Xue,2004-08-19 On behalf of the program committee we were pleased to present this year s program for ACSAC Asia Pacific Computer Systems Architecture Conference Now in its ninth year ACSAC continues to provide an excellent forum for researchers educators and practitioners to come to the Asia Pacific region to exchange ideas on the latest developments in computer systems architecture This year the paper submission and review processes were semiautomated using the free version of CyberChair We received 152 submissions the largest number ever Each paper was assigned at least three mostly four and in a few cases even five committee members for review All of the papers were reviewed in a ten month period during which the program chairs regularly monitored the progress of the review process When reviewers claimed inadequate expertise additional reviewers were solicited In the end we received a total of 594 reviews 3.9 per paper from committee members as well as 248 coreviewers whose names are acknowledged in the proceedings We would like to thank all of them for their time and effort in providing us with such timely and high quality reviews some of them on extremely short notice

Java Performance Scott Oaks,2020-02-11 Coding and testing are generally considered separate areas of expertise In this practical book Java expert Scott Oaks takes the approach that anyone who works with Java should be adept at understanding how code behaves in the Java Virtual Machine including the tunings likely to help performance This updated second edition helps you gain in depth knowledge of Java application performance using both the JVM and the Java platform Developers and performance engineers alike will learn a variety of features tools and processes for improving the way the Java 8 and 11 LTS releases perform While the emphasis is on production supported releases and features this book also features previews of exciting new technologies such as ahead of time compilation and experimental garbage collections Understand how various Java platforms and compilers affect performance Learn how Java garbage collection works Apply four principles to obtain

best results from performance testing Use the JDK and other tools to learn how a Java application is performing Minimize the garbage collector's impact through tuning and programming practices Tackle performance issues in Java APIs Improve Java driven database application performance *Official Gazette of the United States Patent and Trademark Office United States. Analytic Models in Memory and Processor Allocation Jai Ram Rao, 1972 A problem of memory and processor allocation to competing programs in time sharing environment is investigated Two level core and auxiliary paged memory system is studied An analytic model of CPU time needed instructions executed and memory required pages needed is proposed as an approximation to actual program behavior Specific probability distributions are postulated for CPU time needed and memory required these are used in studying memory and processor allocation Program behavior execution in paging environment is modeled a memory use estimator function is derived page size dependence of this function is explicitly included This model conforms to previous results established in simulation studies of program behavior Based on memory use estimator function paging characteristics of a single program and the system under multiprogramming are studied Author Modified Abstract

Educational Bulletin North Carolina. Dept. of Public Instruction, 1911 **Intel Xeon Phi Coprocessor Architecture and Tools** Rezaur Rahman, 2013-09-26 Intel Xeon Phi™ Coprocessor Architecture and Tools The Guide for Application Developers provides developers a comprehensive introduction and in depth look at the Intel Xeon Phi coprocessor architecture and the corresponding parallel data structure tools and algorithms used in the various technical computing applications for which it is suitable It also examines the source code level optimizations that can be performed to exploit the powerful features of the processor Xeon Phi is at the heart of world's fastest commercial supercomputer which thanks to the massively parallel computing capabilities of Intel Xeon Phi processors coupled with Xeon Phi coprocessors attained 33.86 teraflops of benchmark performance in 2013 Extracting such stellar performance in real world applications requires a sophisticated understanding of the complex interaction among hardware components Xeon Phi cores and the applications

running on them In this book Rezaur Rahman an Intel leader in the development of the Xeon Phi coprocessor and the optimization of its applications presents and details all the features of Xeon Phi core design that are relevant to the practice of application developers such as its vector units hardware multithreading cache hierarchy and host to coprocessor communication channels Building on this foundation he shows developers how to solve real world technical computing problems by selecting deploying and optimizing the available algorithms and data structure alternatives matching Xeon Phi s hardware characteristics From Rahman s practical descriptions and extensive code examples the reader will gain a working knowledge of the Xeon Phi vector instruction set and the Xeon Phi microarchitecture whereby cores execute 512 bit instruction streams in parallel
