Philosophy and Revolutions in Genetics Keekok Lee, 2016-01-03 The last century saw two great revolutions in genetics the development of classic Mendelian theory and the discovery and investigation of DNA Each fundamental scientific discovery in turn generated its own distinctive technology Biotechnology is the offspring of the latter and is expected to be the driving force behind economic growth in the twenty first century These two case studies enable the author to conduct a philosophical exploration of the relationship between fundamental scientific discoveries on the one hand and the technologies that spring from them on the other As such it is also an exercise in the philosophy of technology

Human Paleopsychology K. Bailey, 2013-08-21 First Published in 1986 In this book the author seeks to demonstrate his belief that any credible view must grapple not only with human distinctiveness e.g. learning capacity language rationality and culture but the dark sides of senseless violence and social disorder as well Any such grappling with the dark side must necessarily confront our animal natures as well as our distinctly human natures

Origins and Revolutions Clive Gamble, 2007-03-26 In this study Clive Gamble presents and questions two of the most

famous descriptions of change in prehistory The first is the human revolution when evidence for art music religion and language first appears The second is the economic and social revolution of the Neolithic period Gamble identifies the historical agendas behind origins research and presents a bold alternative to these established frameworks relating the study of change to the material basis of human identity He examines through artefact proxies how changing identities can be understood using embodied material metaphors and in two major case studies charts the prehistory of innovations asking did agriculture really change the social world This is an important and challenging book that will be essential reading for every student and scholar of prehistory

Conceptual Revolutions Wenceslao J. González, 2011 *The Mendelian Revolution* Peter J. Bowler, 2015-11-19

An introduction to the history of genetics and the rethinking of evolutionism **The Human Difference** Alan Wolfe, 2023-04-28 Are we losing touch with our humanity Yes contends Alan Wolfe in this provocative critique of modern American intellectual life From ecology sociobiology and artificial intelligence to post modernism and the social sciences Wolfe examines the antihumanism underlying many contemporary academic trends Animal rights theorists and ecological extremists too often downplay human capacities Computers are smarter than we are and will soon replace us as the laws of evolution continue to unfold Even the humanities held in sway by imported theories that are explicitly antihumanistic in intention have little place for human beings Against this backdrop Wolfe calls for a return to a moral and humanistic social science one in which the qualities that distinguish us as a species are given full play Tracing the development of modern social theory Wolfe explores the human centered critical thinking of eighteenth and nineteenth century scholars now eclipsed by post modern and scientific theorizing In the work of Durkheim Marx Weber and Mead human beings are placed on the center stage shaping and interpreting the world around them Sociology in particular emerged as a distinct science because the species it presumed to understand was distinct as well Recent intellectual trends in contrast allow little room for the human difference Sociobiology underlines the importance of genetics and mathematically governed evolutionary rules while downplaying the unique cognitive abilities of humans Artificial intelligence heralds the potential superiority of computers to the human mind Post modern theorizing focuses on the interpretation of texts in self referential modes rejecting humanism in any form And mainstream social science using positivist paradigms of human behavior based on the natural sciences develops narrow and arid models of social life Wolfe eloquently makes a case for a new commitment to humanistic social science based on a realistic and creative engagement with modern society A reconstituted social science acknowledging our ability to interpret the world will thrive on a recognition of human difference Nurturing a precious humanism social science can celebrate and further refine our unique capacity to create morality and meaning for ourselves This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1993 Are we losing touch with our humanity Yes contends Alan Wolfe in this provocative critique of modern American intellectual life From ecology sociobiology and artificial intelligence to post modernism and the social sciences Wolfe examines the antihu **The Fourth Industrial Revolution** Gideon Rose, 2016-01-19 From social media to the Internet of Things digital fabrication to robotics virtual reality to synthetic biology new technologies are racing forward across the board Together they are ripping up the rule book for people firms and governments alike Mastering this so called Fourth Industrial Revolution is the theme of the World Economic Forum s 2016 Annual Meeting for which this special collection serves as background reading Klaus Schwab kicks things off with an overview of the topic followed by sections on the technological

Sustainable Agriculture in the Era of the OMICs Revolution Channa S. Prakash, Sajid Fiaz, Muhammad Azhar Nadeem, Faheem Shehzad Baloch, Abdul Qayyum, 2023-01-01 Access to food with enough calories and nutrients is a fundamental right of every human The global population has exceeded 7.8 billion and is expected to pass 10 billion by 2055 Such rapid population increase presents a great challenge for food supply More grain production is needed to provide basic calories for humans Thus it is crucial to produce 60-110% more food to fill the gap between food production and the demand of future generations Meanwhile food nutritional values are of increasing interest to accommodate industrialized modern lives The instability of food production caused by global climate change presents another great challenge The global warming rate has become more rapid in recent decades with more frequent extreme climate change including higher temperatures drought and floods Our world faces various unprecedented scenarios such as rising temperatures which causes melting glaciers and the resulting various biotic and abiotic stresses ultimately leading to food scarcity In these circumstances it is of utmost importance to examine the genetic basis and extensive utilization of germplasm to develop climate resilient cultivars through the application of plant breeding and biotechnological tools Future crops must adapt to these new and unpredictable environments Crop varieties resistant to biotic and abiotic stresses are also needed as plant disease insects drought high and low temperature stresses are expected to be impacted by climate change Thus we need a food production system that can simultaneously satisfy societal demands and long term development Since the Green Revolution in the 1960s farming has been heavily dependent on high input of nitrogen and pesticides This leads to environmental pollution which is not sustainable in the long run Therefore a new breeding scheme is urgently needed to enable sustainable agriculture including new strategies to develop varieties and crops that have high yield potential high yield stability and superior grain quality and nutrition while also using less consumption of

water fertilizer and chemicals in light of environmental protection While we face these challenges we also have great opportunities especially with flourishing developments in omics technologies High quality reference genomes are becoming available for a larger number of species with some species having more than one reference genome The genome wide resequencing of diverse varieties enables the identification of core and pan genomes An integration of omics data will enable a rapid and high throughput identification of many genes simultaneously for a relevant trait This will change our current research paradigm fundamentally from single gene analysis to pathway or network analysis This will also expand our understanding of crop domestication and improvement In addition with the knowledge gained from omics data in combination with new technologies like targeted gene editing we can breed new varieties and crops for sustainable agriculture

The PCR Revolution Stephen A. Bustin, 2010 Examines the latest innovations and the overall impact of PCR on areas of molecular research

The Einsteinian Revolution Hanoeh Gutfreund, Jürgen Renn, 2025-08-19 How the Einsteinian revolution can be understood as the result of a long term evolution of science The revolution that emerged from Albert Einstein's work in the early twentieth century transformed our understanding of space time motion gravity matter and radiation Beginning with Einstein's miracle year of 1905 and continuing through his development of the theory of general relativity Einstein spurred a revolution that continues to reverberate in modern day physics In *The Einsteinian Revolution* Hanoeh Gutfreund and Jürgen Renn trace the century long transformation of classical physics and argue that the revolution begun by Einstein was in fact the result of a long term evolution Describing the origins and context of Einstein's innovative research Gutfreund and Renn work to dispel the popular myth of Einstein as a lone genius who brought about a revolution in physics through the power of his own pure thought We can only understand the birth of modern physics they say if we understand the long history of the evolution of knowledge Gutfreund and Renn outline the essential structures of the knowledge system of classical physics on which Einstein drew Examining Einstein's discoveries from 1905 onward they describe the process by which new concepts arose and the basis of modern physics emerged These transformations continued eventually resulting in the establishment of quantum physics and general relativity as the two major conceptual frameworks of modern physics and its two unreconciled theoretical approaches Gutfreund and Renn note that Einstein was dissatisfied with this conceptual dichotomy and began a search for a unified understanding of physics a quest that continued for the rest of his life

Levels of Organic Life and the Human Helmuth Plessner, 2021-05-20 The groundbreaking classic of twentieth century German philosophy now available in English with an introduction by J M Bernstein Helmuth Plessner's *Levels of Organic Life and the Human* draws on phenomenological biological and social scientific sources to offer a systematic account of nature life and human existence The book considers non living nature plants non human animals and human beings a sequence of increasingly complex modes of boundary dynamics simply put interactions between a thing's insides and the surrounding world Living things are classed and analyzed by their positionality or orientation to and within

an environment According to Plessner's radical view the human form of life is excentric that is the relation between body and environment is something to which humans themselves are positioned and can take a position This excentric positionality enables human beings to take a stand outside the boundaries of their own body a possibility with significant implications for knowledge culture religion and technology A powerful and sophisticated account of embodiment the Levels shows with reference both to science and to philosophy how life can be seen on its own terms to establish its own boundaries and how from the standpoint of life the human establishes itself in relation to the nonhuman As such the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal posthumanism the material turn and the biology and sociology of cognition

The Paleobiological Revolution David Sepkoski, Michael Ruse, 2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology
