Rational Machines and Artificial Intelligence Tshilidzi Marwala, 2021-03-31 Intelligent machines are populating our social economic and political spaces These intelligent machines are powered by Artificial Intelligence technologies such as deep learning They are used in decision making One element of decision making is the issue of rationality Regulations such as the General Data Protection Regulation GDPR require that decisions that are made by these intelligent machines are explainable Rational Machines and Artificial Intelligence proposes that explainable decisions are good but the explanation must be rational to prevent these decisions from being challenged Noted author Tshilidzi Marwala studies the concept of machine rationality and compares this to the rationality bounds prescribed by Nobel Laureate Herbert Simon and rationality bounds derived from the work of Nobel Laureates Richard Thaler and Daniel Kahneman Rational Machines and Artificial Intelligence describes why machine rationality is flexibly bounded due to advances in technology This effectively means that optimally designed machines are more rational than human beings Readers will also learn whether machine rationality can be quantified and identify how this can be achieved Furthermore the author discusses whether machine rationality is subjective Finally the author examines whether a population of intelligent machines collectively make more rational decisions than individual machines Examples in biomedical engineering social sciences and the financial sectors are used to illustrate these

concepts Provides an introduction to the key questions and challenges surrounding Rational Machines including When do we rely on decisions made by intelligent machines What do decisions made by intelligent machines mean Are these decisions rational or fair Can we quantify these decisions and Is rationality subjective Introduces for the first time the concept of rational opportunity costs and the concept of flexibly bounded rationality as a rationality of intelligent machines and the implications of these issues on the reliability of machine decisions Includes coverage of Rational Counterfactuals group versus individual rationality and rational markets Discusses the application of Moore's Law and advancements in Artificial Intelligence as well as developments in the area of data acquisition and analysis technologies and how they affect the boundaries of intelligent machine rationality

Structural Analysis and the Process of Economic Development Jonas Ljungberg, 2016-05-05 Economic development is full of discontinuities Mainstream economists perceive these as external disturbances to a natural state of equilibrium but this book argues that much of the discontinuities are part of economic development suggesting that patterns can be understood with structural analysis Structural Analysis and the Process of Economic Development presents a detailed analysis of the trajectory of Swedish economic change since the nineteenth century The emergence of structural analysis in economic research is reviewed as well as a chapter devoted to development blocks a key concept that was outlined in the 1940s and that has much in common with the more recent notions techno economic paradigms and general purpose technologies Structural analysis and the major contributions by Sch n are introduced in this book Also highlighted is Sweden's integration into the international economy via the nineteenth century capital markets along with structural analysis as a tool for understanding climate change The recent technique of wavelet analysis and its potential for structural analysis is demonstrated in a non technical chapter This book is suitable for those who are interested in and study political economy economic history and European history

Rendering Techniques '95 Partick M. Hanrahan, Werner Purgathofer, 2012-12-06 Following five successful workshops in the previous five years the Rendering Workshop is now well established as a major international forum and one of the most reputable events in the field of realistic image synthesis Including the best 31 papers which were carefully evaluated out of 68 submissions the book gives an overview on hierarchical radiosity Monte Carlo radiosity wavelet radiosity nondiffuse radiosity and radiosity performance improvements Some papers deal with ray tracing reconstruction techniques volume rendering illumination user interface aspects and importance sampling Also included are two invited papers by James Arvo and Alain Fournier As is the style of the Rendering Workshop the contributions are mainly of algorithmic nature often demonstrated by prototype implementations From these implementations result numerous color images which are included as appendix The Rendering Workshop proceedings are certainly an obligatory piece of literature for all scientists working in the rendering field but they are also very valuable for the practitioner involved in the implementation of state of the art rendering system certainly influencing the scientific progress in this field
