Madhusudhan Alle, Ruchir Priyadarshi, Shiv Dutt Purohit, 2025-01-16 This book covers the recent developments in biopolymer nanocomposite materials and their possible impact on the food packaging industry. The food industry has been one of the highest consumers of plastics for the past two decades where plastics have been used in huge amounts as food packaging materials. The generation of non biodegradable plastic based municipal solid waste especially due to food packaging industry has now become one of the two paramount problems faced by the world today. The other problem is being the wastage of food in humongous quantities annually. With the onset of globalization food produced in one part of the world became available to people living in another part. However during transportation and storage a plethora of food gets wasted due to microbial contamination or chemical oxidation. This book looks into biopolymer nanocomposites and its ability to address both these issues. It presents the very essence of biopolymer nanocomposite technology with the combination of various nanomaterials and biopolymer to yield a functional product for food packaging which is demonstrated in the various chapters. In general this book caters to the needs of students involved in nanotechnology, biotechnology, food technology, industrial chemistry and many other interdisciplinary subjects.

Application of Nanotechnology in Food Science, Processing and Packaging Chukwuebuka Egbuna, Jaison Jeevanandam, Kingsley C. Patrick-Iwuanyanwu, Eugene N. Onyeike, 2022-05-03 This book entitled *Application of Nanotechnology in Food Science Processing and Packaging* presents up to date information on the emerging roles of nanotechnology in food industry its fundamental concepts, techniques and applications. The application of nanotechnology in the food industry is an emerging area which has found tremendous use in improving food quality through the enhancement of food taste, texture, colour and flavour. Also its application has improved the bioavailability and target delivery of certain bioactive food ingredients through controlled release of nutrients, a feature that is impossible with the conventional methods of food processing. The application of nanotechnology in food packaging for the detection of contaminants, pathogens, biotoxins and pesticides through nanosensor safety evaluations has led to the increase in shelf life of products and quality assurance through the detection and monitoring of toxins. This book taps from the experience of subject experts from key institutions around the world. The users of this book will benefit greatly as the chapters were simplified and arranged carefully to aid proper understanding, consistency and continuity.

Sustainable Food Packaging Technology Athanassia Athanassiou, 2021-05-10 Towards more sustainable packaging with biodegradable materials. The combination of the continuously increasing food packaging waste with the non biodegradable nature of the plastic materials that have a big slice of the packaging market makes it necessary to move towards sustainable packaging for the benefit of the environment and human health. Sustainable packaging is the type of packaging that can provide to food the necessary protection conditions but at the same time is biodegradable and can be disposed as organic waste to the landfills in order to biodegrade through a natural procedure. In this way sustainable packaging becomes part of the circular economy. *Sustainable Food Packaging Technology* deals with packaging solutions that use engineered biopolymers or biocomposites.

that have suitable physicochemical properties for food contact and protection and originate both from renewable or non renewable resources but in both cases are compostable or edible Modified paper and cardboard with increased protective properties towards food while keeping their compostability are presented as well The book also covers natural components that can make the packaging functional e g by providing active protection to the food indicating food spoilage Addresses urgent problems food packaging creates a lot of hard to recycle waste this book puts forward more sustainable solutions using biodegradable materials State of the art Sustainable Food Packaging Technology provides knowledge on new developments in functional packaging From lab to large scale applications expert authors report on the technology aspects of sustainable packaging
