Recent Progress in Hormone Research Gregory Pincus, 2013-10-22 Recent Progress in Hormone Research Volume III contains papers delivered at the 1947 Laurentian Hormone Conference This volume is organized into five parts encompassing 12 chapters that cover growth metabolic and steroid hormones The opening parts cover the biochemical and physiological aspects of growth metabolic and steroid hormones These parts particularly review the functions of the so called sexogens as well as some diseases caused by steroids such as the Addison s disease The succeeding parts describe the methods adaptable to the study of metabolic hormone problems The remaining two parts discuss the testis physiology and function the role of hormones in hypertension These parts also consider the participation of the other system of the body such as the renal pressor system and central nervous system in hypertension The factors influencing the hormonal defense mechanism are also examined This book will prove useful to endocrinologists

Recent Progress in Hormone Research - Volume 50 C. Wayne Bardin, 2013-10-22 Recent Progress in Hormone Research Volume 50 Proceedings of the 1993 Laurentian Hormone Conference focuses on the advancements of processes methodologies techniques and approaches involved in hormone research The selection first offers information on the molecular design of the NMDA receptor channel synthesis and signaling of growth hormone releasing hormone and signaling mechanisms during the response of pituitary gonadotropes to GnRH The discussions focus on calcium economy of gonadotropes role of oscillations structure and expression of the GHRH gene transgenic animal models for GHRH action and functional determinants in NMDA receptors The text then elaborates on signaling mechanisms during the response of pituitary gonadotropes to GnRH molecular genetic analysis of cAMP and glucocorticoid signaling in development and activins and the receptor serine kinase superfamily The publication takes a look at MAP kinase cascade expression and signal transduction pathways of gonadotropin releasing hormone receptors ovarian cell differentiation and the role of oxytocin and its receptor in parturition The book also examines the role of prolactin in developmental differentiation of hypophysiotropic tuberoinfundibular

dopaminergic neurons and calcitonin gene expression in rat uterus during pregnancy The selection is a valuable source of data for researchers interested in hormone research Neuroendocrinology Transmembrane signaling Reproduction Steroids and the steroid receptor family Hypertension The Practice of Time Series Analysis Hirotugu Akaike, Genshiro Kitagawa, 2012-12-06 Due to the introduction of the information criterion AIC and development of practical use of Bayesian modeling the method of time analysis is now showing remarkable progress In attempting the study of a new field the actual phenomenon is rarely so simple as to allow direct applications of existing methods of analysis or models The real thrill of the statistical analysis lies in the process of developing a new model depending on the purpose and the characteristics of the object of the research The purpose of this book is to introduce the readers to successful applications of the methods of time series analysis in a variety of fields such as engineering earth science medical science biology and economics The editors have been aware of the importance of cooperative research in statistical science and carried out various cooperative research projects in the area of time series analysis The Institute of Statistical Mathematics was reorganized as an inter university research institute in 1985 and the activities of the Institute have been organized to promote the cooperative researches as its central activity This book is composed of the outcomes of cooperative researches developed within this environment and contains the results ranging from the pioneering realizations of statistical control to the latest consequences of time series modeling **G Proteins and Calcium Signaling** Paul H. Angiotensin I.H. Page,F.M. Bumpus,2012-12-06 The history of arterial hypertension is both long and short long since BRIGHT 1827 first related hardness of the pulse to hardness of the kidneys and hyper trophy of the heart short in that modern research began in the late twenties Most of what we know of these diseases has been discovered in the past fifty years The modern story should have begun in 1897 when an extract of kidney was shown to be pressor But little was done with knowledge until about 1929 when the relationship of this kidney extract called renin to hypertension was pos tulated The pressor effects were however unlike most of those seen with sub stances such as epinephrine or vasopressin Plasma was required for action of renin and the active substance appeared to be protein In 1939 it was shown that renin was not in itself a pressor substance but rather a proteolytic enzyme which produced a powerful pressor substance acting on a substrate synthesized by the liver Later it was noted that the first definable step after the formation of this peptide was cleaving of the decapeptide which had little or no demonstrable activity with loss of two amino acids to form the octapeptide called angiotensin Within a decade synthesis was achieved which made the substance available for world wide study
