*Recent Advances in Upper Extremity Arthroplasty*, 1997      *Recent Advances In Upper Extremity Arthroplasty - Proceedings Of The Brussels International Upper Extremity F* Schuind, Kai-Nan An, 1997-03-31 While joint replacements at the lower extremity particularly at the hip and knee are performed on a daily basis in most departments of Orthopaedics with great clinical success and long longevity of the implant the indications are much less frequent at the upper limb Basic research follows the same tendency while there are numerous basic or clinical research projects devoted to the hip or knee very scarce reports are published on upper extremity joint replacements The aims of publishing this volume are to promote the exchange of ideas and to foster collaborative investigations among clinicians manufacturers engineers and other basic scientists involved with the problems of replacement arthroplasty in upper extremity joints from the finger to the shoulder The specific aims are 1 to summarize scientific knowledge in the area of upper extremity joint replacement 2 to discuss currently unsolved clinical problems and potential solutions based on current scientific knowledge 3 to review new prosthetic designs and 4 to explore future directions of investigation In the first section general concepts of arthroplasty and of upper extremity reconstruction are presented Ronald Linscheid presents a short history of finger joint replacement Alain Potaznik and Franz Burny discuss the problems of friction wear and biological responses after the implantation of artificial joint replacement Laurie Faro presents the European legislation for medical devices such as arthroplasties Finally Frédéric Schuind and Franz Burny review the indications and contraindications to upper extremity arthroplasty The following sections discuss for each upper extremity joint the indications of joint replacement including the most frequent diseases the prostheses designed for that particular joint the biomechanical evaluation after prosthetic implantation and the early or long term clinical results We made a special effort to include at the end of each section some alternative procedures of reconstruction We are convinced that this unique book fills an important gap in the medical literature      **Recent Advances**

King, Marco Rizzo, 2021-06-11 Arthroplasty of the upper extremity is an established surgical intervention in the management of arthritis of the elbow wrist and hand The anatomy kinematics and demands of the elbow wrist thumb CMC and finger MCP and PIP joints pose unique surgical challenges Implant design considerations are important in providing a joint that mimics the native joints and maximizes survivorship However outcomes are less predictable in these upper extremity joints when compared to the hips and knees Each joint also carries its own set of potential complications and salvage options for revision and failed arthroplasty This unique text helps the orthopedic and hand surgeon understand the surgical approaches unique anatomic considerations and both the historical and current designs related to each respective joint enabling the surgeon to better appreciate the benefits and limitations of

each arthroplasty Presenting the current state of the art the seven sections proceed anatomically from the elbow to the fingers with each section comprised of three thematic chapters discussing implant design considerations primary arthroscopy techniques and revision arthroscopy techniques including non surgical options for treating these often difficult problems This consistent approach accompanied by plentiful figures radiographs and intraoperative photos ensures that this will be a user friendly resource for orthopedic and hand surgeons residents and trainees *Joint Replacement in the Upper Limb* Institution of Mechanical Engineers (Great Britain). Joint Replacement in the Upper Limb ,1977      Surgical Rationales in Functional Reconstructive Surgery of the Upper Extremity Jörg Bahm,2023 This book develops and describes surgical rationales in the field of reconstructive surgery for upper limb function both in children and adults suffering from various diseases or trauma leading to a variety of motor and sensory impairments sometimes associated with growth related deformities Every surgical career is a unique living story of

learning performing questioning trial and error and finally success Every surgeon has to integrate a wealth of information regarding ongoing clinical and research work in a range of disciplines and with time and experience a surgical rationale is developed that serves as a baseline and support for their day to day work Following a structure starting with the patient s needs the surgeon and the training the different tissues are addressed and their pathophysiology discussed in detail including basic research and surgical expertise The book is not a surgical compendium but instead focuses on the detailed baseline behind day to day clinical examinations functional evaluations and surgical work Readers will learn how the tissues interact how pathologies change them and interfere with their functions and how to reverse the pathophysiological sequence by surgical technical means to improve function Although the book presents the author s personal views all aspects are explained and debated on the basis of past and current clinical findings ongoing basic research and input from other disciplines readers may disagree with certain points but choose to implement some of the rationales and priorities incorporate findings from fields they d never previously explored or investigate them further This book offers an extensive framework of argumentation and is intended to inspire and support readers in terms of decision making and understanding current or uncommon procedures Practitioners in the fields of peripheral nerve surgery reconstructive plastic surgery upper limb orthopedics neuropediatrics biomechanics physiotherapy and ergotherapy will find the book a valuable asset and a trusted companion in the daily quest to improve patient care
