Apocryphal Science Neil DeRosa,2004 This book is a review of extraordinary new hypotheses that might reasonably be characterized as dissenting science It spotlights the principal scientists world class thinkers all who have proposed these theories and the difficulties they encountered in their conclusions challenges to existing paradigms By laying out these theories in terms that any intelligent reader can understand they become accessible to the non specialist who is then able to evaluate them on their

merits **Virus Mania** Torsten Engelbrecht, Claus Köhnlein, Samantha Bailey, Stefano Scoglio, 2021-04-22 The book *Virus Mania* has been written with the care of a master craftsman courageously evaluating the medical establishment the corporate elites and the powerful government funding institutions Wolfgang Weuffen MD Professor of Microbiology and Infectious Epidemiology The book *Virus Wahn* can be called the first work in which the errors frauds and general misinformations being spread by official bodies about doubtful or non virus infections are completely exposed Gordon T Stewart MD professor of public health and former WHO advisor The population is terrified by reports of so called COVID 19 measles swine flu SARS BSE AIDS or polio However the authors of *Virus Mania* investigative journalist Torsten Engelbrecht Dr Claus Köhnlein MD Dr Samantha Bailey MD and Dr Stefano Scoglio BSc PhD show that this fearmongering is unfounded and that virus mayhem ignores basic scientific facts The existence the pathogenicity and the deadly effects of these agents have never been proven The book *Virus Mania* will also outline how modern medicine uses dubious indirect lab tools claiming to prove the existence of viruses such as antibody tests and the polymerase chain reaction PCR The alleged viruses may be in fact also be seen as particles produced by the cells themselves as a consequence of certain stress factors such as drugs These particles are then picked up by antibody and PCR tests and mistakenly interpreted as epidemic causing viruses The authors analyze all real causes of the illnesses named COVID 19 avian flu AIDS or Spanish flu among them pharmaceuticals lifestyle drugs pesticides heavy metals pollution malnutrition and stress To substantiate it the authors cite dozens of highly renowned scientists among them the Nobel laureates Kary Mullis Barbara McClintock Walter Gilbert and Sir Frank Macfarlane Burnet as well as microbiologist and Pulitzer Prize winner Ren Dubos and it presents more than 1 400 solid scientific references The topic of *Virus Mania* is of pivotal significance Drug makers and top scientists rake in enormous sums of money and the media boosts its audience ratings and circulations with sensationalized reporting the coverage of the *New York Times* and *Der Spiegel* are specifically analyzed The enlightenment about the real causes and true necessities for prevention and cure of illnesses is falling by the wayside For more reviews see the older edition of *Virus Mania Dogmatism in Science and Medicine* Henry H. Bauer, 2014-01-10 The nature of scientific activity has changed dramatically over the last half century and the objectivity and rigorous search for evidence that once defined it are being abandoned Increasingly this text argues dogma has taken the place of authentic science This study examines how conflicts of interest both institutional and individual have become pervasive in the science world and also explores the troubling state of research funding and flaws of the peer review process It looks in depth at the dominance of several specific theories including the Big Bang cosmology human caused global warming HIV as a cause of AIDS and the efficacy of anti depressant drugs In a scientific environment where distinguished experts who hold contrary views are shunned this book is an important contribution to the examination of scientific heterodoxies **Athanor (2001)** S. Disease and Democracy Peter Baldwin, 2005. A historical masterpiece. Just when we thought we knew everything about the politics and policies of the HIV/AIDS pandemic, Peter Baldwin surprises us with innovative insights about the sharp differences in policy among countries, as well as complex tradeoffs between civil liberties and public goods. This is a refreshing and readable book in which AIDS is used as a lens to understand the public health enterprise, ranging from leprosy and syphilis to tuberculosis and SARS. Baldwin offers a deeply historical and comparative understanding of HIV in the industrialized world. Lawrence O. Gostin, author of *Public Health Law: Power, Duty, Restraint*. Although a vast literature has emerged to chronicle and reflect on the history of the AIDS epidemic since it was first reported almost a quarter of a century ago, there is nothing like Peter Baldwin's probing and synthetic analysis of AIDS in the industrialized world. Building on his masterful *Contagion and the State in Europe, 1830-1930*, Baldwin has provided a complex historical tapestry of how an epidemic threat has challenged and exposed democracies that thought infectious threats a thing of the past. Ronald Bayer, author of *Private Acts: Social Consequences, AIDS, and the Politics of Public Health*, and coauthor with Gerald Oppenheimer of *AIDS: Doctors' Voices from the Epidemic*.

The Crisis of the Human Sciences Thorsten Botz-Bornstein, 2011-09-22. Centralization and over-professionalization can lead to the disappearance of a critical environment capable of linking the human sciences to the real world. The authors of this volume suggest that the humanities need to operate in a concrete cultural environment able to influence procedures on a *hic et nunc* basis and that they should not entirely depend on normative criteria whose function is often to hide ignorance behind a pretentious veil of value neutrality.

objectivity In sociology the growth of scientism has fragmented ethical categories and distorted discourse between our inner and outer selves while philosophy is suffering from an empty professionalism current in many philosophy departments in industrialized and developing countries where boring ahistorical and nonpolitical exercises are justified through appeals to false excellence In all branches of the humanities absurd evaluation processes foster similar tendencies as they create a sterile atmosphere and prevent interdisciplinarity and creativity Technicization of theory plays into the hands of technocrats The authors offer a broad range of approaches and interpretations reaching from philosophy of education to the re evaluation of business models for universities Broadcasting and the NHS in the Thatcherite 1980s Patricia Holland,2013-07-26

Patricia Holland offers a fascinating study of the ways in which changes to public services and shifts in the concept of the public under Margaret Thatcher s three Conservative governments were mediated by radio and television in the 1980s

Why Trust Science? Naomi Oreskes,2021-04-06 Why the social character of scientific knowledge makes it trustworthy Are doctors right when they tell us vaccines are safe Should we take climate experts at their word when they warn us about the perils of global warming Why should we trust science when so many of our political leaders don t Naomi Oreskes offers a bold and compelling defense of science revealing why the social character of scientific knowledge is its greatest strength and the greatest reason we can trust it Tracing the history and philosophy of science from the late nineteenth century to today this timely and provocative book features a new preface by Oreskes and critical responses by climate experts Ottmar Edenhofer and Martin Kowarsch political scientist Jon Krosnick philosopher of science Marc Lange and science historian Susan Lindee as well as a foreword by political theorist Stephen Macedo Ibss: Sociology: 1998 Compiled by the British Library of Political and Social Science,1999-12-16 Renowned for its international coverage and rigorous selection procedures this series provides the most comprehensive and scholarly bibliographic service available in the social sciences Arranged by topic and indexed by author subject and place name each bibliography lists and annotates the most important works published in its field during the year of 1997 including hard to locate journal articles Each volume also includes a complete list of the periodicals consulted Colossal Control Failures Jack P. Gibbs,2015-11-17 This fascinating book analyzes 13

control failures in human history from Robespierre s promotion of the French Revolution to Hoover s efforts to stop the Great Depression to the intelligence failures of 9 11 Assessing the causes of 10 additional historical cases the author s comparative analysis shows how each leadership failure was caused by an expansion of the range of control attempts their scope and or their diversity A leader s or other actor s attempts to broaden the range of control targets have been most important in causing great human failures The analysis is timely during an era when war global warming and other vexing problems plague our society *A Future for Africa* Emmanuel M. Katongole,2017-05-09 Civil war famine genocide AIDS the peoples of Africa have endured horrific human tragedies Those crises plus widespread economic political and social instability have combined to produce what some consider a dire and nearly hopeless situation Even as this book was going to press the

leaders of the G 8 nations were meeting to talk about what could be done to aid Africa in these critical times A careful look at history would indicate that the answer must come from within Africa and from the African people themselves not from other nations or the economic programs and solutions they propose The rapid rise of a Christian social ethics movement as an alternative perspective focused precisely on addressing Africa s challenges using the spiritual resources of its own people is providing a hopeful solution and a timely and powerful coping mechanism for African peoples One of the leaders of this movement is Emmanuel Katongole a Catholic priest from Uganda In *A Future for Africa* Katongole wrestles with concrete problems like the AIDS epidemic and widespread military conflicts as well as fundamental systemic ones like poverty corruption and tribalism He then offers faith filled solutions based on the power and example of Christian community and Christian moral imagination Katongole s radical message is that a political ethic based on Christian principles as taught in the Scriptures is the necessary foundation for healing reconciliation and rebuilding the continent

The Origin, Persistence and Failings of HIV/AIDS Theory Henry H. Bauer, 2007-05-09 This work challenges the belief that HIV is the cause of AIDS Among the many topics explored are the failings of HIV testing statistical evidence that HIV is not a sexually transmitted disease and problems caused by the differing diagnostic criteria for AIDS around the world

Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler s own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves

AIDS Tamara L. Roleff, 2003 Authors present a wide range of opinions on what policies should be adopted for HIV testing what methods should be used to control the spread of AIDS and what the treatments of AIDS should be
