Recent Advances In Parsing Technology:

Recent Advances in Parsing Technology H. Bunt, Masaru Tomita, 1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus's determinism hypothesis i.e they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees themselves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no arguments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves

The Integration of Phonetic Knowledge in Speech Technology William J. Barry, William John Barry, Willem A. van Dommelen, 2006-03-31 Continued progress in Speech Technology in the face of ever increasing demands on the performance levels of applications is a challenge to the whole speech and language science community Robust recognition and understanding of spontaneous speech in varied environments good comprehensibility and naturalness of expressive speech synthesis are goals that cannot be achieved without a change of paradigm This book argues for interdisciplinary communication and cooperation in problem solving in general and discusses the interaction between speech and language engineering and phonetics in particular With a number of reports on innovative speech technology research as well as more theoretical discussions it addresses the practical scientific and sometimes the philosophical problems that stand in the way of cross disciplinary collaboration and illuminates some of the many possible ways forward Audience Researchers and professionals in speech technology and computational linguists Visual Language Theory Kim Marriott, Bernd Meyer, 2012-12-06 Kim Marriott Bernd Meyer Communication is one of the hallmarks of humans When we think of human communication most people first think of spoken and written languages These are similar in that symbols in the language are encountered and processed sequentially either temporally as they are spoken or as characters are read across a page However not all human communication is sequential in nature Important components of human communication are visual languages such as maps or diagrams In these languages the basic symbols are not encountered sequentially but rather seen together at a glance Visual languages are ubiquitous in human cultures ranging from traditional paintings of central Australian aborigines which are in part maps of the countryside to an architect's design of a new building Visual languages have been employed from earliest pre history to the present and are used in almost every human endeavor They cover the entire spectrum of human expression ranging from fine art such as an abstract expressionist's private language to precise technical communication using rigorously defined notation such as musical notation mathematical notation or street maps Some visual languages such as sign languages used by the deaf

community substitute spoken language entirely Indeed sign languages for example American Sign Language are a particularly interesting instance of visual communication since they use three dimensional spatial arrangements of signs in combination with their sequential temporal order to constitute meaning

Grammatical theory: From transformational grammar to constraint-based approaches (Fifth revised edition) Stefan Müller, 2023-01-23 This book introduces formal grammar theories that play a role in current linguistic theorizing Phrase Structure Grammar Transformational Grammar Government Binding Generalized Phrase Structure Grammar Lexical Functional Grammar Categorical Grammar Head Driven Phrase Structure Grammar Construction Grammar Tree Adjoining Grammar The key assumptions are explained and it is shown how the respective theory treats arguments and adjuncts the active passive alternation local reorderings verb placement and fronting of constituents over long distances The analyses are explained with German as the object language The second part of the book compares these approaches with respect to their predictions regarding language acquisition and psycholinguistic plausibility The nativism hypothesis which assumes that humans possess genetically determined innate language specific knowledge is critically examined and alternative models of language acquisition are discussed The second part then addresses controversial issues of current theory building such as the question of flat or binary branching structures being more appropriate the question whether constructions should be treated on the phrasal or the lexical level and the question whether abstract non visible entities should play a role in syntactic analyses It is shown that the analyses suggested in the respective frameworks are often translatable into each other The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured

Conceptual Structures: Leveraging Semantic Technologies Sebastian Rudolph, Frithjof Dau, Sergei O. Kuznetsov, 2009-07-25 This book constitutes the refereed proceedings of the 17th International Conference on Conceptual Structures ICCS 2009 which took place in Moscow Russia on July 26-31 2009 The 18 papers presented together with 5 invited contributions were carefully reviewed and selected from approximately 50 submissions Originally centered around research on knowledge representation and reasoning with conceptual graphs over the years ICCS has broadened its scope to include innovations from a wider range of theories and related practices among them other forms of graph based formalisms like RDF or existential graphs formal concept analysis semantic Web technologies ontologies concept mapping and more

Head-Driven Phrase Structure Grammar Stefan Müller, Anne Abeillé, Robert D. Borsley, Jean-Pierre Koenig, 2024-11-07 Head Driven Phrase Structure Grammar HPSG is a constraint based or declarative approach to linguistic knowledge which analyses all descriptive levels phonology morphology syntax semantics pragmatics with feature value pairs structure sharing and relational constraints In syntax it assumes that expressions have a single relatively simple constituent structure This volume provides a state of the art introduction to the framework Various chapters discuss basic assumptions and formal foundations describe the evolution of the framework and go into the details of the main syntactic phenomena Further chapters are devoted to non syntactic levels of description The

book also considers related fields and research areas gesture sign languages computational linguistics and includes chapters comparing HPSG with other frameworks Lexical Functional Grammar Categorical Grammar Construction Grammar Dependency Grammar and Minimalism A Chronology of Translation in China and the West Sin-wai Chan,2009 This book is a study of the major events and publications in the world of translation in China and the West from its beginning in the legendary period to 2004 with special references to works published in Chinese and English It covers a total of 72 countries places and 1 000 works All the events and activities in the field have been grouped into 22 areas or categories for easy referencing This book is a valuable reference tool for all scholars working in the field of translation *Treebanks A*. Abeillé,2012-12-06 Linguists and engineers in Natural Language Processing tend to use electronic corpora more and more Most research has long been limited to raw unannotated texts or to tagged texts annotated with parts of speech only but these approaches suffer from a word by word perspective A new line of research involves corpora with richer annotations such as clauses and major constituents grammatical functions and dependency links The first parsed corpora were the English Lancaster treebank and Penn Treebank New ones have recently been developed for other languages This book provides a state of the art on work being done with parsed corpora gathers 21 papers on building and using parsed corpora raising many relevant questions deals with a variety of languages and a variety of corpora is for those working in linguistics computational linguistics natural language syntax and grammar *Artificial Intelligence: Methodology, Systems, and Applications* Doris R. Scott,2003-08-02 This book constitutes the refereed proceedings of the 10th International Conference on Artificial Intelligence Methodology Systems and Applications AIMSAS 2002 held in Varna Bulgaria in September 2002 The 26 revised full papers presented together with 2 invited papers were carefully reviewed and selected for inclusion in this book The papers address a broad spectrum of topics in AI including natural language processing computational learning Machine learning AI planning heuristics neural information processing adaptive systems computational linguistics multi agent systems AI logic knowledge management and information retrieval Framework and Resources for Natural Language Parser Evaluation Tuomo Kakkonen,2007
