States is declining as a global power even if it continues to play an outsized role on the world stage Not since the end of the Cold War has there been so much pessimism in the West and uncertainty about the future of the world A new set of destabilising factors regional conflicts climate change the growth of AI a global economic slowdown endemic illegal immigration are feeding off each other and producing more instability Far right and populist movements in Europe and North America thrive on this vulnerability As the world grapples with these issues separate conflicts in Middle East and Ukraine are threatening to shatter the nuclear weapons taboo that has held since 1945 Plus a fragmenting global economy with the growing protectionism by the United States and China is producing a world of slower growth A major war between the United States and China or between NATO

and Russia threatens to bring an end to civilisation But crises can also bring renewal Take for instance the advent of artificial intelligence which like past technological revolutions could result in better lives for millions Or the new technologies like green energy which can help us fight climate change Automation may eliminate some jobs but will help Western societies deal with declining populations World to Come is a clear eyed survey of the state of the US power and the consequences for the rest of the world It spells out the hard choices we would need to make as we tackle the rise of nationalism the slowdown in global economic growth and the inevitability of climate change And it s a call to action to ensure that the world that comes out of the end of Pax Americana is one we all want to live in
