were designed to answer many far reaching questions including Is the global precedence effect due to low or high level processing Can veridical and illusory perception be explained by the same theory What is the relationship between attention and perception Is perception direct or an inferential process What mechanisms are involved in picture and word naming and categorization How can word and picture processing be modeled The answers to these questions seek to unite theoretical perspectives on very important areas of cognitive psychology such as attention perception representation of visual objects and words and human memory

The Cambridge Handbook of Applied Perception Research Robert R. Hoffman, Peter A. Hancock, Mark W. Scerbo, Raja Parasuraman, James L. Szalma, 2015-01-26 The Cambridge Handbook of Applied Perception Research covers core areas of research in perception with an emphasis on its application to real world environments Topics include multisensory processing of information time perception sustained attention and signal detection as well as pedagogical issues surrounding the training of applied perception researchers In addition to familiar topics such as perceptual learning the Handbook focuses on emerging areas of importance such as human robot coordination haptic interfaces and issues facing societies in the twenty first century such as terrorism and threat detection medical errors and the broader implications of automation Organized into sections representing major areas of theoretical and practical importance for the application of perception psychology to human performance and the design and operation of human technology interdependence it also addresses the challenges to basic research including the problem of quantifying information defining cognitive resources and theoretical advances in the nature of attention and perceptual processes

Object Perception Bryan E. Shepp, Soledad Ballesteros, 2013-04-15 This collection of research on object perception focuses on holistic and featural properties of objects the mechanisms that produce such properties how people choose one type of property over another and how such choices are improved during the course of child development The contributions consider alternative perceptual characterizations the way in which such properties are represented in the mind how particular properties are more useful in some kinds of tasks that humans perform and how the developing child learns to cope with different properties in choosing among alternatives to optimize task performance These papers were written by specialists for specialists in experimental cognitive and developmental psychology

Comprehension of Graphics W. Schnotz, R.W. Kulhavy, 1994-08-01 Graphic displays such as charts graphs diagrams and maps play an important role today in the design and presentation of instructional materials education There is also a strong need in scientific technical and administrative fields to visually present facts laws principles etc The increasing use of computer based learning environments has also become an important field where the visual presentation of information plays a central role Despite the importance of graphical displays as a means of communication and the fact that research about learning and cognition has advanced rapidly in the past two decades the comprehension of graphics is still a rather unexplored area The comprehension of graphics is not only a stimulating topic in the fields of science and instructional psychology but also in related disciplines

such as semiotics and artificial intelligence Research on the comprehension of graphics complements the scientific investigation of cognitive processes in text comprehension which has contributed much to our understanding of human cognition and learning Ultimately a better understanding of the cognitive processes involved in the comprehension of graphics will have an impact not only on cognitive theory but also on educational practice *User Interface Design* Siegfried Treu,2012-12-06 Solidly founded on 25 years of research and teaching the author integrates the salient features of the subdisciplines of computer science into a comprehensive conceptual framework for the design of human computer interfaces He combines definitions models taxonomies structures and techniques with extensive references and citations to provide professors and students of all levels with a text and practical reference *Local Applications of the Ecological Approach To Human-Machine Systems* Peter A. Hancock,John M. Flach,Jeff Caird,Kim J. Vicente,2018-05-02 There is a growing consensus in the human factors ergonomics community that human factors research has had little impact on significant applied problems Some have suggested that the problem lies in the fact that much HF E research has been based on the wrong type of psychology an information processing view of psychology that is reductionistic and context free Ecological psychology offers a viable alternative presenting a richer view of human behavior that is holistic and contextualized The papers presented in these two volumes show the conceptual impact that ecological psychology can have on HF E as well as presenting a number of specific examples illustrating the ecological approach to human machine systems It is the first collection of papers that explicitly draws a connection between these two fields While work in this area is only just beginning the evidence available suggests that taking an ecological approach to human factors ergonomics helps bridge the existing gap between basic research and applied problems
