The Future of Aging, 2010-08-17 Just as the health costs of aging threaten to bankrupt developed countries this book makes the scientific case that a biological bailout could be on the way and that human aging can be different in the future than it is today Here 40 authors argue how our improving understanding of the biology of aging and selected technologies should enable the successful use of many different and complementary methods for ameliorating aging and why such interventions are appropriate based on our current historical anthropological philosophical ethical evolutionary and biological context Challenging concepts are presented together with in depth reviews and paradigm breaking proposals that collectively illustrate the potential for changing aging as never before The proposals extend from today to a future many decades from now in which the control of aging may become effectively complete Examples include sirtuin modulating pills new concepts for attacking cardiovascular disease and cancer mitochondrial rejuvenation stem cell therapies and regeneration tissue reconstruction telomere maintenance prevention of immunosenescence extracellular rejuvenation artificial DNA repair and full deployment of nanotechnology The Future of Aging will make you think about aging differently and is a challenge to all of us to open our eyes to the future therapeutic potential of biogerontology **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *New Insights into Thymic Functions during Stress, Aging, and in Disease Settings* Nicolai Stanislas van Oers, Dong-Ming Su, Ann Chidgey, Jarrod Dudakov, 2020-12-23 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office [frontiersin.org/about/contact](#) [Annual Review of Gerontology and Geriatrics, Volume 3, 1982](#), 1982-01-15 The second volume in this long running series presents the usual critical and intensive review chapters divided into five sections but also addresses particular topics of special interest including drugs and their use and misuse among the aged the nonmedication orientation to treatment of various disorders the immune system and clinical procedures in the management of urinary incontinence As with all the volumes the contributors represent an international array of leading experts **The Aging Immune System and Health** Valquiria Bueno, Rafael Solana, Annemieke Boots, 2020-01-15 The world population presents an increased percentage of individuals over 65 years old and the fastest growing subgroup is over 85 years old The

increase in life expectancy observed in the last century has not been synonymous with extra years lived in good health disability free years Population studies have shown that as individuals age they can present a great heterogeneity of ability and health Therefore aging has been associated for some individuals with disabilities and hospitalizations Deaths related to infectious pathogens are increased in the aging population mainly due to pneumonia and influenza whereas Cytomegalovirus Epstein Barr virus among other viruses seem to contribute to the low grade inflammatory process observed inflammaging Aging is a complex and multifactorial process in which functions of the organism are adjusted remodelled in order to deal with damaging events during life One of the most important changes in aging individuals occurs in the immune system innate and adaptive responses with consequences such as poor response to new infections and vaccinations increased susceptibility to cancer development and autoimmune diseases frailty and organ dysfunction In addition it has been proposed that immunosenescence not only reflects the aging of the organism but also contributes to this process Bone marrow presents decreased hematopoiesis the thymus undergoes involution and lymphoid organs lymph nodes spleen also present reduced functionality Therefore cells derived matured or residing in these tissues decline in number and function These changes have been identified in experimental models in vitro conditions peripheral blood and biopsies via biomarkers such as cell phenotype stimulus induced proliferation cytokines and antibodies levels Telomere length and telomerase activity also decline in bone marrow derived and peripheral blood cells and have been shown to play a role in immunosenescence More recently the investigation of short non coding RNA molecules microRNAs miRNAs pointed to this system as a possible control of aging related mechanisms Data obtained on these markers for aging individuals could lead to the generation of a marker panel for pathology prediction to indicate interventions and to evaluate the efficacy of interventions Interventions such as nutrition supplements exercise vaccination different dose concentration of antigen adjuvants have been proposed to circumvent age related diseases Considering the heterogeneity in the aging process further investigation is vital before the indication of interventions for aging individuals As the extension of life expectancy is a reality it is a challenge to understand how the aging population copes with the remodelling of the organism and how interventions could provide longevity in good health

Savino, F. Guaraldi, 2017-02-28 In the last decades several in vitro and in vivo studies have revealed the existence of a very complex network between the neuroendocrine and immune system Important molecular mechanisms underlying these interactions in both physiological and pathological conditions have also been described Indeed hormones play a pivotal role in the development and functional regulation of the immune system both innate and acquired responses Immune system cells present specific hormone receptors and themselves produce some hormones thus influencing hormone secretion More recently the modulation of hormone secretion has been attempted for treating associated autoimmune disorders further supporting the strong interplay between the endocrine and immune system Distinguished experts who have published extensively in their fields have contributed comprehensive chapters to this volume The focus is on the various aspects of endocrine neuro immune connections providing an updated panorama from basics to clinical applications of current knowledge and still debated issues **Reversibility of Chronic Degenerative Disease and Hypersensitivity, Volume 1** William J. Rea, Kalpana Patel, 2010-06-18 The clinical approaches to the chronic degenerative diseases that drain our resources and compromise our well being have become almost exclusively symptom focused The common wisdom is that they are idiopathic with final outcomes to be managed rather than prevented or cured That they are potentially reversible rarely enters into any discussion b **Hormones, Neurotransmitters, and T-Cell Development in Health and Disease** Wilson Savino, Daniella Areas Mendes-da-Cruz, Ana Rosa Pérez, Vincent Geenen, 2019-11-01 Thymus physiology and T cell homeostasis are controlled by hormones neurotransmitters cytokines and other factors that modulate stromal cell interactions influence thymocyte development and selection processes survival and migration between others In the context of this Research Topic on Hormones Neurotransmitters and T cell development in Health and Disease authors discuss the control of thymus physiology by glucocorticoids GC growth hormone GH and sex hormones norepinephrine NE and other molecules that seem impact upon thymocyte microenvironmental interactions like galectin 3 Gal 3 ephrins Eph extracellular matrix proteins and integrins like VLA 5 Moreover some of them draw attention to about how diverse maturation steps and or the interactions between stromal and thymocytes can be affected in pathological states like diabetes or infections As shown schematically in the figure this topic highlight the following notions 1 GH shows counterregulatory effects against GC rather than influence directly T cell homeostasis 2 Interactions between sex hormones and noradrenergic secretion may influence thymus homeostasis and involution 3 Gal 3 are crucial to thymocyte stromal cell interactions and influence thymic architecture Moreover Gal 3 seem to be involved in the regulation of steroidogenic pathway 4 Ephrins are crucial to assembly the thymic connections between thymocytes and the epithelial network but have a relative importance in supporting normal thymopoiesis 5 Pathologic situations like diabetes or infectious diseases caused by parasites or bacteria
