First Births in America Ronald R. Rindfuss, S. Philip Morgan, C. Gray Swicegood, 2023-11-15 This book explores the shifting patterns of parenthood in the United States over the past century focusing on the timing of first births and the social economic and cultural factors that influence these decisions It highlights the concurrent bloom and bust in fertility trends where the number of older parents has increased while the rates of childlessness have also risen primarily due to delays in childbearing among younger people Through an examination of historical trends the book considers how factors such as education religion and socioeconomic status influence when individuals choose to become parents It also compares American fertility patterns with those of other developed nations particularly Japan to show how different cultural contexts shape reproductive behavior The study takes a life course perspective emphasizing how early life experiences and broader social contexts affect decisions about when to start a family The book provides a detailed analysis of fertility trends from both macro and micro levels using a variety of data sources including surveys and longitudinal studies It also investigates the consequences of delayed childbearing

childlessness and the timing of parenthood on family dynamics career trajectories and social roles In doing so the book offers insights into the complex interplay between individual choices and societal influences and discusses the implications for future demographic and social change This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1988

Dynamics of Values in Fertility Change Richard Leete,1999-04-01 The global transformation in the number of children women bear has been one of the most remarkable changes in social behaviour in the twentieth century The search for explanations of the causes in childbearing behaviour and particularly in the values attached to children remains a central research preoccupation of population scientists This book explores the dimensions of values identified as significant in their impact on fertility decisions It offers a range of perspectives on a mosaic of values perceived to be of importance in influencing the bearing and caring of children The book examines the macro and micro theories of the value of children and considers the multi dimensional nature of value change The chapters explore the nature of the mechanisms by which value change may serve to reinforce or promote the ideational essence of change and the impact of pressures for change It is observed that gender religion and culture all function as complementary lenses through which the necessity of value maintenance or modification is viewed The book concludes that fertility behaviour is value driven but that fertility change is not necessarily driven by value change The values of most significance to fertility are more fundamental and general values rather than explicit fertility values Proceedings , **Area Studies (Regional Sustainable Development Review)**
