Interactions in Context Jesper Kjeldskov, 2022-05-31 This book presents a contextual approach to designing contemporary
interactive mobile computer systems as integral parts of ubiquitous computing environments Interactive mobile systems
services and devices have become functional design objects that we care deeply about Although their look feel and features
impact our everyday lives as we orchestrate them in concert with a plethora of other computing technologies these artifacts
are not well understood or created through traditional methods of user centered design and usability engineering Contrary to
more traditional IT artifacts they constitute holistic user experiences of value and pleasure that require careful attention to
the variety complexity and dynamics of their usage Hence the design of mobile interactions proposed in this book transcends
existing approaches by using the ensemble of form and context as its central unit of analysis As such it promotes a designerly
way of achieving convergence between form and context through a contextually grounded wholeness sensitive and
continually unfolding process of design Table of Contents Acknowledgments Introduction Mobile Computing Interaction
