Pitelka,George M. Hidy,2012-12-06 In a very real sense much of North American physiological plant ecology began in the Basin and Range and has been researched there over the last four decades However we believe that this book may be the first attempt to bring together the full range of contemporary research into the fascinating plant biology of the Basin and Range Province We have invited contributions from researchers presently working in and around the Province and asked them to review the major vegetation zones and distinctive environmental issues from a predominantly plant ecophysiological perspective As researchers interested in plant physiological and ecological processes and in atmospheric processes affecting vegetation we have tended to emphasize the atmosphere plant soil continuum in structuring this book After an introduction to the geography of the region we deal with atmospheric processes and climates of the Great Basin follow with chapters on the different vegetational zones treated from ecophysiological perspectives and then place emphasis on plant soil relations We have not treated plant animal interactions in the detail that the impacts of man and his domesticated animals on the desert ecosystem deserve However we have included a review of a very promising technique analysis of stable isotopes at natural abundance for integration of these processes We close with a compelling statement of the case for the Great Basin as a laboratory for climatic change research prepared by a multidisciplinary team from the Desert Research Institute **Proteins** James J. L'Italien,2012-12-06 This volume surveys the current status of many of the important methods and approaches which are central to the study of

protein structure and function Many of the articles in this volume are written to emphasize the general utility of the method or approach which is at its core and to provide sufficient literature references to enable the reader to adapt the method or approach to other applications It is hoped that this volume will provide a source from which newcomers as well as experienced scientists may become more familiar with recent developments and future trends in some of the important areas of protein research The articles which comprise this book are selected proceedings from the Symposium of American Protein Chemists which was held in San Diego California September 30 to October 3 1985 The goal of the organizers of this first symposium was to provide a forum for discussion and interaction among scientists whose interests span the broad spectrum of protein structure and function research The concept and timing of the symposium well received as evidenced by the approximately 500 delegates to the symposium The inaugural meeting was marked by a strong scientific program with over 140 papers presented in either a lecture or poster format

Somatic Embryogenesis in Woody Plants

S. Mohan Jain, Pramod P.K. Gupta, R.J. Newton, 2012-12-06 The quality of human life has been maintained and enhanced for generations by the use of trees and their products In recent years ever rising human population growth has put tremendous pressure on trees and tree products growing awareness of the potential of previously unexploited tree resources and environmental pollution have both accelerated development of new technologies for tree propagation breeding and improvement Biotechnology of trees may be the answer to solve the problems which cannot be solved by conventional breeding methods The combination of biotechnology and conventional methods such as plant propagation and breeding may be a novel approach to improving and multiplying in large number the trees and woody plants So far plant tissue culture technology has largely been exploited in the propagation of ornamental plants especially foliage house plants by commercial companies Generally tissue culture of woody plants has been recalcitrant However limited success has been achieved in tissue culture of angiosperm and gymnosperm woody plants A number of recent reports on somatic embryogenesis in woody plants such as Norway spruce *Picea abies* Loblolly pine *Pinus taeda* Sandalwood *Santalum album* Citrus Mango *Mangifera indica* etc offer a ray of hope of an inexpensive clonal propagation for large scale production of plants or seedlings or somatic embryo plants by protoplast work cryopreservation genetic transformation and artificial or manufactured seed production
