Positivity in Algebraic Geometry II R.K. Lazarsfeld,2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover editionas Vols 48 and 49 in the series Ergebnisse der Mathematik und ihrer Grenzgebiete   **Positivity in Algebraic Geometry I** R.K. Berman,Yanir A. Rubinstein,2025-01-28 This volume presents a collection of research articles arising from the conference on Convex and Complex Perspectives on Positivity in Geometry held in Cetraro Italy from October 31 November 4 2022 The conference celebrated the 70th birthday of Bo Berndtsson and the vitality of current research across complex and convex geometry as well as interactions between the two areas all united by the overarching concept of positivity Positivity plays a central role in complex and convex geometry It arises from a range of complementary perspectives as illustrated by the breadth of the papers appearing in this volume including existence K hler Einstein edge metrics Santal type inequalities curvature of direct images of bundles extension theorems for holomorphic functions optimal transport and Hessian manifolds

interpolation and Brunn Minkowski theory and non Archimedean geometry The format of the workshop was innovative compared to standard conferences in mathematics with focused 30 minute talks aimed at stimulating lively discussions and a flipped classroom where the audience becomes more engaged and the speaker is not expected to transmit more information than listeners can possibly absorb Lengthy breaks between talks and a relatively small number of talks allowed for useful time blocks for collaboration This volume reflects the spirit of the conference showcasing the vitality of current research in these areas as well as the profound impact of Bo Berndtsson s contributions to the field **Positivity in Arakelov Geometry over Adelic Curves** Huayi Chen,Atsushi Moriwaki,2024-09-08 This monograph presents new research on Arakelov geometry over adelic curves a novel theory of arithmetic geometry developed by the authors It explores positivity conditions and establishes the Hilbert Samuel formula and the equidistribution theorem in the context of adelic curves Connections with several classical topics in Arakelov geometry and Diophantine geometry are highlighted such as the arithmetic Hilbert Samuel formula positivity of line bundles equidistribution of small subvarieties and theorems resembling the Bogomolov conjecture Detailed proofs and explanations are provided to ensure the text is accessible to both graduate students and experienced researchers Algebraic Curves and Projective Geometry Edoardo Ballico,Ciro Ciliberto,2014-01-15 *Integrable Systems and Algebraic Geometry: Volume 1* Ron Donagi,Tony Shaska,2020-04-02 Created as a celebration of mathematical pioneer Emma Previato this comprehensive book highlights the connections between algebraic geometry and integrable systems differential equations mathematical physics and many other areas The authors many of whom have been at the forefront of research into these topics for the last decades have all been influenced by Previato s research as her collaborators students or colleagues The diverse articles in the book demonstrate the wide scope of Previato s work and the inclusion of several survey and introductory articles makes the text accessible to graduate students and non experts as well as researchers This first volume covers a wide range of areas related to integrable systems often emphasizing the deep connections with algebraic geometry Common themes include theta functions and Abelian varieties Lax equations integrable hierarchies Hamiltonian flows and difference operators These powerful tools are applied to spinning top Hitchin Painleve and many other notable special equations **Projective Algebraic Geometry in Positive Characteristic** Ragni Piene,1993 *Motivic Integration* Antoine Chambert-Loir,Johannes Nicaise,Julien Sebag,2018-09-15 This monograph focuses on the geometric theory of motivic integration which takes its values in the Grothendieck ring of varieties This theory is rooted in a groundbreaking idea of Kontsevich and was further developed by Denef Loeser and Sebag It is presented in the context of formal schemes over a discrete valuation ring without any restriction on the residue characteristic The text first discusses the main features of the Grothendieck ring of varieties arc schemes and Greenberg schemes It then moves on to motivic integration and its applications to birational geometry and non Archimedean geometry Also included in the work is a prologue on p adic analytic manifolds which served as a model for motivic integration With its

extensive discussion of preliminaries and applications this book is an ideal resource for graduate students of algebraic geometry and researchers of motivic integration It will also serve as a motivation for more recent and sophisticated theories that have been developed since **Algebraic Geometry Over a Field of Positive Characteristic** J.
