

REINFORCEMENT: POSITIVE & NEGATIVE

OPERANT CONDITIONING

A theory developed by B.F. Skinner in 1937 asserts that behavior is “controlled by its consequences.” Consequences include reinforcement (increasing a behavior) and punishment (decreasing a behavior). This sheet explores **REINFORCEMENT**.

GOAL

Both positive and negative reinforcement can be used to motivate kids and promote desired behaviors. Understanding how to use reinforcement to support healthy growth and development is key! **Stimuli must only be added or subtracted AFTER the desired behavior is performed.**

MISCONCEPTIONS

Negative reinforcement is often mistaken for punishment and positive reinforcement is often mistaken for bribery. If reinforcement is used correctly, neither of those are true.

POSITIVE

A desired behavior leads to the **addition** of a favorable stimulus.

Example: A parent praises a child for finishing their homework. “Well done!”

The behavior generates the addition of a favorable stimulus (praise).

NEGATIVE

A desired behavior leads to the **subtraction** of an unfavorable stimulus.

Example: A teacher tells a hard-working class that they will not have homework over the weekend because they performed well during the school week.

The behavior generates the subtraction of an unfavorable stimulus (weekend homework).

EXAMPLES

After the desired behavior:

- high five (+)
- praise (+)
- sticker (+)
- playground (+)
- break from chores (-)
- end a time out (-)
- cessation of nagging (-)
- reduced homework (-)

TALK ABOUT IT!

Collaborate with kids to understand what kind of things motivate them, but be careful not to fall into an unsustainable reward cycle by using stimuli that are too elaborate or impractical.
