Wheat and Rice in Disease Prevention and Health Ronald Ross Watson, Victor R Preedy, Sherma Zibadi, 2014-01-22 Wheat and Rice in Disease Prevention and Health reviews the wide range of studies focusing on the health benefits and disease prevention associated with the consumption of wheat and rice the two most widely consumed whole grains This book provides researchers clinicians and students with a comprehensive definitive and up to date compendium on the diverse basic and translational aspects of whole grain consumption and its protective effects across human health and disease It serves as both a resource for current researchers as well as a guide to assist those in related disciplines to enter the realm of whole grain and nutrition research Overall studies have shown that a decrease in the amount of whole grains in the modern diet is related to a corresponding increase in health problems that are attributed to this all too common dietary imbalance The resulting health issues associated with an over processed diet which provides inadequate levels of nutrients from whole grains may include obesity diabetes high blood lipids chronic inflammatory states and an excess of oxidative stress Strength and endurance may also suffer as a result of these nutrient deficiencies followed by declines in energy and immunity Saves researchers and clinicians time in quickly

accessing the latest details on a broad range of nutritional and epidemiological issues Provides a common language for nutritionists nutrition researchers epidemiologists and dietitians to discuss how the action of wheat and rice protect against disease and modify human health Preclinical clinical and population studies help nutritionists dieticians and clinicians map out key areas for research and further clinical recommendations *The Handbook of Microbial Bioresources* Vijai Kumar Gupta, Gauri Dutt Sharma, Maria G Tuohy, Rajeeva Gaur, 2016-06-27 Microbial technology plays an integral role in the biotechnology bioengineering biomedicine biopharmaceuticals and agriculture sector This book provides a detailed compendium of the methods biotechnological routes and processes used to investigate different aspects of microbial resources and applications It covers the fundamental and applied aspects of microorganisms in the health industry agriculture and environmental sectors reviewing subjects as varied and topical as pest control health and industrial developments and animal feed **Avian Gut Function in Health and Disease**, 2006 Derived from the 28th Poultry Science Symposium of the World's Poultry Science Association UK this book focuses on the current interest of the phasing out of antibiotic use in poultry and covers in depth interactions between the bird its diet and potential pathogens It also demonstrates the understanding of the gut health in the 21st century of commercial poultry and flocks and the ultimate safety of poultry product in the human food chain **Nutrition and health of the gastrointestinal tract** M.C. Blok, H.A. Vahl, L. de Lange, A.E. v.d. Braak, G. Hemke, M. Hessing, 2023-08-28 Microbial agents particularly bacteria represent the greatest risk to public health The traditional end product oriented food inspection systems are inadequate for identifying and eliminating the usually symptomless animal carriers of agents causing foodborne infections and intoxications Modern risk based prevention approaches are the only effective way to reduce the prevalence of these hazards from our foods As an additional safety valve microbial decontamination procedures are currently being suggested and its implementation in industrial food processing has at least in some parts of the world met with governmental approval The residues in foods of some non microbial agents have more recently also caused substantial consumer disquiet This equally applies to non conventional foods containing GMO's In this publication these issues are addressed by invited expert scientists from various disciplines many of which have key positions in EU funded research programmes on these very topics and or are advisers to international public health bodies The editors firmly believe that the very nature of the theme the excellence of the papers and the holistic approach chosen will draw an audience from both an industry and academic background Feed evaluation P.J. Moughan, M.W.A. Verstegen, M.I. Visser-Reyneveld, 2000-11-22 The provision of balanced diets accounts for the major cost in intensive livestock production and to maximise profits requires continuous improvement in all aspects of dietary formulation Consequently throughout the world considerable scientific effort is devoted to bringing about a better description of the nutrient content of diverse feedstuffs to understanding the mode of action of anti nutritional factors to improving the description of nutrient requirements and to developing refined technologies for feed formulation processing

and provision Feed evaluation science is a rapidly developing high technology field with feed compounders nutritionists advisors and producers needing to keep abreast of rapid innovation This text written by a team of international authorities covers basic principles and new developments in feed evaluation for simple stomached animals with an emphasis on pigs and poultry The topics of nutrient analysis and characterisation nutrient bioavailability post absorptive nutrient utilisation modern approaches to the estimation of nutrient requirements including growth modelling are all covered in depth Recent advances in feed evaluation for pigs poultry and companion animals are highlighted The work is essential reading for anyone needing to remain at the forefront of technological developments in feed evaluation The Weaner Pig M. Waran,2007-06-19 This book describes the development of horse behaviour and the way in which the management of horses today affects their welfare Horses for sport companionship and work are considered and ways of improving their welfare by better training and management is described The book assesses welfare nutrition and behaviour problems with horses The authors include internationally recognised scientists from Britain Ireland USA and Australia *Applications of Gene-Based Technologies for Improving Animal Production and Health in Developing Countries* Harinder P.S. Makkar,Gerrit J. Viljoen,2005-08-12 Modern Biotechnology has potential for solving many problems associated with animal productivity and health and offers exciting opportunities for enhancing agricultural productivity At present the focus is however on the issues and problems of significance for livestock producers in the developed world In order to fully realize the benefits of this technology in developing countries there is a need to identify characterize and apply appropriate gene based technologies for these regions These proceedings present peer reviewed state of the art papers describing the achievements in the areas of animal breeding and genetics animal nutrition animal health and environment ethics safety and regulatory aspects of gene based technologies achievements which could be realized using these modern scientific tools to maximise the benefits from the livestock revolution that is taking place and the constraints in the use of gene based technologies and their specific research needs This book will help in bridging the wide gap between developed and developing countries in the development and use of gene based technologies and to elucidate the current and future roles of such technologies in the developing world It is a good reference source for researchers students and policy makers alike
