Role Of Herpes Viruses In Atherogenesis

David P Hajjar, Stephen M Schwartz

Role Of Herpes Viruses In Atherogenesis:

Role of Herpesviruses in Atherogenesis David P Hajjar, Stephen M Schwartz, 1999-02-22 There is a growing body of evidence suggesting that the herpesvirus has a role in many vascular disorders Each chapter in this book discusses in detail the role that herpesviruses play in the pathophysiological processes related to cholesterol metabolism and intracellular trafficking cell proliferation matrix production and arterial tissue remodelling and thrombosis The contributors highlight a wide range of cellular processes focused on the potential role that herpesviruses may play in the etiology and development of cardiovascular disease from early childhood to adult stages of life

Viruses and Atherosclerosis Anton Kutikhin, Elena Brusina, Arseniy E. Yuzhalin, 2013-10-19 Will address an important yet underrepresented topic The correlation between viruses and atherosclerosis has been a focal point of the authors work for a number of years This volume will explore the relationship between different viral strains and atherosclerosis It will begin by describing the hypothesis and denoting the mechanisms of virus driven atherosclerosis then expanding on the subject by focusing on different virus strains from Herpes to Epstein Barr to the triad of Hepatitis viruses et al on a chapter by chapter basis While there are books albeit few that cover particular viral strains and their relationship to cardiovascular diseases this work will be unique in its scope by considering multiple strains of viruses making it a repository of information on the topic a truly comprehensive volume

Focus on Atherosclerosis

Research Leon V. Clark, 2004 Atherosclerosis is a degenerative condition in which arteries build up deposits called plaques atheromas which consist of lipids mainly cholesterol connective tissue and smooth muscle cells originating from the arterial wall Plaques develop quietly over a period of years and are unnoticeable until there is an interruption in the normal flow of blood Plaques may partially or totally block the blood s flow through an artery Two things that can happen where plaques occur are bleeding hemorrhage into the plaque and formation of a blood clot thrombus on the plaque s surface

Atherosclerosis affects large and medium sized arteries The type of artery and where the plaque develops varies with each person Atherosclerosis research has witnessed startling progress in recent years partially due to new drugs as well as to new breakthroughs in molecular medicine

Molecular Aspects of Human Cytomegalovirus Diseases Yechiel Becker, E.-S. Huang, Gholamreza Darai, 2012-12-06 In this book the current knowledge on human cytomegalovirus HCMV as a human pathogen is lucidly summarized bringing the reader fully up to date with current knowledge concerning HCMV and all the known clinical and medical aspects of diseases caused by and associated with HCMV The book is divided into four parts I Human cytomegalovirus and human diseases II human cytomegalovirus infections and the immunocompromised host III diagnosis treatment and prevention of human cytomegalovirus and human diseases and IV molecular aspects of human cytomegalovirus Each part is put together from chapters written by experts in the respective fields providing basic medical and molecular knowledge in addition to more specific understanding of HCMV infections

Nutrition and Biotechnology in

Heart Disease and Cancer John B. Longenecker, David Kritchevsky, Marc K. Drezner, 2012-12-06 There is a unique nutritional commonality developing in research relating to coronary heart disease and cancer The primary aim of this conference was to provide a forum for the leading researchers clinicians educators and administrators in these two fields to present a program on heart disease and cancer which included a the major historical milestones b the present areas of greatest interest in research and therapy c the latest nutritional molecular and biotechnological advances and d a perspective on the most promising areas for future research and therapy Scientists have long contended that research marches on the feet of methodology Thus there are numerous examples of research fields opening secondary to methodological advances Some examples are 1 thin layer and gas liquid chromatography which along with high pressure liquid chromatography have broadened the line of advances in lipid research and 2 peR and the resultant impact on molecular biological approaches to several fields of science The organizers of this conference thought the time was propitious for bringing together knowledge on newer aspects of molecular biological research with current advances in the two major areas of degenerative disease coronary heart disease and cancer Our knowledge of these killer diseases has expanded greatly in the past few years and the advance has been catalyzed by use of an array of molecular biological techniques Thanks to these medical thinking in these areas is changing from considerations of treatment to strategies for prevention **The role of the immune system in the pathogenesis of diabetic complications**

Gabriel Virella, Maria Lopes-Virella, 2014-12-03 The main causes of morbidity and mortality in diabetes are macrovascular and microvascular complications including atherosclerosis nephropathy and retinopathy As the definition of atherosclerosis as a chronic smoldering inflammatory disease has gained general acceptance the attention of researchers has focused on the triggers of chronic vascular inflammation The oxidation and other forms of modification of lipids and lipoproteins have emerged as a major pathogenic factor in atherosclerosis with a significant interaction with the immune system Modified lipoproteins by themselves are proinflammatory through the activation of the innate immune system as a consequence of the interaction with scavenger receptors and or toll like receptors expressed by a variety of cell types including phagocytic cells and dendritic cells A variety of modified forms of LDL mLDL including oxidized malondialdehyde modified and Advanced Glycation End product modified LDL induce autoimmune responses in humans Those modifications seem enhanced in diabetes and the progression of atherosclerosis is accelerated in diabetic patients The immune response to all forms of mLDL results in both activation of T cells in the arterial wall and in an autoimmune response characterized by the formation of IgG antibodies Both arms of the immune response are believed to play a role in vascular inflammation While the cell response is likely to activate resident macrophages the humoral immune response results in the production of IgG antibodies that bind to specific epitopes in modified forms of LDL generate immune complexes both intra and extravascularly and those complexes are able to activate the classical pathway of the complement system as well as phagocytic cells via Fc receptors In vitro studies suggest that the pro inflammatory activity of immune complexes containing

mLDL is several fold higher than that of the modified LDL molecules by themselves Clinical studies have provided significant support to the pathogenic role of immune complexes containing modified LDL in the development of atherosclerotic complications in patients with both type 1 and type 2 diabetes At the same time there is increasing evidence that the formation of immune complexes containing modified forms of LDL may also be involved in the pathogenesis of diabetic nephropathy and retinopathy These are areas in which more research is needed to fully understand the pathogenic mechanisms activated by those immune complexes Of interest is the fact that animal models have suggested the possibility of modifying the adaptive humoral immune response in ways that would result in slowing down and perhaps prevent the atherosclerotic process This possibility is sufficiently alluring as to justify increased research efforts both in animal models including diabetic animals and translational clinical studies The manipulation of the T regulatory population is another area of potential translational impact which has hardly been explored Indeed at this point of time what seems to be a high priority is an increased and open interchange of information among investigators trying to reach a better general understanding and integration of knowledge generated from a variety of approaches and perspectives This Research Topic provided an optimal platform for this open interchange of information We encouraged interested scientists to submit mini reviews methods papers review articles perspectives and original research articles covering this topic in all its diversity to facilitate the communication of perspectives and new information between scientists interested in understanding the multiple implications of the involvement of the immune system in the pathogenesis of diabetic complications

Human Herpesviruses HHV-6A, HHV-6B and HHV-7 Louis Flamand, Irmeli Lautenschlager, Gerhard Krueger, Dharam Ablashi, 2014-02-11 Completely revised and updated Human Herpesviruses HHV 6A HHV 6B HHV 7 Third Edition delivers a contemporary and thorough review of HHV 6 beginning with foundational explorations of classification molecular biology and chromosomal integration of the virus through to clinical details including pathologic features of infection and clinical effects on various organ systems The work now includes coverage of HHV 7 a virus that remains underestimated in transplant reactivation seizures and encephalitis The book examines the role of HHV 6 in myriad diseases including cognitive disorders following bone marrow transplant mesial temporal lobe epilepsy multiple sclerosis autoimmune disease encephalitis Hodgkin s disease lymphoma HHV 6B and glioma HHV 6A Descriptions of current and novel molecular and serological diagnostic assays along with detailed protocols are included to aid researchers and clinicians in discriminating potential false positives originating from chromosomally integrated HHV 6 and in differentiating between active and latent infection Human Herpesviruses HHV 6A HHV 6B HHV 7 Third Edition is a valuable reference for both clinical and basic scientists including epidemiologists virologists practicing clinicians infectious disease specialists pathologists and all scientists entering the field of herpes virus research The work is a practical and thorough resource for a foundational understanding of HHV 6 and HHV 7 while providing a cutting edge translational and clinical reference to those looking to understand and diagnose associated viral diseases Delivers the latest

Pathophysiology and Clinical Applications of Nitric Oxide Gabor M. Rubanyi, 2003-09-02 Research on the key mediator nitric oxide has increased exponentially over the last ten years It is now clear that in addition to its role within the cardiovascular system this mediator is also implicated in the normal physiological function and disease pathology of several organs and systems A number of the fundamental research observations are now being developed into therapeutic principles and these are being pursued through clinical trials This is the first work summarizing in its two volumes the quantum leap from basic science to clinical applications emerging from this decade of research

Inflammatory and Infectious Basis of Atherosclerosis Jay L. Mehta, 2012-11-19 In the last ten years major strides have been made in defining the presence and role of inflammation in atherosclerosis as well as in injury to the tissues that occurs after episodes of ischemia and reperfusion In sixteen chapters written by world renowned individuals from different countries the role of inflammation and different mediators in the pathogenesis of atherosclerosis is presented The significance of inflammation and possible therapeutic implications is also described in depth This book is of great interest for a wide range of physicians researchers and scientists who may want to study more and develop the concept of inflammation and atherosclerosis

Atherosclerosis and Autoimmunity Yehuda Shoenfeld, D. Harats, G. Wick, 2001-02-27 Presenting further studies in the prevention and treatment of coronary artery disease this book brings together the knowledge accrued in the past decade concerning the role of immunity in the initiation and perpetuation of atherosclerosis A strong group of international contributors summarize the diverse aspects of the interrelationship between the immune system and atherosclerosis

Atherosclerosis: Diet and Drugs Arnold Eckardstein, 2005-11-02 Cardiovascular diseases continue to be the leading cause of death in the majority of industrialized countries The most frequent underlying pathology namely atherosclerosis and its clinical sequelae namely coronary heart disease cerebrovascular disease and peripheral artery disease remain common although for a long time we have been made aware of avoidable or modifiable etiological factors such as smoking fat rich diet or lack of exercise and although these adverse lifestyle factors have been extensively addressed by population wide primary prevention programs Cardiovascular morbidity and mortality also remain high despite successful anti hypertensive and lipid lowering drug therapies which help to reduce cardiovascular morbidity and mortality by about 30% in both secondary and tertiary prevention settings This can partly be explained by the increasing life expectancy and growing proportion of elderly people especially in Europe and North America In addition the World Health Organization makes the alarming prediction that probably in response to the spreading of western dietary behavior and lack of exercise resulting in an increasing prevalence of diabetes dyslipidemia and hypertension cardiovascular diseases rather than infectious diseases will become the most

frequent cause of death worldwide This volume of the Handbook of Experimental Pharmacology entitled Atherosclerosis is divided into four parts and intends to give an overview on the pathogenesis of atherosclerosis established treatment and prevention regimen and of perspectives for the development of new treatment modalities *Research Awards Index* ,1989
