**Robust Adaptation to Non-Native Accents in Automatic Speech Recognition** Silke Goronzy, 2002-12-19 Speech recognition technology is being increasingly employed in human machine interfaces A remaining problem however is the robustness of this technology to non native accents which still cause considerable difficulties for current systems In this book methods to overcome this problem are described A speaker adaptation algorithm that is capable of adapting to the current speaker with just a few words of speaker specific data based on the MLLR principle is developed and combined with confidence measures that focus on phone durations as well as on acoustic features Furthermore a specific pronunciation modelling technique that allows the automatic derivation of non native pronunciations without using non native data is described and combined with the previous techniques to produce a robust adaptation to non native accents in an automatic speech recognition system

#### **Computational Science and Its Applications - ICCSA 2008**

Osvaldo Gervasi,Beniamino Murgante,Antonio Laganà,David Taniar,Youngsong Mun,2008-06-28 This two volume set is assembled following the 2008 International Conference on Computational Science and Its Applications ICCSA 2008 a premium international event held in Perugia Italy from June 30 to July 3 2008 The collection of fully refereed high quality original works accepted as theme papers for presentation at ICCSA 2008 are published in this LNCS proceedings set This outstanding collection complements the volume of workshop papers traditionally published by IEEE Computer Society The

continuous support of computational science researchers has helped ICCSA to become a firmly established forum in the area of scientific computing and the conference itself become a recurring scientific and professional meeting that cannot be given up. The computational science field based on fundamental disciplines such as mathematics, physics and chemistry is finding new computational approaches to foster the human progress in heterogeneous and fundamental areas such as aerospace and automotive industries, bioinformatics and nanotechnology, studies, networks and grid computing, computational geometry and biometrics, computer education, virtual reality and art. Due to the growing complexity of many challenges in computational science, the use of sophisticated algorithms and emerging technologies is inevitable. Together these far-reaching scientific areas help to shape this conference in the areas of state of the art computational science research and applications encompassing the facilitating theoretical foundations and the innovative applications of such results in other areas. **Advanced**

**Microsystems for Automotive Applications 2005** Jürgen Valldorf, Wolfgang Gessner, 2005-12-19 Since 1995 the annual international forum on Advanced Microsystems for Automotive Applications AMAA has been held in Berlin. The event offers a unique opportunity for microsystems component developers, system suppliers and car manufacturers to show and to discuss competing technological approaches of microsystems based solutions in vehicles. The book accompanying the event has demonstrated to be an efficient instrument for the diffusion of new concepts and technology results. The present volume including the papers of the AMAA 2005 gives an overview on the state of the art and outlines imminent and mid term R D perspectives. The 2005 publication reflects as in the past the current state of discussions within industry. More than the previous publications the AMAA 2005 goes back to the technological requirements and indispensable developments for fulfilling the market needs. The large part of contributions dealing with sensors as well as sensor technologies and data fusion is exemplary for this tendency. In this context a paradigm shift can be stated. In the past the development focused predominantly on the detection and processing of single parameters originating from single sensors. Today the challenge increasingly consists in getting information of complex situations with a series of variables from different sensors and in evaluating this information. Smart integrated devices using the information deriving from the various sensor sources will be able to describe and assess a traffic situation or behaviour much faster and more reliable than a human being might be able to do. **Software Engineering and Middleware** Alberto Coen-Porisini, André van der Hoeck, 2007-07-12 The 3rd International Workshop on Software Engineering and Middleware SEM 2002 was held May 20-21 2002 in Orlando, Florida as a co-located event of the 2002 International Conference on Software Engineering. The workshop attracted 30 participants from academic and industrial institutions in many countries. Twenty seven papers were submitted of which 15 were accepted to create a broad program covering the topics of architectures, specification, components and adaptations, technologies and services. The focus of the workshop was on short presentations with substantial discussions afterwards. Thus we decided to include in this

proceedings also a short summary of every technical session which was written by some of the participants at the workshop. The workshop invited one keynote speaker Bobby Jadhav of CalKey who presented a talk on the design and use of model driven architecture and middleware in industry. We would like to thank all the people who helped organize and run the workshop. In particular we would like to thank the program committee for their careful reviews of the submitted papers. Wolfgang Emmerich for being an excellent General Chair and the participants for a lively and interesting workshop.

*Design and Control of Workflow Processes* Hajo A. Reijers, 2003-07-01. The motivation behind the conception of this monograph was to advance scientific knowledge about the design and control of workflow processes. A workflow processor or workflow for short is a specific type of business process, a way of organizing work and resources. Workflows are commonly found within large administrative organizations such as banks, insurance companies and governmental agencies. Carrying out the tasks of a workflow in a particular order is required to handle one type of case. Examples of cases are mortgage applications, customer complaints and claims for unemployment benefits. A workflow used in handling mortgage applications may contain tasks for recording the application, specifying a mortgage proposal and approving the final policy. The monograph concentrates on four workflow related issues within the area of Business Process Management: the field of designing and controlling business processes. The first issue is how workflows can be adequately modeled. Workflow modeling is an indispensable activity to support any reasoning about workflows. Different purposes of workflow modeling can be distinguished such as system enablement by Workflow Management Systems, knowledge management, costing and budgeting. The focus of workflow modeling in this monograph is a) to support simulation and analysis of workflows and b) to specify a new workflow design. The main formalism used for the modeling of workflows is the Petri net. Many interesting notions to define several relevant properties have been adopted such as the workflow net and the soundness notion. **Foundations of Software**

Among the topics covered are algorithms, software technology, functional programming, theory, distributed algorithms, term rewriting and constraint logic programming, complexity theory, process algebras, computational geometry and temporal logics, and verification theory. **SmartKom:**

**Foundations of Multimodal Dialogue Systems** Wolfgang Wahlster, 2006-09-05. With contributions by leading scientists in the field, this book gives the first comprehensive overview of the results of the seminal SmartKom project, one of the most advanced multimodal dialogue systems worldwide. Towards Adaptive Spoken Dialog Systems Alexander Schmitt, Wolfgang Minker, 2012-09-19. In *Monitoring Adaptive Spoken Dialog Systems*, authors Alexander Schmitt and Wolfgang Minker investigate statistical approaches that allow for recognition of negative dialog patterns in Spoken Dialog Systems (SDS). The

presented stochastic methods allow a flexible portable and accurate use Beginning with the foundations of machine learning and pattern recognition this monograph examines how frequently users show negative emotions in spoken dialog systems and develop novel approaches to speech based emotion recognition using hybrid approach to model emotions The authors make use of statistical methods based on acoustic linguistic and contextual features to examine the relationship between the interaction flow and the occurrence of emotions using non acted recordings several thousand real users from commercial and non commercial SDS Additionally the authors present novel statistical methods that spot problems within a dialog based on interaction patterns The approaches enable future SDS to offer more natural and robust interactions This work provides insights lessons and inspiration for future research and development not only for spoken dialog systems but for data driven approaches to human machine interaction in general
