Robust Optimization Directed Design:

Robust Optimization-Directed Design Andrew J. Kurdila, Panos M. Pardalos, Michael Zabrankin, 2006-06-04 Robust design that is managing design uncertainties such as model uncertainty or parametric uncertainty is the often unpleasant issue crucial in much multidisciplinary optimal design work Recently there has been enormous practical interest in strategies for applying optimization tools to the development of robust solutions and designs in several areas including aerodynamics the integration of sensing e.g. laser radars vision based systems and millimeter wave radars and control cooperative control with poorly modeled uncertainty cascading failures in military and civilian applications multi mode seekers sensor fusion and data association problems and tracking systems The contributions to this book explore these different strategies The expression optimization directed in this book's title is meant to suggest that the focus is not agonizing over whether optimization strategies identify a true global optimum but rather whether these strategies make significant design improvements

Robust Static Super-replication of Barrier Options Jan H. Maruhn, 2009 Static hedge portfolios for barrier options are very sensitive with respect to changes of the volatility surface To prevent potentially significant hedging losses this book develops a static super replication strategy with market typical robustness against volatility skew and liquidity risk as well as model errors Empirical results and various numerical examples confirm that the static superhedge successfully eliminates the risk of a changing volatility surface Combined with associated sub replication strategies this leads to robust price bounds for barrier options which are also relevant in the context of dynamic hedging The mathematical techniques used to prove appropriate existence duality and convergence results range from financial mathematics stochastic and semi infinite optimization convex analysis and partial differential equations to semidefinite programming

Wystup,2007-01-11 There has been an explosive growth in the number of corporates investors and financial institutions turning to structured products to achieve cost savings risk controls and yield enhancements However the exact nature risks and applications of these products and solutions can be complex and problems arise if the fundamental building blocks and principles are not fully understood This book explains the most popular products and strategies with a focus on everything beyond vanilla options dealing with these products in a literate yet accessible manner giving practical applications and case studies A special emphasis on how the client uses the products with interviews and descriptions of real life deals means that it will be possible to see how the products are applied in day to day situations the theory is translated into practice Note CD ROM DVD and other supplementary materials are not included as part of eBook file *Real-World Applications of*

Evolutionary Computing Stefano Cagnoni,Riccardo Poli,George D. Smith,David Corne,Martin Oates,Emma Hart,Pier L.

Lanzi, Egbert J. Willem, Yun Li, Ben Paechter, Terence C. Fogarty, 2003-07-31 The increasingly active field of Evolutionary Computation EC provides valuable tools inspired by the theory of natural selection and genetic inheritance to problem solving machine learning and optimization in many real world applications Despite some early intuitions about EC that can be dated back to the invention of computers and a better formal definition of EC made in the 1960s the quest for real world applications of EC only began in the late 1980s The dramatic increase in computer performances in the last decade of the 20th century gave rise to a positive feedback process EC techniques became more and more applicable stimulating the growth of interest in their study and allowing in turn new powerful EC paradigms to be devised In parallel with new theoretical results the number of fields to which EC is being applied is increasing day by day along with the complexity of applications and application domains In particular industrially relevant fields such as signal and image processing computer vision pattern recognition industrial control telecommunication scheduling and timetabling and aerospace engineering are employing EC techniques to solve complex real world problems
