Paleodemography Age Distributions From Skeletal Samples:

Paleodemography Robert D. Hoppa, James W. Vaupel, 2008-10-30 Paleodemography is the field of enquiry that attempts to identify demographic parameters from past populations usually skeletal samples derived from archaeological contexts and then to make interpretations regarding the health and well being of those populations However paleodemographic theory relies on several assumptions that cannot easily be validated by the researcher and if incorrect can lead to large errors or biases In this book physical anthropologists mathematical demographers and statisticians tackle these methodological issues for reconstructing demographic structure for skeletal samples Topics discussed include how skeletal morphology is linked to chronological age assessment of age from the skeleton demographic models of mortality and their interpretation and biostatistical approaches to age structure estimation from archaeological samples This work will be of immense importance to anyone interested in paleodemography including biological and physical anthropologists demographers geographers evolutionary biologists and statisticians

Paleodemography Robert D. Hoppa, James W. Vaupel, 2002 Many methodological and theoretical problems exist in reconstructing demographic structure from archaeological populations Paleodemography is an innovative volume which tackles these issues to reach a consensus on the way forward It will be the benchmark for all those interested in skeletal samples and their implications for analysing past populations

Biological Anthropology of the Human Skeleton M. Anne Katzenberg, Shelley R. dominant culture This book serves as an indispensable research guide to biological anthropologists osteologists paleoanthropologists and archaeologists Now with a stronger focus on teaching complex material to students this revised edition provides enhanced case studies and discussions for future directions making it an invaluable textbook for advanced undergraduates and graduate students in biological anthropology and forensic anthropology programs

Recent Advances in Ageing and Sexing Animal Bones Deborah Ruscillo, 2015-06-30 This volume in the ICAZ series deals with the technical advances made over the last twenty years in the field of ageing and sexing animal bones The analysis of ancient DNA holds great possibilities for sexing certain faunal assemblages though by no means all which is an urgent issue in the study of hunting and animal husbandry It can be assumed that our forebears used more subtle taxonomic criteria than we do today and it is important therefore that we are able to recognise traits that will allow for more accurate classification in terms of calendar age or sex The eighteen papers in this book examine the state of research for various techniques of age sex determination and assess potential future development

THE HUMAN SKELETON IN FORENSIC MEDICINE Mehmet Yasar Iscan, Maryan Steyn, 2013-09-01 This classic in forensic anthropology has been thoroughly updated and greatly expanded for the new Third Edition The result presents the state of the medicolegal art of investigating human skeletal remains The third edition follows more than 25 years after the second edition During this time considerable changes occurred in the field and Forensic Anthropology became a distinct specialty in its own right Included in the book are detailed discussions on crime scene investigation including excavation techniques time interval since death human or animal remains mass graves and preparation of remains Existing chapters all dramatically revised bring readers in line with the current concepts of skeletal age determination of sex assessment of ancestry calculation of stature factors of individualization superimposition and restoration of physiognomy There is also a section on dental analysis examining such topics as dental anatomy nomenclature estimation of age in subadults and adults determination of sex and ancestry and pathological conditions New additions are chapters on skeletal pathology and trauma assessment A new chapter has also been added on Forensic Anthropology of the Living Although all of the sections of the book have been updated significantly the authors have retained some sense of history to recognize the many pioneers that have shaped the discipline The text will assist forensic anthropologists and forensic pathologists who have to analyze skeletons found in forensic contexts This book has a global perspective in order to make it usable to practitioners across the world Where possible short case studies have been added to illustrate the diverse aspects of the work

Age Estimation of the Human Skeleton Krista E. Latham, J. Michael Finnegan, 2010 Age Estimation of the Human Skeleton is a needed up to date book providing anthropologists and anatomists with a broad spectrum of techniques focused on aging human skeletal remains It represents the most current reference book devoted entirely to estimating age at death for skeletonized and decomposed human remains and is a convenient starting point for practical and research applications This book is a valuable reference for all individuals interested in the

identification or analysis of human remains including forensic anthropologists bioarchaeologists forensic odontologists pathologists and anatomists at student and professional levels Age Estimation of the Human Skeleton would serve as an ideal supplemental textbook for introductory and advanced osteology and forensic anthropology courses Age Estimation of the Human Skeleton is a collection of some of the latest research in age estimation techniques of human skeletal remains It compiles recent scientific research on age at death estimation using dental and gross skeletal morphological indicators of age as well as histological and multifactorial age estimation techniques Age estimation methods from all life stage categories including fetal sub adult and adult are included in the book Age Estimation of the Human Skeleton also includes chapters that evaluate and review the older more traditional aging techniques as well as information that explores future directions and considerations for research in this area Overall Age Estimation of the Human Skeleton bolsters the references available to researchers in academic laboratory and medicolegal facilities and is an attractive text to a sizable spectrum of analysts
