Annual Report of the Meteorological Office Argentina. Dirección General de Meteorología, Geofísica e Hidrología, 1892 **Uranus** Jay T. Bergstralh, Ellis D. Miner, Mildred Shapley Matthews, 1991-09-01 Uranus occupies a unique niche in the history of western thought for while the planets from Mercury to Saturn had been known since pre antiquity Uranus was the first to be discovered in 1781 through scientific investigation Contemporary investigation of Uranus culminated in the Voyager 2 encounter in 1986 The results of that achievement as well of concurrent research on the planet are reviewed by 84 international authorities in this massive volume Because Uranus remoteness has prevented its being studied as intensively by earth based observation as have other members of the solar system most of what is known about the planet its magnetic field and magnetosphere and satellites were learned from the Voyager data which is viewed here from a variety of perspectives While the book is intended to serve as a comprehensive review it also reports a substantial amount of original research results not previously published **Comparative Planetology with an Earth Perspective** Moustafa T. Chahine, Michael F. A'Hearn, Jürgen H. Rahe, 2013-04-17 The systematic study of the planets has experienced a slow but

steady progress from the efforts of a single individual Galileo Galilei 1564 1642 to nations that individually and collectively create whole agencies and complex infrastructures devoted to the exploration and understanding of our solar system This quest for knowledge continues in earnest today as we attempt to understand Earth's unique place among its closest neighbors Known diversities emphasize fractionation processes that may have occurred in the nebula during early solar system formation and the vastly different evolutionary paths taken by the planets and their satellites The discovery of similarities and differences among the planets has given rise to a discipline of Comparative Planetology Here terrestrial properties and giant planet atmospheres are viewed and probed surface geologies are related to atmospheres and oceans interior structures are envisioned magnetic fields mapped and bizarre differences in satellites and ring systems continue to enlighten amaze and confound the detectives of planetary science A science organizing committee with international participation was formed to develop a conference program to address the basic issues and the fundamental processes that are common among the planets The goals of the meeting were twofold first the production of a reference source on comparative planetology for academia and second the provision of an impetus for NASA to begin a program devoted to this emerging science discipline The conference program accommodated seventeen invited papers and nineteen poster presentations Geobulletin Geological Society of South Africa,1989 Quarterly news bulletin Kwartaallikse nuusbuletin

Carleton,2013-03-07 *Synoptic and Dynamic Climatology* provides the first comprehensive account of the dynamical behaviour and mechanisms of the global climate system and its components together with a modern survey of synoptic scale weather systems in the tropics and extratropics and of the methods and applications of synoptic climate classification It is unrivalled in the scope and detail of its contents The work is thoroughly up to date with extensive bibliographies by chapter It is illustrated with nearly 300 figures and plates Part 1 provides an introduction to the global climate system and the space time scales of weather and climate processes followed by a chapter on climate data and their analysis Part 2 describes and explains the characteristics of the general circulation of the global atmosphere and includes the nature and causes of global teleconnection patterns Part 3 discusses synoptic weather systems in the extratropics and tropics and satellite based

climatologies of synoptic features It also describes the applications of synoptic climatology and summarises current climatic research and its directions **Mars** Viorel Badescu, 2009-12-07 th th Mars the Red Planet fourth planet from the Sun forever linked with 19 and 20 Century fantasy of a bellicose intelligent Martian civilization The romance and excitement of that fiction remains today even as technologically sophisticated robotic orbiters landers and rovers seek to unveil Mars secrets but so far they have yet to find evidence of life The aura of excitement though is justified for another reason Mars is a very special place It is the only planetary surface in the Solar System where humans once free from the bounds of Earth might hope to establish habitable self sufficient colonies Endowed with an insatiable drive focused motivation and a keen sense of exploration and adventure humans will undergo the extremes of physical hardship and danger to push the envelope to do what has not yet been done Because of their very nature there is little doubt that humans will in fact conquer Mars But even earth bound extremes such those experienced by the early polar explorers may seem like a walk in the park compared to future experiences on Mars
