Role Of Calcium And Comparable Cations In Animal Behaviour:

The Role of Calcium and Comparable Cations in Animal Behaviour Ralph G. Wilkins, Patricia C. Wilkins, 2003 Calcium and comparable cations are fast being recognised for their role as vital components of animal physiology When trying to answer questions such as why salmon can adjust to life in fresh water as well as seawater or why chilli peppers taste hot to humans but evoke little response from chickens we often find the answers lie in patterns of movement of these ions and their roles in sensing transmitting and collecting messages Bringing together scattered literature on calcium sodium potassium and magnesium in biology this book examines important biological contributions of these ions including enzyme activation effects in all types of muscle and biomineralization Attention is focused on channel construction and ion movement calcium as a second messenger and in the construction of solids and ion channelopathies with the help of personalities such as Agatha Christie van Gogh and Captain Cook *The Role of Calcium and Comparable Cations in Animal Behaviour* will be valued by a wide range of readers including students of bioinorganic chemistry and animal behavioural studies teachers and other professionals in academia

Buxton, Kathryn Hunchak-Kariouk, R. Edward Hickman, 1999 *Animal Behaviour* C. J. Barnard, 2012-12-06 The study of animal behaviour particularly from evolutionary and ecological viewpoints has been

one of the major growing points in biology over the last 10 to 15 years The degree of quantitative rigour in theoretical observational and experimental approaches to behaviour has increased dramatically As more of the rapidly growing research literature becomes a basic requirement for students reading animal behaviour at undergraduate level there is a need for a readily comprehensible text covering all major aspects of behaviour study to accompany their courses This book based on my first second and third year undergraduate lectures at the University of Nottingham is designed to meet that requirement The book begins with a discussion of the physiological and anatomical bases of behaviour the relationship between nervous system structure and function and behaviour hormonal effects on behaviour biological clocks perceptual mechanisms and stimulus filtering This leads to a consideration in Chapter 2 of how the animal integrates internal and external stimuli in making decisions about its behaviour and the way natural selection has shaped decision making processes and the organisation of motivation The first two chapters therefore deal with the instigation or causation of behaviour within the animal Chapters 3 and 4 deal with developmental aspects of behaviour Chapter 3 discusses behaviour genetics including the relationship between specific genes and behaviour the heritability of behaviour patterns the site of gene action in the body and the evolutionary consequences of a genetic basis to behaviour
