Lipps,Philip W. Signor,2013-11-21 Several years ago we realized that the most prominent ideas that had been expressed about the origin and early evolution of the Metazoa seemed to have been developed chiefly by zoologists using evidence from modern species without reference to the fossil record Paleontologists had in fact put forth their own ideas but the zoological and the paleontological evidence were about the problem seldom considered together especially by zoologists We believed that the paleontological documentation of the first Metazoa was too scattered too obscure to Western readers and much of it too recent to have been readily available to our colleagues in zoology Whether or not that was entirely true we thought that a single volume reviewing the fossil record of the earliest Metazoa would be useful to many in both paleontology and zoology especially since so much new information has been developed in the last few years Some of this information has been summarized in general articles recently but an overview of most of the field does not exist We therefore organized this book in five parts so that the evidence could be placed in perspective and summarized and inferences made from it Part I introduces the previous hypotheses that have been proposed for the origin and early radiation

of Metazoa Part II consists of two summary chapters that set the sedimentological geochemical and biological background to the known radiations of Metazoa
