**Robust Aeroservoelastic Stability Analysis** Rick Lind, Marty Brenner, 2012-12-06 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology impacts all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination The high performance control systems applications in aerospace and astronautics almost have a tradition of exploiting the most advanced control theoretical developments first The optimal control and filtering paradigm associated with the names of Kalman Bucy Anderson and Moore found application in the astronautics of the 1960 S and 1970 S At the beginning of the 1980 S control theory moved on to robustness singular values and  $\mu$  analysis This new work was associated with the names of James Doyle Glover Balas among others The Advances in Industrial Control monograph series have published several volumes over the years which have archived the applications experience garnered from applying robust control to the aerospace sector problems Rick Lind and Marty Brenner add to this set with their volume on robust aeroservoelastic stability This volume reports the application of the structured singular value to aeroelastic and aeroservoelastic aerospace problems     *Aeroservoelastic Uncertainty Model Identification from Flight Data* Martin J. Brenner, 2001     *Experimental Vibration Analysis for Civil Structures* Joel P. Conte, Rodrigo Astroza, Gianmario Benzoni, Glauco Feltrin, Kenneth J. Loh, Babak Moaveni, 2017-10-11 This edited volume presents selected contributions from the International Conference on Experimental Vibration Analysis of Civil Engineering Structures held in San Diego California in 2017 EVACES2017 The event brought together engineers scientists researchers and practitioners providing a forum for discussing and disseminating the latest developments and achievements in all major aspects of dynamic testing for civil engineering structures including instrumentation sources of excitation data analysis system identification monitoring and condition assessment in situ and laboratory experiments codes and standards and vibration mitigation     **Robust Control Design with MATLAB®** Da-Wei Gu, Petko H.
