and geodynamical phenomena Since 1986 Dr Lichtenegger's main interest is dedicated to GPS Dr Collins retired from the U S National Geodetic Survey in 1980 where he was the Deputy Director For the past ten years he has been deeply involved in using GPS technology with an emphasis on surveying Dr Collins was the founder and president of Geo Hydro Inc My own background is theoretically oriented My first chief Prof Dr Peter Meissl was an excellent theoretician and my former chief Prof DDDDr Helmut Moritz fortunately still is

Navstar Global Positioning System Integrated Logistics Support Plan: Space and operational control system segments, 1985 Using the Navstar Global Positioning System as a Global Timing System, 1981 The Navstar Global Positioning System GPS although primarily designed for three dimensional position and velocity determination is uniquely capable of providing highly accurate and stable timing information to users This capability is derived from the time delay pseudo ranging concept which forms the basis for GPS navigation The combination of navigation and timing together in one system will make GPS the Precise Time and Time Interval PTTI source of choice for the foreseeable future Only GPS can supply continuous timing data world wide in any weather to a dynamically moving user at a previously unsurveyed site with submicrosecond accuracy traceable to an established reference This paper discusses the application of Navstar GPS to the problems of PTTI dissemination A short review of the GPS concept leads to a detailed description of the implementation of time transfer through Navstar GPS Time is followed from the U S Naval Observatory USNO through the ground control satellite and receiving segments of GPS to the user's clock system The three options by which a user's system can receive from the GPS receivers currently under development by the DOD are defined in detail The electrical digital mechanical interface parameters along with suggested methods for their use are outlined for each option A detailed error model is also presented for the traceability of UTG GPS to UTC USNO Although absolute accuracy of UTC GPS provided to a user is specified to be slightly over 100 nanoseconds rms substantially better accuracies can be easily achieved By understanding and working around some of the GPS error uncertainties real time synchronization between stationary users on the same continent can be controlled to within a few nanoseconds and absolute post processed time offset with UTC USNO measured within 25 nanoseconds or better
