The Future Is Not What It Used to Be Jörg Friedrichs, 2013-08-16 In this book Jörg Friedrichs argues that industrial society itself is transitory and he examines the prospects for our civilization's coming to terms with its two most imminent choke points climate change and energy scarcity He offers a thorough and accessible account of these two challenges as well as the linkages between them

Friedrichs contends that industrial civilization cannot outlast our ability to burn fossil fuels and that the demise of industrial society would entail cataclysmic change including population decreases Publisher's description *Humans versus Nature* Daniel R. Headrick, 2019-12-02 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment *Humans versus Nature* tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past

Productivity: a Selected Annotated Bibliography, 1977 **Inventing the Industrial Revolution** Christine MacLeod, 2002-05-09 This book examines the development of the English patent system and its relationship with technical change during the period between 1660 and 1800 when the patent system evolved from an instrument of royal patronage into one of commercial competition among the inventors and manufacturers of the Industrial Revolution It analyses the legal and political framework within which patenting took place and gives an account of the motivations and fortunes of patentees who obtained patents for a variety of purposes beyond the simple protection of an invention It includes the first in depth attempt to gauge the reliability of the patent statistics as a measure of inventive activity and technical change in the early part of the Industrial Revolution and suggests that the distribution of patents is a better guide to the advance of capitalism than to the centres of inventive activity It also queries the common assumption that the chief goal of inventors was to save labour and examines contemporary criticism of the patent system in the light of the changing conceptualisation of invention among natural scientists and political economists

The Global Economic System I. Wallace, 2002-09-26 Provides a unique treatment of world economic geography as a whole and examines the principle philosophies that have shaped our study of it identifies the importance of the biophysical as well as cultural and political environments
