**Vegetable Processing** Wim Jongen, 2002-08-13 Fruit and vegetables are both major food products in their own right and key ingredients in many processed foods. There has been growing research on their importance to health and techniques to preserve the nutritional and sensory qualities desired by consumers. This major collection summarises some of the key themes in this recent research. Part one looks at fruit, vegetables and health. There are chapters on the health benefits of increased fruit and vegetable consumption, antioxidants and improving the nutritional quality of processed fruits. Part two considers ways of managing safety and quality through the supply chain. A number of chapters discuss the production of fresh fruit and vegetables, looking at modelling the use of HACCP systems and ways of maintaining postharvest quality. There are also two chapters on instrumentation for measuring quality. Two final chapters look at maintaining the safety and quality of processed fruit and vegetables. Part three reviews technologies to improve fruit and vegetable products. Two chapters consider how to extend the shelf life of fruits and vegetables during cultivation. The following three chapters then consider how postharvest handling can improve quality, covering minimal processing, new modified atmosphere packaging techniques and the use of edible coatings. Two final chapters discuss two major recent technologies in processing fruit and vegetables: high pressure processing and the use of vacuum technology. With its distinguished editor and international team of contributors, *Fruit and vegetable processing* provides an authoritative review of key research on measuring and improving the quality of both fresh and processed fruits and vegetables. Reviews recent research on improving the sensory, nutritional and functional qualities of fruit and vegetables, whether as fresh or processed products. Examines the importance of fruits and vegetables in processed foods and outlines techniques to preserve the nutritional and sensory qualities desired by consumers. Discusses two major technologies in processing fruits and vegetables: high pressure processing and the use of vacuum technology. **Bulletin - Division of Agricultural Sciences, University of California**, 1905 **Postharvest**

Beverages Elke Arendt, Fabio Dal Bello, 2011-04-28 Gluten Free Cereal Products and Beverages is the only book to address gluten free foods and beverages from a food science perspective. It presents the latest work in the development of gluten free products including description of the disease, the detection of gluten and the labeling of gluten free products as well as exploring the raw materials and ingredients used to produce gluten free products. Identifying alternatives to the unique properties of gluten has proven a significant challenge for food scientists and for the 1% of the world's population suffering from the immune-mediated enteropathy reaction to the ingestion of gluten and related proteins commonly known as Celiac Disease. This book includes information on the advances in working with those alternatives to create gluten free products including gluten free beer, malt and functional drinks. Food scientists developing gluten free foods and beverages, cereal scientists researching the area and nutritionists working with celiac patients will find this book particularly valuable. Written by leading experts presenting the latest developments in gluten free products. Addresses Coeliac Disease from a food science perspective. Presents each topic from both a scientific and industrial point of view. *Functional Properties of Food*

Noureddine Benkeblia, 2024-09-09 The elapsing time from producer to consumer has significantly increased as a result of food marketing and trade globalization. Consequently, maintaining quality along the food value chain is becoming a significant challenge. Postharvest losses are considered a major component of food loss and waste in the supply chain from farmers to consumers due to improper handling, storage, transport, preservation techniques and spoilage. Postharvest science aims to extend the shelf life of fresh and perishable commodities and to reduce heavy losses, thereby contributing to food security. While significant progresses have been made in postharvest preservation and shelf life extension, the continuous development of emerging technologies has changed our vision on postharvest science. Furthermore, recent advancements in molecular engineering of horticultural crops for quality improvement, the development of genomics, transcriptomics, proteomics and metabolomics have led to a better understanding of the physiology and the biochemistry of the senescence processes, resulting in better preservation and improved production of fresh crops. This two-volume work focuses on innovative technologies that extend and preserve shelf life of fruits and vegetables. Volume 1 offers a review on the state of the art, modern technologies in the postharvest field. The accompanying Volume 2 explores advanced and novel technologies after

harvest particularly the application of nanotechnologies to packaging materials      Sensory Evaluation Practices Herbert Stone, Joel L. Sidel, 2004-03-19 The enjoyment of products is closely related to the senses and in the case of food mainly taste aroma and texture Sensory evaluation is a dynamic field concentrating on the utilization of humans for the measurement of sensory perceptions and or their effect on food and taste acceptance Since 1985 when the first edition of this book was published there have been many changes in the field of sensory evaluation Sensory Evaluation Practices Third Edition provides a critical evaluation of all current developments in the field recognizing the impact that the discipline has had within academic circles in business and the relationships between research developments and their applications This new edition takes into consideration the impact of data processing systems as well as the internet and its implications for the future of sensory evaluation Appeals to sensory experts both in academia and business Discovered new optimization is based on integration of sensory descriptive and consumer research data New sensory information with imagery
