Postharvest Technology of Horticultural Crops : Fresh-Cut and Processed Horticultural Products Marita I. Cantwell, Diane M. Barrett, 2023-12-21 Fresh cut products are estimated to account for about 18 to 20 percent of the value of fresh fruit and vegetables marketed through retail and food service channels in the United States From salad mixes to baby carrots broccoli and cauliflower florets to slaw mixes these products continue to grow in popularity with consumers For the consumer fresh cut fruit and vegetables offer several potential benefits They can reduce meal preparation time provide more uniform quality and increase access to healthy produce For the processor successful fresh cut products can actually be more cost effective because of reduced waste for the end user Concerns about fresh cut products include their variable shelf life the need for temperature control microbial food safety and inconsistent overall product quality including flavor and nutrition Whereas most food processing techniques stabilize products and lengthen their storage and shelf life fresh cut processing increases

the perishability of fruit and vegetables This volume addresses the physiology of fresh cut fruits and vegetables treatments for maintaining quality optimal storage temperatures and modified atmospheres The chapter on processed products covers the principles of horticultural crop preservation the importance of raw material quality and common unit operations and technologies used for processing horticultural crops The advantages and disadvantages of various technologies are addressed followed by general information on packaging and quality control Postharvest Technology of Horticultural Crops: Atmospheric Environment Elizabeth J. Mitcham, Adel Kader, Michael S. Reid, Mikal Saltveit, 2023-12-21 Drawing on the expertise of the University of California's Postharvest Technology Center this publication discusses commercial uses of modified or controlled atmosphere technology which can be used during transport temporary storage or long term storage of horticultural commodities destined for the fresh market or processing In modified atmospheres and controlled atmospheres gases are removed or added to create an atmospheric composition around a commodity that is different from that of air Modified or controlled atmosphere technology can be used during transport temporary storage or long term storage of horticultural commodities destined for the fresh market or processing Chapter 1 discusses how modified or controlled atmosphere technology can be used during transport temporary storage or long term storage of horticultural commodities destined for the fresh market or processing Chapter 2 discusses the ways biologically important gases are sampled analyzed and mixed Since the rate of respiration of plant tissue is tightly coupled to its overall metabolic rate and often inversely proportional to shelf life the measurement and control of respiration are of vital interest in devising strategies to maintain quality after harvest Chapter 3 discusses the role of Ethylene in the postharvest life of many horticultural crops Sometimes this role is beneficial promoting faster and more uniform ripening before retail distribution and sometimes it is deleterious speeding senescence and reducing shelf life This chapter addresses the properties of this gas and ways to both harness its beneficial effects and avoid undesirable results during the postharvest handling of perishable commodities Post Harvest Technology of Horticultural Crops K.
