 particular reference to the choice of investigative techniques advances in the understanding of the underlying
 pathophysiology treatment and rehabilitation **Diseases of the Spinal Cord** Edmund Critchley,Andrew Eisen,2012-12-06
 The spinal cord is a long structure consisting of white and grey matter that not only serves to provide a neural connection
 between the brain and the body but also contains neural circuits that are organized segmentally and that are responsive to
 central and peripheral sensory input Thus the spinal cord is capable of some behavioural activity that is of clinical
 significance and that is more evident when higher modulation is disturbed The released activity of spasticity and the
 disturbances of bladder and bowel control that occur in patients with spinal cord lesions are examples The spinal cord is well
 protected within its bony canal but is nonetheless susceptible to compression by degenerative joint or bone disease or by
 neoplasm Spinal cord compression is a common clinical problem that is not always easy to recognize However it is
 particularly important because of the good results of appropriate treatment and the unfortunate consequences should the
 diagnosis be missed Many other medical and surgical disorders affect the spinal cord including vascular disease decom-
 pression sickness degenerative disorders and multiple sclerosis In this book Dr Critchley and Dr Eisen and their col-
 laborators chosen for their expertise and experience in spinal cord disorders have gathered together descriptions of the symp-
 toms and signs of spinal cord disease **Postgraduate Paediatric Orthopaedics** Sattar Alshryda,Stan Jones,Paul A.

Biomechanics: Basic and Applied Research Georg Bergmann,R. Kölbel,A.
