Pattern Recognition Rejean Plamondon, Heng-Da Cheng, 1991 This book contains 15 reviewed papers selected from among those presented at the 4th Vision Interface Conference in Halifax Canada 14-18 May 1990 The papers are grouped into three sections which deal with parallel architectures and neural networks algorithms for analysis and processing and systems and applications Pattern Recognition: Architectures, Algorithms And Applications Rejean Plamondon, Heng-da Cheng, 1991-08-12

This book contains 15 reviewed papers selected from among those presented at the 4th Vision Interface Conference in Halifax Canada 14-18 May 1990 The papers are grouped into three sections which deal with parallel architectures and neural networks algorithms for analysis and processing and systems and applications **2000 4th**

International Conference on Algorithms and Architectures for Parallel Processing Andrzej Gościński, 2000 ICA3PP 2000 was an important conference that brought together researchers and practitioners from academia industry and governments to advance the knowledge of parallel and distributed computing The proceedings constitute a well defined set of innovative research papers in two broad areas of parallel and distributed computing 1 architectures algorithms and networks 2 systems and applications **Computer Epistemology** Tibor Vámos, 1991-03-22 This book is an essay on relevant problems of epistemology the theory of knowledge related to computer science It draws a continuous line between the earliest scientific approaches of epistemology starting with the Greek Classics and the recent practical and theoretical problems of computer modelling and by that the appropriate application of computers to our present problems Uncertainty logic and language are the key issues of this road leading to some new aspects of cognitive psychology and unification of the different results for a modelling procedure The book is not a textbook but a critical survey of usual and advertised methods with an evaluation of them from the point of view of their applicability reliability and limits Probability Bayesian Dempster Shafer fuzzy and other approaches are treated in this way in uncertainty different worlds concepts non monotonic logic and other methods and views in logic The emphasis in linguistics is put on the meta concept and in cognitive applications of the pattern concept Written mostly in an entertaining style this book provides a more palatable reading of a profound subject

Mathematical Foundations Of Parallel Computing V V Voevodin, 1992-03-24 Parallel implementation of algorithms involves many difficult problems In particular among them are round off analysis the way to convert sequential programs and algorithms into the parallel mode the choice of appropriate or optimal computer architect and so on To solve these problems it is necessary to know very well the structure of algorithms This book deal with the mathematical mechanism that permits us to investigate structures of both sequential and parallel algorithms This mechanism allows us to recognize and explain the relations between different methods of constructing parallel algorithms the methods of analysing round off errors the methods of optimizing memory traffic the methods of working out the fastest implementation for a given parallel computer and other methods attending the joint investigation of algorithms and computers *An Introduction to Chinese, Japanese,*

and Korean Computing Timothy D. Huang, This first book of its kind gives a comprehensive introduction to Chinese Japanese and Korean CJK Computing Every possible related issue is covered but an in depth look into Chinese Japanese and Korean computing problems and environment in particular is also discussed Besides being of interest to Oriental Language computing professionals it also provides a clear overview of the subject to individuals learning CJK Computing and computer companies working on CJK systems

Introduction to Database and Knowledge-base Systems S. Krishna, 1992 This book provides a comprehensive yet concise coverage of the concepts and technology of database systems and their evolution into knowledge bases The traditional material on database systems at senior undergraduate level is covered An understanding of concepts is emphasized avoiding extremes in formalism or detail Rather than be restricted to a single example used over an entire book a variety of examples are used These enable the reader to understand the basic abstractions which underlie description of many practical situations A major portion of the book concerns database system technology with focus on the relational model Various topics are discussed in detail preparing the ground for more advanced work

Computational Principles of Mobile Robotics Gregory Dudek, Michael Jenkin, 2010-07-26 This textbook for advanced undergraduates and graduate students emphasizes algorithms for a range of strategies for locomotion sensing and reasoning It concentrates on wheeled and legged mobile robots but discusses a variety of other propulsion systems This edition includes advances in robotics and intelligent machines over the ten years prior to publication including significant coverage of SLAM simultaneous localization and mapping and multi robot systems It includes additional mathematical background and an extensive list of sample problems Various mathematical techniques that were assumed in the first edition are now briefly introduced in appendices at the end of the text to make the book more self contained Researchers as well as students in the field of mobile robotics will appreciate this comprehensive treatment of state of the art methods and key technologies
