Sedimentation And Tectonics In Alluvial Basins:

Sedimentation and Tectonics in Alluvial Basins. Edited by A.D. Miall, 1981 Principles of Sedimentary Basin Analysis Andrew D. Miall, 2013-06-29 Over the past five years there have been many advances in the field of basin analysis. Developments such as the publication of new stratigraphic codes, new research in fission track dating, evolution of thought regarding the importance of tectonic versus eustatic controls of regional and global cycles, and refinements of geophysically based basin subsidence models have necessitated the publication of a second edition of *Principles of Sedimentary Basin Analysis*. Like the first edition, this book emphasizes the stratigraphic evidence which geologists can actually see in outcrops, well records, and core samples, and can gather using geophysical techniques. *Principles of Sedimentary Basin Analysis* is both an excellent text for students and a practical handbook for professional geologists. **Sedimentation and Tectonics in Alluvial Basins** Andrew D. Miall, 1981 Paleozoic and Mesozoic tectonic evolution of central and eastern Asia Gregory Arlen Davis, Marc S., 2001. Hendrix geology U of Montana and Davis earth sciences U of Southern California present 19 articles detailing ground based work on the history of assembly and intracontinental deformation of central and eastern Asia. Chapters look at the structural, thermochronologic, and sedimentary records of the history of Paleozoic assembly in Mongolia and central and western China. Further information is presented on Mesozoic deformation in orogenic belts of central and eastern Asia. Asia's sedimentary basins are examined and the intracontinental deformation they record is documented. Many of these contributions, particularly the papers examining Mongolian geology, are the first ground based articles written in English. Annotation c. Book News, Inc. Portland, OR: booknews.com *Principles of Sedimentary Basin Analysis* Andrew Miall, 2013-04-17 This book is intended as a practical handbook for those engaged in the task of analyzing the paleogeographic evolution of ancient sedimentary basins. The science of stratigraphy and sedimentology is central to such endeavors, but although several excellent textbooks on sedimentology have appeared in recent years, little has been written about modern stratigraphic methods. Sedimentology textbooks tend to take a theoretical approach, building from physical and chemical theory and studies of modern environments. It is commonly difficult to apply this information to practical problems in ancient rocks, and very little guidance is given on methods of observation, mapping, and interpretation. In this book, theory is downplayed and the emphasis is on what a geologist can actually see in outcrops, well records, and cores, and what can be obtained using geophysical techniques. A new approach is taken to stratigraphy, which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming. There are also sections explaining principles of facies analysis, basin mapping methods, depositional systems, and the study of basin thermal history so important to the genesis of fuels and minerals. Lastly, an attempt is made to tie everything together by considering basins in the context of plate tectonics and eustatic sea level changes. *Tectonics of Sedimentary Basins* Cathy Busby, Antonio Azor Pérez, 2011-12-07 Investigating the complex interplay between tectonics and sedimentation is a key endeavor in modern

earth science Many of the world's leading researchers in this field have been brought together in this volume to provide concise overviews of the current state of the subject The plate tectonic revolution of the 1960's provided the framework for detailed models on the structure of orogens and basins summarized in a 1995 textbook edited by Busby and Ingersoll *Tectonics of Sedimentary Basins* Recent Advances focuses on key topics or areas where the greatest strides forward have been made while also providing on line access to the comprehensive 1995 book Breakthroughs in new techniques are described in Section 1 including detrital zircon geochronology cosmogenic nuclide dating magnetostratigraphy 3 D seismic and basin modelling Section 2 presents the new models for rift post rift transtensional and strike slip basin settings Section 3 addresses the latest ideas in convergent margin tectonics including the sedimentary record of subduction initiation and subduction flat slab subduction and arc continent collision it then moves inboard to forearc basins and intra arc basins and ends with a series of papers formed under compressional strain regimes as well as post orogenic intramontane basins Section 4 examines the origin of plate interior basins and the sedimentary record of supercontinent formation This book is required reading for any advanced student or professional interested in sedimentology plate tectonics or petroleum geoscience Additional resources for this book can be found at www.wiley.com/go/busby_sedimentarybasins

Gulf of Aden B.H. Purser, Dan Bosence, 1997-12-31 *Sedimentation and Tectonics in Rift Basins Red Sea Gulf of Aden* presents new case studies and synthesises the results of recent research on the sedimentological evolution of the Red Sea Gulf of Aden rift system This rift basin is generally regarded as the best natural geological laboratory in the world in which to study the processes of rift formation Uplift of the rift margins in an arid climate results in extensive three dimensional exposures of pre and syn rift strata and associated structures These serve as analogues for the understanding and hydrocarbon exploration of deeper buried rift systems on continental margins such as the North Sea and the Atlantic margins The Red Sea Gulf of Aden rift is also exceptional in that its stratigraphy spans all stages from pre rift environments syn rift continental to marine environments through the rift to drift transition to post rift sea floor spreading The work is arranged in eight sections following a review of the sedimentology and stratigraphy of rift basins the magmatism and structural evolution of the Red Sea Gulf of Aden rift is reviewed Subsequently new case studies are presented of the early rifting environment syn rift sedimentation tectonics and diagenesis evaporites and salt tectonics Post rift sediments of the axial trough are then discussed along with studies of reefs coastal zone and shelf sediments and the tectonic geomorphology of the rift margin escarpment This work results from extensive new research in the rift basin largely carried out under collaborative research projects by European and Middle Eastern geologists It will be an invaluable reference work for geoscientists in the hydrocarbon groundwater and mineral extraction industries as well as for researchers in university departments of earth

sciences mining and physical geography **Precambrian Sedimentary Environments** Wladyslaw Altermann, Patricia Corcoran, 2009-03-05 The motivation for this volume came from the idea that the Precambrian is the key both to the present and to the understanding of the Earth as a whole The Precambrian constitutes about 85% of Earth's history and of that about 3.75 billion years of Precambrian time represented by rocks are accessible to geoscientists Ancient atmospheric and environmental conditions can be traced back to the time when the Earth was only about 250 million years old Precambrian rocks supply almost 75% of important mineral resources such as Fe Mn Au Pt and Cr Many of these elements are associated with sedimentary rocks and some important hydrocarbon coal and graphite deposits are also hosted by Precambrian rocks This volume is aimed at geoscientists interested in Precambrian sedimentary rocks and at students of Earth history It contains review articles discussing Precambrian conditions and case studies from Precambrian shields and successions of North and South America Australia Africa Europe Asia and India The introductory papers written by experts on Precambrian environments treat comprehensively the application of actualism to the Precambrian the evolution and influence of life on the sedimentary rock record the genesis of Banded Iron Formations the Precambrian sulphur cycle and the significance of Precambrian chemical carbonate precipitates The case studies include depositional settings and processes in Archean terranes in Paleoproterozoic sequences with some emphasis on the lack of vegetation and weathering and in late Proterozoic sequences with some emphasis on glacial deposits The contributions demonstrate that Precambrian sedimentary deposits are commonly similar to their Phanerozoic counterparts in terms of composition sedimentary processes and depositional setting but may differ significantly as a result of lack of vegetation climatic and biological constraints composition and circulation of seawater and the secular involvement of continental crust Contains review articles discussing Precambrian conditions and case studies from Precambrian shields and successions of North and South America Australia Africa Europe Asia and India The introductory papers written by experts on Precambrian environments treat comprehensively the application of actualism to the Precambrian the evolution and influence of life on the sedimentary rock record the genesis of Banded Iron Formations the Precambrian sulphur cycle and the significance of Precambrian chemical carbonate precipitates Detailed case studies include depositional settings and processes in Archean terranes in Paleoproterozoic sequences with some emphasis on the lack of vegetation and weathering and in late Proterozoic sequences with some emphasis on glacial deposits Written for geoscientists interested in Precambrian sedimentary rocks and students of Earth history If you are a member of the International Association of Sedimentologists IAS for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP33> **Cenozoic Basins of the Death Valley Region** Lauren Albert Wright, Bennie Wyatt Troxel, 1999-01-01
