**Integration of Fundamental Polymer Science and Technology** L. A. Kleintjens,2012-12-06 Integration of Fundamental Polymer Science and Technology is a theme that admits of countless variations It is admirably exemplified by the scientific work of R Koningsveld and C G Vonk in whose honour this meeting was organized The interplay between pure and applied is of course not confined to any particular subdiscipline of chemistry or physics witness the name IUPAC and IUPAP but is perhaps rarely so intimate and inevitable as in the macromolecular area The historical sequence may vary when

the first synthetic dye was prepared by Perkin considerable knowledge of the molecular structure was also at hand but polymeric materials both natural and synthetic had achieved a fair practical technology long before their macromolecular character was appreciated or established Such historical records have sometimes led to differences of opinion as to whether the pure or the applied arm should deserve the first place of honour The Harvard physiologist Henderson as quoted in Walter Moore s Physical Chemistry averred that Science owes more to the steam engine than the steam engine owes to Science On the other hand few would dispute the proposition that nuclear power production could scarcely have preceded the laboratory observations of Hahn and Strassmann on uranium fission Whatever history may suggest an effective and continuous working relationship must recognize the essential contributions if not always the completely smooth meshing of both extremes

**Characterisation** B.J. Hunt,M.I. James,2012-12-06 Polymers continue to play an ever increasing role in the modern world In fact it is quite inconceivable to most people that we could ever have existed of the increased volume and variety of materials without them As a result currently available and the diversity of their application characterisation has become an essential requirement of industrial and academic laboratories involved with polymeric materials On the one hand requirements may come from polymer specialists involved in the design and synthesis of new materials who require a detailed understanding of the relationship between the precise molecular architecture and the properties of the polymer in order to improve its capabilities and range of applications On the other hand many analysts who are not polymer specialists are faced with the problems of analysing and testing a wide range of polymeric materials for quality control or material specification purposes We hope this book will be a useful reference for all scientists and techno or industrial laboratories logists involved with polymers whether in academic and irrespective of their scientific discipline We have attempted to include in one volume all of the most important techniques Obviously it is not possible to do this in any great depth but we have encouraged the use of specific examples to illustrate the range of possibilities In addition numerous references are given to more detailed texts on specific subjects to direct the reader where appropriate The book is divided into II chapters
