*The Role of Microenvironment in Axonal Regeneration* Christine C. Stichel-Gunkel,1997-06-19 Since the pioneering studies of Ramon y Cajal the inability of lesioned adult CNS axons to regenerate has been well established During the past years advancements in molecular cellular and biochemical knowledge have provided new insights into the extrinsic mechanisms underlying regeneration failure The rapid progress in this field has already led to the development of new concepts for therapeutic manipulations This book provides a comprehensive overview of structural and molecular changes induced by an invasive CNS lesion and their involvements in regeneration processes Moreover it demonstrates the strong growth promoting activities of implanted glial cells The data is discussed in relation to current knowledge on the mechanisms of axonal degeneration and regeneration and in terms of their relevance for the development of novel therapeutic strategies

**regeneration** Hui Lu,Wenchuan Zhang, Shizhang Ling, Bo-Zong Shao,Olga Aleinikova, Xiaofeng Yang,2025-02-17 Nerve regeneration refers to the regeneration or repair of nerve tissue cells or cell products This mechanism may include the production of new neurons glia axons myelin sheaths or synapses Nerve regeneration is clinically important because it is part

of the pathogenesis of many diseases Due to the high incidence of nerve damage nerve regeneration and repair are becoming a rapidly developing field The peripheral nervous system PNS and central nervous system CNS are involved in different functional mechanisms The peripheral nervous system has the intrinsic ability to repair and regenerate while the central nervous system largely lacks the ability to repair and regenerate itself Theories about nervous system regeneration still need to be studied Much research is still needed to optimize the environment to realize the regenerative potential of nerves
