Patterns of Discovery in the Social Sciences Paul Diesing, Social scientists are often vexed because their work does not satisfy the criteria of scientific methodology developed by philosophers of science and logicians who use the natural sciences as their model. In this study Paul Diesing defines science not by reference to these arbitrary norms delineated by those outside the field but in terms of norms implicit in what social scientists actually do in their everyday work. *Patterns of Discovery in the Social Sciences* is a detailed and systematic report on the full range of methods and procedures as they are actually practiced. Neither a how to do it handbook nor a lofty philosophical treatise, this is a truly interdisciplinary study of the basic modes of procedure in scientific inquiry with a special emphasis on normative politics. Diesing treats scientific methods as inductive logics of discovery in continuous evolution. He emphasizes the variety of methods available, discusses the advantages and disadvantages of specific methods, and in particular provides an account of mathematical modeling and of participant observation. The book will be of immense interest to all working social scientists, graduate students in any of the social science disciplines, and philosophers of science. It can also be employed as a text or supplement in courses in sociological methods and philosophy of science. This book is also a noteworthy companion to Diesing's major work on *Science and Ideology in the Policy Sciences*. Paul Diesing is professor emeritus of political science at the State University of New York at Buffalo. He did his graduate studies in philosophy from the University of Chicago and has taught at that university, the University of Illinois, and the University of Colorado. Diesing has also been a faculty associate at the Buffalo Center for International Conflict Studies, where he participated in the Center's program of researching in bargaining theory and international crises. He is the author of *Reason in Society: Five Types of Decisions and Their Social Conditions* and *Science and Ideology in the Policy Sciences*.

Connections H. Peter Alesso, Craig F. Smith, 2008-01-14. In their fascinating analysis of the recent history of information technology, H. Peter Alesso and Craig F. Smith reveal the patterns in discovery and innovation that have brought us to the present tipping point. A generation from now, every individual will have personally tailored access to the whole of knowledge; the sooner we all begin to think about how we got here and where we're going the better. This exciting book is an essential first step. From the Foreword by James Burke. Many people envision scientists as dispassionate characters who slavishly repeat experiments until eureka; something unexpected happens. Actually, there is a great deal more to the story of scientific discovery, but seeing the big picture is not easy. *Connections: Patterns of Discovery* uses the primary tools of forecasting and three archetypal patterns of discovery: Serendipity, Proof of Principle, and 1% Inspiration and 99% Perspiration, to discern relationships of past developments and synthesize a cohesive and compelling vision for the future. It challenges readers to think of the consequences of extrapolating trends such as Moore's Law to either reach real machine intelligence or retrench in the face of physical limitations. From this perspective, the book draws the big
