International Symposium on Experimental Robotics (8, 2002, Sant'Angelo, Ischia), 2004 *Intelligent Autonomous Systems 6* Enrico Pagello, 2000 After a long period in which the research focused mainly on industrial robotics nowadays scientists aim to build machines able to act autonomously in unstructured domains and to interface friendly with humans while performing intelligently their assigned tasks Such intelligent autonomous systems are now being intensively developed and are ready to be applied to every field from social life to modern enterprises We believe the following years will be increasingly characterised by their extensive use This is dramatically changing the whole scenario of human society **Underactuated Robotic Hands** Lionel Birglen, Thierry Laliberté, Clément M. Gosselin, 2007-12-23 Grasping and manipulation skills are at the core of the development of modern robotic systems With the introduction of robotics in new applications involving unstructured environments e g space undersea surgery intelligent manipulation and grasping has become a crucial research

area The authors have developed an internationally recognized expertise in this area Additionally they designed and built several prototypes which attracted the attention of the scientific community Their work was reported in several publications which appeared in the most renowned journals and conferences The purpose of this book is to summarize years of research and to present in an attractive format the expertise developed by the authors on a new technology for grasping namely under actuation which has achieved great success both in theory and in practice This book is not intended to be used as a textbook but could be used as a reference at the post graduate level

*Robotics and Cognitive Approaches to Spatial Mapping* Margaret E. Jefferies, Wai-Kiang Yeap, 2008-01-10 This important work is an attempt to synthesize two areas that need to be treated in tandem The book brings together the fields of robot spatial mapping and cognitive spatial mapping which share some common core problems One would expect some cross fertilization of research between the two areas to have occurred yet this has begun only recently There are now signs that some synthesis is happening so this work is a timely one for students and engineers in robotics

*Robot Navigation from Nature* Michael John Milford, 2008-02-11 This pioneering book describes the development of a robot mapping and navigation system inspired by models of the neural mechanisms underlying spatial navigation in the rodent hippocampus Computational models of animal navigation systems have traditionally had limited performance when implemented on robots This is the first research to test existing models of rodent spatial mapping and navigation on robots in large challenging real world environments

ROMANSY 16 Teresa Zielinska, Cezary Zielinski, 2013-11-22 The aim of this publication is to present the research results in robotics that are now state of the art and indicate the possible future lines of development To effectively work and cooperate with us robots must exhibit abilities that are comparable to those of humans The book describes the ongoing efforts to design and develop human friendly robotic systems that can safely and effectively interact and work with humans

*Spatial Representation and Reasoning for Robot Mapping* Diedrich Wolter, 2008-07-23 This book demonstrates benefits of abstract and qualitative reasoning that have not received much attention in the context of autonomous robotics before Bremen Christian Freksa December 2007 Director of the SFB TR 8 Spatial Cognition Preface This book addresses spatial representations and reasoning techniques for bile robot mapping providing an analysis of fundamental representations and processes involved A

spatial representation based on shape information is proposed and shape analysis techniques are developed to tackle the correspondence problem in robot mapping. A general mathematical formulation is presented to provide the formal ground for an efficient matching of configurations of objects. This book is a slightly revised version of my doctoral thesis submitted to the Faculty of Mathematics and Computer Science of the University of Bremen, Germany. Many contributed to the development of a dissertation but some of them stand out. Christian Freksa: I thank you for supporting and encouraging my work for introducing me to interdisciplinary work for giving me the freedom to develop this dissertation and for providing an enjoyable atmosphere to work in. Longin Jan Latecki: thank you for countless in-depth discussions helping me to develop and position my work for the fruitful collaboration and for making a research stay possible that has been very valuable to me. I thank the research groups in Bremen and Philadelphia for helpful discussions and feedback in particular Jan Oliver Wallgrün. I also thank Kai Florian Richter, Sven Bertel and Lutz Frommberger for feedback on this work. Robert Ross: thank you for helping to proof read this dissertation.
