Recent and Ancient Nonmarine Depositional Environments Frank G. Ethridge, 1981-01-01 **Recent and Ancient Nonmarine Depositional Environments** Society of Economic Paleontologists and Mineralogists. Rocky Mountain Section, 1981 Symposium held in Casper Wyoming June 3 7 1979 Recent and Ancient Nonmarine Depositional Environments Society of Economic Paleontologists and Mineralogists. Rocky Mountain Section, *Recent and Ancient Nonmarine Depositional Environments*, 1981 **Depositional Environments, Lithostratigraphy, and Biostratigraphy of the White River and Arikaree Groups (Late Eocene to Early Miocene, North America)** Dennis O. Terry, Hannan E. LaGarry, Robert M. Hunt (Jr.), 1998-01-01 Modern and Ancient Fluvial Systems J. D. Collinson, John Lewin, 2009-04-15 A book of research articles focused on fluvial processes The book is divided into a several main sections for ease of reference Hydrodynamics and Bedforms Present Day Channel Processes Facies Models and Economic Aspects Geographical and geological investigations are also described in Modern and Ancient Fluvial Systems Research articles include the topics of bedforms and structures near the transition between dunes and a plane bed as well as the vertical and lateral relationships between five major delta distributary channels Research papers are also shared within the publication such as a review of the major developments in the study of channel changes during this century The individual chapter authors take readers from the Colorado Plateau of the Western United States to the Witwatersrand of South Africa Sedimentology, Mineralogy, Palynology, and Depositional History of Some Uppermost Cretaceous and Lowermost Tertiary Rocks Along the Utah Book and Roan Cliffs East of the Green River Karen J. Franczyk, Janet K. Pitman, Douglas J. Nichols, Geological Survey (U.S.), 1990 Stratigraphy: A Modern Synthesis Andrew D. Miall, 2022-03-02 The updated textbook is intended to serve as an advanced and detailed treatment of the evolution of the subject of stratigraphy from its disparate beginnings as separate studies of sedimentology lithostratigraphy chronostratigraphy etc into a modern integrated discipline in which all components are necessary There is a historical introduction which now includes information about the timeline of the evolution of the components of modern stratigraphy The elements of the various components facies analysis sequence stratigraphy mapping methods chronostratigraphic methods etc are outlined and a chapter discussing the modern synthesis is included near the end of the book which closes with a discussion of future research trends in the study of time as preserved in the stratigraphic record **Volcaniclastic Sedimentation in Lacustrine Settings** James D. L. White, N. R. Riggs, 2009-03-05 This volume presents a unique compendium of papers assessing the effects of volcanism on lakes as recorded by the volcaniclastic sediments deposited within them The unifying theme is that the effects of volcanism on lacustrine sedimentation are diverse and distinctive and that volcaniclastic lacustrine sediments hold the key to understanding a range of processes and events that cannot be readily addressed by the study of any non volcanic lakes Thirteen papers with authors from nine countries examine both modern and ancient eruption affected lacustrine deposits Volcanic eruptions affect lakes and their

deposits in many ways and these papers evaluate processes and products of volcanic eruptions within lakes of tectonically impounded lakes strongly influenced by volcanism of eruption impounded lakes and of general factors controlling sedimentation of vitric ash and pumice Tephra stratigraphic studies also take advantage of the exceptional preservation of thin laminae in quiet lakes to precisely date episodes in the evolution of long lived lakes and their catchment areas and to understand how volcanism affects normal lacustrine processes The volume as a whole is an unparalleled source of information on all aspects of the physical sedimentary results of volcanism in lacustrine settings and serves as a complement to other studies concerned primarily with thermal and geochemical characteristics of lakes within volcanic craters If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP30>

Sediment Diagenesis A. Parker, B.W. Sellwood, 2012-12-06 The topic of sediment diagenesis is of fundamental importance to industry in the evaluation of hydrocarbon and water reservoir rocks Detailed knowledge of the diagenetic textures fabrics and minerals and a prediction of the regional diagenetic response partly controls hydrocarbon recovery programmes In other words knowledge of the diagenesis can aid or even control conservation policy Similarly facies and diagenetic trends within basins can influence exploration policy This volume incorporates the majority of the principal contributions given to the NATO Advanced Study Institute held in the University of Reading U K from July 12th to 25th 1981 at which the major themes of carbonate and terrigenous clastic sediments were treated sequentially from deposition to deep burial Eighty selected scientists from twelve NATO and three other countries participated in the Institute The keynote addresses which acted as the touchstones for discussion are presented here in the expectation that they will stimulate a still wider audience We gratefully acknowledge the award of a grant from the Scientific Affairs Division of NATO to run the Institute and also the cooperation of the University of Reading Mrs D M Powell helped in many ways with the organisation and also retyped the entire manuscript of this book A Parker B W Sellwood vii

Diagenesis, I G.V. Chilingarian, K.H. Wolf, 1988-07-01 Diagenesis is a highly developed interdisciplinary field of study It is reciprocal in that it borrows from numerous scientific or technological specialities and then in turn repays them with useful results Too often however the information gained and concepts developed remain unintegrated instead of being utilized quickly by several related earth science fraternities This volume the first of a multi volume work attempts to bring together such information thereby assisting the individual and the research group in keeping up with the data explosion There is no end in sight to diagenetic research because of its wide practical and intellectual appeals Consequently periodic reviews such as presented in this volume are greatly needed

Evaporites, Petroleum and Mineral Resources J.L. Melvin, 1991-04-05 This volume illustrates the expanding knowledge of evaporites as important reservoir seals fluid aquitards ore hosting sediments and economically

viable sediments in their own right Researchers oil and gas professionals minerals resource professionals environmental specialists and others within geology and the other earth sciences shall utilize the information within this book in their understanding of the many recent discoveries and concepts involved in the field of evaporite sedimentology

Controls on the Distribution and Quality of Cretaceous Coals Peter J. McCabe, Judith Totman Parrish, 1992-01-01 Sandstone Petroleum Reservoirs John H. Barwis, John G. McPherson, Joseph R.J. Studlick, 2012-12-06 Sandstone Petroleum Reservoirs presents an integrated multidisciplinary approach to the geology of sandstone oil and gas reservoirs Twenty two case studies involving a variety of depositional settings tectonic provinces and burial diagenetic histories emphasize depositional controls on reservoir architecture petrophysical properties and production performance An introductory section provides perspective to the nature of reservoir characterization and highlights the important questions that future studies need to address A reservoir summary following each case study aids the reader in gaining quick access to the main characteristics of each reservoir This casebook is heavily illustrated and most data have not been previously published The intended audience comprises a broad range of practicing earth scientists including petroleum geologists geophysicists and engineers Readers will value the integration of geological versus engineering interests provided here and will be enabled to improve exploration and production results

Carbonates in Continental Settings, 2009-10-05 This book provides an up to date compilation of the latest research on the petrography facies paleoenvironmental significance and economic aspects of continental carbonates The overall organization of the book first emphasizes the descriptive aspects and processes operating on carbonate deposits in greatly varied settings and then considers applications for basin analysis as well as economic and historical aspects This volume will be a valuable tool for graduate and postgraduate students as well as for experienced researchers The second part volume 62 in this series will deal with the geochemistry diagenesis and applications of carbonates in continental settings Covering the greatly varied aspects of carbonate deposits from continental settings deposits Clear and easy to follow organization Up to date information so readers can find references from the classic literature to the most recent research

The Geology of Fluvial Deposits Andrew D. Miall, 2013-12-20 Fluvial deposits represent the preserved record of one of the major nonmarine environments They accumulate in large and small intermontane valleys in the broad valleys of trunk rivers in the wedges of alluvial fans flanking areas of uplift in the outwash plains fronting melting glaciers and in coastal plains The nature of alluvial assemblages their lithofacies composition vertical stratigraphic record and architecture reflect an inter play of many processes from the wandering of individual channels across a floodplain to the long term effects of uplift and subsidence Fluvial deposits are a sensitive indicator of tectonic processes and also carry subtle signatures of the climate at the time of deposition They are the hosts for many petroleum and mineral deposits This book is

about all these subjects The first part of the book following a historical introduction constructs the stratigraphic framework of fluvial deposits step by step starting with lithofacies combining these into architectural elements and other facies associations and then showing how these in turn combine to represent distinctive fluvial styles Next the discussion turns to problems of correlation and the building of large scale stratigraphic frameworks These basin scale constructions form the basis for a discussion of causes and processes including autogenic processes of channel shifting and cyclicity and the larger questions of allogenic tectonic eustatic and climatic sedimentary controls and the development of our ideas about nonmarine sequence stratigraphy
