Positivity in Algebraic Geometry II R.K. Lazarsfeld, 2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover edition as Vols 48 and 49 in the series *Ergebnisse der Mathematik und ihrer Grenzgebiete*

Sirakov, Paulo Ney De Souza, Marcelo Viana, 2019-02-27 The Proceedings of the ICM publishes the talks by invited speakers at

the conference organized by the International Mathematical Union every 4 years It covers several areas of Mathematics and it includes the Fields Medal and Nevanlinna Gauss and Leelavati Prizes and the Chern Medal laudatios A Course in Real Algebraic Geometry Claus Scheiderer,2024-09-12 This textbook is designed for a one year graduate course in real algebraic geometry with a particular focus on positivity and sums of squares of polynomials The first half of the book features a thorough introduction to ordered fields and real closed fields including the Tarski Seidenberg projection theorem and transfer principle Classical results such as Artin s solution to Hilbert s 17th problem and Hilbert s theorems on sums of squares of polynomials are presented in detail Other features include careful introductions to the real spectrum and to the geometry of semialgebraic sets The second part studies Archimedean positivstellens tze in great detail and in various settings together with important applications The techniques and results presented here are fundamental to contemporary approaches to polynomial optimization Important results on sums of squares on projective varieties are covered as well The last part highlights applications to semidefinite programming and polynomial optimization including recent research on semidefinite representation of convex sets Written by a leading expert and based on courses taught for several years the book assumes familiarity with the basics of commutative algebra and algebraic varieties as can be covered in a one semester first course Over 350 exercises of all levels of difficulty are included in the book **Certificates of Positivity for Real Polynomials** Victoria Powers,2021-11-26 This book collects and explains the many theorems concerning the existence of certificates of positivity for polynomials that are positive globally or on semialgebraic sets A certificate of positivity for a real polynomial is an algebraic identity that gives an immediate proof of a positivity condition for the polynomial Certificates of positivity have their roots in fundamental work of David Hilbert from the late 19th century on positive polynomials and sums of squares Because of the numerous applications of certificates of positivity in mathematics applied mathematics engineering and other fields it is desirable to have methods for finding describing and characterizing them For many of the topics covered in this book appropriate algorithms computational methods and applications are discussed This volume contains a comprehensive accessible up to date treatment of certificates of positivity written by an expert in the field It provides an overview of both the theory and computational aspects of the subject and includes many of the recent and exciting developments in the area Background information is given so that beginning graduate students and researchers who are not specialists can learn about this fascinating subject Furthermore researchers who work on certificates of positivity or use them in applications will find this a useful reference for their work *Algebraic Geometry: Salt Lake City 2015* Tommaso de Fernex,Brendan Hassett,Mircea Mustață,Martin Olsson,Mihnea Popa,Richard Thomas,2018-06-01 This is Part 1 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential

summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come

Griffiths with Commentary Phillip Griffiths, Maurizio Cornalba, 2003 Containing four parts such as Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems that are organized according to the subject matter this title provides the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century

Emerging Applications of Algebraic Geometry Mihai Putinar, Seth Sullivant, 2008-12-10 Recent advances in both the theory and implementation of computational algebraic geometry have led to new striking applications to a variety of fields of research The articles in this volume highlight a range of these applications and provide introductory material for topics covered in the IMA workshops on Optimization and Control and Applications in Biology Dynamics and Statistics held during the IMA year on Applications of Algebraic Geometry The articles related to optimization and control focus on burgeoning use of semidefinite programming and moment matrix techniques in computational real algebraic geometry The new direction towards a systematic study of non commutative real algebraic geometry is well represented in the volume Other articles provide an overview of the way computational algebra is useful for analysis of contingency tables reconstruction of phylogenetic trees and in systems biology The contributions collected in this volume are accessible to non

experts self contained and informative they quickly move towards cutting edge research in these areas and provide a wealth of open problems for future research Algebraic Geometry and Number Theory Hussein Mourtada,Celal Cem Sarioğlu,Christophe Soulé,Ayberk Zeytin,2017-05-07 This lecture notes volume presents significant contributions from the Algebraic Geometry and Number Theory Summer School held at Galatasaray University Istanbul June 2 13 2014 It addresses subjects ranging from Arakelov geometry and Iwasawa theory to classical projective geometry birational geometry and equivariant cohomology Its main aim is to introduce these contemporary research topics to graduate students who plan to specialize in the area of algebraic geometry and or number theory All contributions combine main concepts and techniques with motivating examples and illustrative problems for the covered subjects Naturally the book will also be of interest to researchers working in algebraic geometry number theory and related fields **Forty Years Of Algebraic Groups,**
