Pain And Neuroimmune Interactions:

Pain and Neuroimmune Interactions Nayef E. Saadé, Suhayl J. Jabbur, A. Vania Apkarian, 2012-12-06 For those of us involved in research on the neural mechanisms that relate tissue damage to pain it is becoming more evident that the sensation of pain and suffering could be considered as part of a mechanism that involves not only sizeable areas in the brain but also simultaneous activations of the immune and the endocrine systems as well. A consensus is growing among specialists in the field that pain involves the sharing of molecular mechanisms between the nervous immune and endocrine systems that can interact at peripheral and ultimately central levels. Furthermore, chronic pain could then be looked upon as a corollary of the imbalance in the cross talk between these systems which could lead to new treatment strategies. The aim of this book is not to deal with acute pain that serves as an alarm signal but to attempt to explain the molecular mechanisms of chronic pains considered as a multifactorial syndrome or disease. *Neuroimmune Interactions in Pain* Ru-Rong Ji, Jianguo Cheng, Jasmine Ji, 2023-05-05

As lifespans increase more people around the world find themselves victims of chronic pain. In spite of this, treatment options continue to be severely limited. Anti-inflammatory drugs can only do so much while painkillers like opioids have led to crippling addictions and fatal overdoses. The subject of the book is the role of immune cells including glial cells and neuroimmune interactions in chronic pain. The book begins by examining the preclinical and clinical evidence supporting the involvement of non-neuronal cells in chronic pain. It discusses the interactions between non-neuronal cells and neurons in the regulation of chronic pain. It then presents the implications of these findings including promising and emerging treatments such as specialized pro-resolving mediators (SPMs) such as resolvins and protectins, immune cell therapy and complementary and alternative medicine as well as neuromodulation and regenerative medicine which may prove to be the turning point for hundreds of millions of patients world-wide who struggle to escape from the shadow of chronic pain. The book presents ground-breaking research that will alter current perspectives on chronic pain. **Neuroimmune**

Interactions Branislav D. Janković, Branislav M. The international leaders in this field have been brought together to create this pioneering text, each contributing from their area of expertise. The result is a comprehensive yet accessible interdisciplinary introduction to psychoneuroimmunology which also takes you further than the foundations of those fascinating topics by covering the most recent research in HIV/AIDS, autoimmune diseases and the reactivation of latent herpes viruses. Attention is also given to the effects of behavior such as physical exercise, sleep, acute and chronic stress and conditioning of immune functions in animals and humans. The whole is brought together with a wealth of cited research studies and over 200 illustrations. *An Introduction to Pain and its relation to Nervous System Disorders*
