Ventricular Tachycardias E. Aliot, Ralph Lazzara, 2012-12-06 The rhythm of the heart its normal functioning and pathologic disturbances has been a favored subject of investigation by clinical and basic scientists in recent decades This heightened interest and attention was stimulated by the somber and surprising revelations from epidemiologists and pathologists of the enormity of the number of sudden arrhythmic deaths in the Western world and the concurrent advancement of technology for recording and control of electrical activity of the heart Technological advancements have included the recording of intracellular potentials from cardiac cells the recording of intracardiac extra cellular potentials generated by specific cardiac structures simultaneous recordings from numerous sites with computer processing for spatial mapping of activation or potential variations with time high gain high resolution recordings with signal averaging for detecting potentials of low amplitudes complex stimulation protocols various high energy stimulation modes intracellular voltage control of multicellular preparations and single cardiac cells and the isolation of single cardiac cells for electrophysiological study The interest and technology have produced an increasing bounty of information and understanding acceptable solutions to some clinical problems and definite progress toward solutions to other problems Progress in research in electrophysiology and arrhythmias has been reviewed and highlighted in various meetings and books in recent years Because the body of information has become so large general overviews of the field have necessarily been superficial in certain aspects or have contained gaps *Cardiac Arrhythmias : Practical Notes on Interpretation and Treatment* David H Bennett, 2006-09-29 Cardiac Arrhythmias is a long established and widely respected guide to the interpretation and treatment of cardiac rhythm disorders Acting as a practical handbook to dip into when required and also as a comprehensive textbook it covers the basics and detail of cardiac arrhythmias at a realistic level without overwhelming the reader with unnecessary Medical and Surgical Management of Tachyarrhythmias W. Bircks, F. Loogen, H.D. Schulte, L. Seipel, 2012-12-06 The first cardiovascular operation in Duesseldorf a ligation of an open ductus arteriosus Botallo was performed in 1938 by E K Frey During the Second World War and the subsequent years many difficulties hindered cardiovascular surgery in Duesseldorf However it was resumed on 3 May 1949 by Prof Ernst Derra again by ligating an open ductus arteriosus This

was the starting point of the successful cooperation between the cardiological and surgical working groups the birthday of the Duesseldorf Heart Centre Further highlights in cardiac surgery were the introduction of open heart surgery by means of surface cooling hypothermia 9 February 1955 and extracorporeal circulation 21 February 1959 In addition to cardiac catheterization and surgery in patients with acquired and congenital heart disease the diagnosis and treatment of arrhythmias was one of the focal points of the centre On 3 October 1961 the first pacemaker was implanted in a patient with a third degree AV block after he had been treated using an external device for about 1 year In recent years interest has increasingly turned to the tachy arrhythmias Close cooperation between the medical and surgical teams made possible the application of new pacing techniques for the treatment of tachycardia In patients with intractable arrhythmias surgical interventions were made to eliminate the focus of the arrhythmia In the past 2 years intraoperative electrophysiologic studies endocardial and epicardial mapping were applied to enhance the success of the surgical procedures Practical Cardiac Pacing Paul C.
