Economics of Energy Security Honorata Nyga-Łukaszewska, 2023-12-01 There has been a burgeoning interest in energy security in recent years due to the transformation of the energy landscape through deepening market deregulation rising environmental challenges growing energy hunger and significant political changes Depicting energy security as an evolving concept that absorbs economic and political conditions this book adopts an economic approach to energy security in the international gas market Uniquely the book explores the theoretical assumptions and practical consequences attached to

both demand and supply side security in global energy markets It investigates why energy exporters are so protective of independence in energy exports The book also looks at the critically important issue of environmental aspects of energy security particularly around climate change It also analyses the potential for a cartel in the international gas market similarly to the oil industry This book will be of much interest to readers in energy economics energy security energy policy IR security studies and relevant policy makers *The Future of Energy Consumption, Security and Natural Gas* Kari Liuheto, 2021-08-23 This book analyses the recent development of liquefied natural gas LNG in the Baltic Sea region and how energy security in the region has improved after Finland Lithuania Poland Russia and Sweden have constructed their LNG import terminals In addition to these LNG receiving units the book deals with the major pipeline projects such as Baltic Pipe Balticconnector Nord Stream 2 and Gas Interconnection Poland Lithuania and their impact on energy security of the Baltic Sea region This book will be of interest to experts specialising in European energy markets and energy security *Energy Security* Sanam S. Haghighi, 2007-08-31 This book offers the first comprehensive assessment of the various internal and external measures undertaken by the European Union to guarantee security of oil and gas supply It sets out and analyses in a coherent and thorough manner those aspects of EU external policy that are relevant in establishing a framework for guaranteeing energy security for the Union What makes the book unique is that it is the first of its kind to bridge the gap between EU energy and EU external policy The book discusses EU policy towards the major oil and gas producing countries of Russia the Mediterranean and the Persian Gulf at the bilateral as well as regional and multilateral level It brings together not only the dimensions of trade and investment but also other important aspects of external policy namely development and foreign policy The author argues that the EU's energy security cannot be achieved through adopting a purely internal approach to energy issues but that it is necessary to adopt a holistic approach to external policy covering efficient economic relations as well as development co operation and foreign policies towards energy producing countries The book will be a valuable resource for students of EU law WTO law or international energy law as well as scholars and practitioners dealing with energy issues [Export Pipelines from the CIS Region](#) Andreas, 2014-04-15 This timely collection offers fresh perspectives to the analysis of the New Great Game the fight for access to the Caspian Sea region's energy resources To date the export of the Caspian crude oil and natural gas has only been assessed geopolitically which oversimplifies the political dynamics of the region and neglects to acknowledge the Caspian countries as actors in their own right *The Palgrave Handbook of Natural Gas and Global Energy Transitions* Damilola S. Olawuyi, Eduardo G. Pereira, 2022-05-04 The Palgrave Handbook of Natural Gas and Global Energy Transitions provides an in depth and authoritative examination of the transformative implications of the ongoing global energy transitions for natural gas markets across the world With case studies from Africa Asia Europe North America Latin America South America Australia and the Middle East the volume introduces readers to the latest legal policy technological and fiscal innovations in natural gas markets in response to ongoing global energy transitions It outlines

the risk mitigation strategies and contractual techniques focusing on resilience planning low carbon business models green procurement climate smart infrastructure development accountability gender justice and other sustainability safeguards that are required to maximize the full value of natural gas as a catalyst for a just and equitable energy transition and for energy security across the world Written in an accessible style this book outlines the guiding principles for a responsible and low carbon approach to the design financing and implementation of natural gas development and commercialization It is an indispensable text and reference work for students scholars practitioners and stakeholders in natural gas energy infrastructure and environmental investments and projects

Energy Supply Security and the Southern Gas Corridor
Erdal Tanas Karagöl, Salihe Kaya, 2014-10-15 This analysis focuses on the concept of energy supply security and SGC project that have been developed to provide energy supply security with Turkmenistan Iran KRG and the East Mediterranean

Environmental Security of the European Cross-Border Energy Supply Infrastructure M.G. Culshaw, V.I. Osipov, S.J. Booth, A.S. Victorov, 2015-01-05 The current volume provides examples of how environmental hazards such as landslides earthquakes mountain processes cold climate processes and tidal flows and currents can affect the energy supply infrastructure In times of uncertainty the security of the European cross border energy supply infrastructure such as pipelines has great importance Whilst the potential effects of political disagreement economic inequalities and social differences are relatively well understood the impact of environmental change is often poorly appreciated by decision makers New approaches have been examined for monitoring of hazardous landslide processes including early warning systems and near real time 3D data processing and visualization The scientific problems of environmental systems design have been discussed and approaches for their implementation have been suggested New integrated remote sensing techniques consisting mainly of hyperspectral and radar imagery are presented together with the processing of monitoring data using GIS techniques and in particular dynamic visualization Attention is also given to conceptual issues of environmental and energy security and the role of education to help resolve environmental problems through cooperation in the development of the European energy supply infrastructure

The New Politics of Energy Security in the European Union and Beyond
Andrea Prontera, 2017-05-18 Combining theoretical reflections and empirical insights from paradigmatic case studies in the area of external energy governance pipeline politics Liquefied Natural Gas development and offshore petroleum policy and politics this ground breaking study demonstrates that a distinctive and new politics of energy security is definitively emerging in the European Union Innovative not only in regard to the case studies presented which include the Caspian region the Baltic Mediterranean countries Central Asia and EU Russia relations but also in regard to the analytical framework adopted an International Political Economy approach informed by an historical institutional perspective the book challenges the common view of the depoliticisation of energy security supported by the mainstream market approach and the power politics and zero sum game view supported by the geopolitical perspective This book places the study of EU energy politics in

the broader evolving context of global energy markets and explores the complex interactions between EU and national political dynamics and between energy security and environmental concerns at the local level

Energy Security for the EU in the 21st Century José María Marín Quemada, Javier García-Verdugo, Gonzalo Escribano, 2012-03-12 Recent developments like the rising trend in crude oil price the international economic crisis the civil revolts in Northern Africa and the Middle East the nuclear threat in Japan after the tsunami the oil spill in the Gulf of Mexico and the economic growth of emerging countries like China and India have a direct relation to the security of energy supply anywhere in the world This book provides a comprehensive analysis of energy risks energy scenarios and energy policies with special reference to the European Union and its member states emphasizing the economic and geopolitical dimensions of energy security The book assesses both quantitatively and qualitatively the socioeconomic and political risks related to the European energy supply together with the EU s energy relations with other countries Two innovative indicators have been developed to estimate geopolitical energy risks and energy related relations with other countries The book also examines the process of convergence of member states energy security policies the path towards a common European energy policy and the process of Europeanization projected towards the energy corridors through which the EU receive energy imports In addition alternative strategic scenarios related to energy risk are assessed Finally guidelines for the EU s energy policy and new strategies using energy corridors are suggested in order to maximize EU s energy security The book should be of interest to students and researchers across a wide range of subjects including energy economics and policy energy and foreign policy in the EU energy policies in EU member states and several aspects related to international political economy

Handbook of Energy Governance in Europe Michèle Knodt, Jörg Kemmerzell, 2022-09-21 This Handbook provides the most comprehensive account of energy governance in Europe examining both energy governance at the European level and the development of energy policy in 30 European countries Authored by leading scholars the first part of the book offers a broad overview of the topics of energy research including theories of energy transitions strategies and norms of energy policy governance instruments in the field and challenges of energy governance In the second part it examines the internal and external dimensions of energy governance in the European Union The third part presents in depth country studies which investigate national trajectories of energy policy including an analysis of the policy instruments and coordination mechanisms for energy transitions It closes with a comparative analysis of national energy governance This book is a definitive resource for scholars in energy and climate research as well as decision makers in national governments and EU institutions

The Protection of Critical Energy Infrastructure Against Emerging Security Challenges Alessandro Niglia, 2015-10-15 Critical energy infrastructure such as oil and gas pipelines storage facilities and electricity grids are increasingly becoming the target of criminal and terrorist attacks This book contains the papers presented at the NATO Advanced Research Workshop ARW The Protection of Critical Energy Infrastructure against Emerging Security Challenges held in Tbilisi Georgia in

November 2014 The main objective of this ARW was to investigate the security risks to critical energy infrastructure namely cyber and terrorist attacks as well as to identify opportunities for public private partnerships to meet these risks The workshop served as a forum for experts and stakeholders from government academia and the private sector to exchange information and best practice and to produce findings and recommendations for integrated security solutions involving close cooperation between public and private stakeholders Underlining the importance of a holistic approach to European energy security this book will be of interest to all those involved in protecting critical energy infrastructure from a diverse range of threats

Natural Gas Michael J. Bradshaw, Tim Boersma, 2020-04-23 Is natural gas the bridge to our low carbon future In power generation industrial processes parts of the transportation sector and for domestic use natural gas still has the potential to play a greater role in various energy transition pathways around the world But such a future is by no means certain In this book Michael Bradshaw and Tim Boersma offer a sober and balanced assessment of the place of natural gas in the global energy mix today and the uncertainties that cloud our understanding of what that role may look like in the future They argue that natural gas has become prominent in recent decades spurred by two revolutions the first has been the rise of unconventional natural gas production and the second the coming of age of the market for liquefied natural gas LNG However a third revolution is required to secure natural gas long term role in various energy transition pathways as countries are increasingly pushing to address air quality concerns and curtail greenhouse gas emissions This revolution has to take place as politicians citizens investors and shareholders are becoming increasingly vocal about the need to improve the environmental footprint of the fuel while simultaneously and perhaps paradoxically demand for it continues to grow in a world where geopolitical challenges seem to be mounting

Energy as a Weapon United States. Congress. House. Committee on Government Reform. Subcommittee on Energy and Resources, 2007

The New Politics of Strategic Resources David Steven, Emily O'Brien, Bruce D. Jones, 2014-11-21 Since 2008 energy and food markets those most fundamental to human existence have remained in turmoil Resource scarcity has had a much bigger global impact in recent years than has been predicted with ongoing volatility a sign that the world is only part way through navigating a treacherous transition in the way it uses resources Scarcity and perceptions of scarcity increase political risks while geopolitical turmoil exacerbates shortages and complicates the search for solutions The New Politics of Strategic Resources examines the political dimensions of strategic resource challenges at the domestic and international levels For better or worse energy and food markets are shaped by perceptions of national interest and do not behave as traditional market goods So while markets are an essential part of any response to tighter resource supplies governments also will play a key role David Steven Emily O'Brien Bruce Jones and their colleagues discuss what those roles are and what they should be The architecture for coordinating multilateral responses to these dynamics has fallen short raising questions about the effective international management of these issues Politics impede here too as the major powers must negotiate political and security trade offs to

cooperate on the design of more robust international regimes and mechanisms for resource security and the provision of global public goods This timely volume includes chapters on major powers United States India China and key suppliers Russia Saudi Arabia The contributors also address thematic topics such as the interaction between oil and state fragility the changing political dynamics of climate change and the politics of resource subsidies **Research Handbook on EU**

Energy Law and Policy Rafael Leal-Arcas,2024-09-06 This thoroughly revised second edition presents a comprehensive overview of the most important contemporary research in EU energy law and policy The Research Handbook brings together a diverse array of experts highlighting the multifaceted nature of this continually developing field Energy Outlook for

Asia and the Pacific 2009 Asian Development Bank,2009-10-01 This report attempts to project the balance between energy demand and supply for the 48 regional members of the Asian Development Bank However due to the unavailability of energy data the Marshall Islands the Federated States of Micronesia and Tuvalu are not included in the study The outlook results are presented by member by subregion and by region Based on the projected energy demand and supply carbon dioxide emissions and investment requirements are derived These will offer a basis for policy making and development planning geared toward sustainable economic development in the regional members in Asia and the Pacific *THE EU'S ENERGY*

SUPPLY SECURITY: OPTIONS FOR GAS SUPPLY DIVERSIFICATION AND THE ROLE OF TURKEY ERAY ERBİL,2018-06-27

With the gas disruptions to the European Union in 2006 and 2009 Ukrainian crises the Community decided to diversify its supply sources and routes develop energy infrastructure between the member states and increase energy efficiency to strengthen energy security of the Union The book will examine the possibility of nine countries as being an alternative to Russian gas and it will analyze Turkey s role in transmitting gas from the Caspian the Middle East and the Mediterranean regions to Europe **Establishing Security and Stability in the Wider Black Sea Area** Peter M. E. Volten,Blagovest

Tashev,2007 In this publication possible ways to promote security cooperation in the Wider Black Sea Area are being addressed The area holds major importance for Euro Atlantic security Strategically located at the crossroads of Europe the Middle East and Central Asia the region after the dual NATO EU enlargement in 2004 2007 became part of the periphery of the common Euro Atlantic security system with critical value for European energy security and the war on terrorism The region faces a variety of security challenges including regional conflicts ethnic strife terrorism and powerful organized crime while many of the countries have weak institutions turbulent political systems unstable economies and lack of democracy In addition the traffic of drugs to the West the steady stream of militancy from the Middle East and the energy lines from the oil and gas rich regions of the East to an energy hungry Europe gradually define the Wider Black Sea Area as a region urgently requiring political attention and investment in its security This publication is intended to provide fresh ideas on the possible areas of security cooperation even as the authors agreed that comprehensive far reaching policies are hard to attain in the near future
