**Control of Metabolic Processes** Athel Cornish-Bowden, Maria Luz Cárdenas, 2013-11-22 THIS BOOK collects together papers given at a NATO Advanced Research Workshop held at Il Ciocco Lucca Italy from the 9th to the 15th April 1989 It sets out to present the current state of understanding of the principles governing the way fluxes and concentrations are maintained and controlled in metabolic systems Although this is a topic that has held the interest of biochemists for many years it is only quite recently that the methods of analysing the kinetics of multi enzyme pathways developed over the past two decades have come to be widely discussed or applied experimentally Many biochemists remain sceptical that the new methods offer a real advance except in complexity over the landmark discoveries of the 1950s and 1960s relating to inhibition of enzymes at branch points by the end products of metabolic pathways and the interpretation of allosteric effects and cooperativity Even those who have become convinced that the classical ideas provide only the starting point for understanding metabolic control have been by no means unanimous in their assessment of the direction in which one should advance In this book we have tried to include all of the current points of view including the view that the classical theories tell us all that we need to know We have not seen it as our role as editors to paper over the cracks that exist and to pretend that we can speak to the world with one voice
