Possibility Of Metaphysics Substance Identity And Time:

The Possibility of Metaphysics E. Jonathan Lowe, 1998-10-08 Jonathan Lowe argues that metaphysics should be restored to a central position in philosophy as the most fundamental form of rational inquiry whose findings underpin those of all other disciplines He portrays metaphysics as charting the possibilities of existence by identifying the categories of being and the relations of ontological dependency between entities of different categories He proceeds to set out a unified and original metaphysical system he defends a substance ontology according to which the existence of the world as one world in time depends upon the existence of persisting things which retain their identity over time and through processes of qualitative change And he contends that even necessary beings such as the abstract objects of mathematics depend ultimately for their existence upon there being a concrete world of enduring substances Within his system of metaphysics Lowe seeks to answer many of the deepest and most challenging questions in philosophy

Aquinas and the Ship of Theseus Christopher M. Brown, 2005-05-15 Thomas Aquinas has always been viewed as a highly important figure in Western Civilization and the chief philosopher of Roman Catholicism In recent decades there has been a renewed interest in Aquinas thought as scholars have been exploring the relevance of his thought to contemporary philosophical problems The book will be of interest not only to historians of medieval philosophy but to philosophers who work on problems associated with the nature of material objects Because human beings are typically understood to be a kind of material object the book will also be of interest to philosophers working on topics in the philosophy of religion philosophy

of mind and the philosophy of human nature Although the work contains the kinds of details that are necessary for a work of historical scholarship it is written in a manner that makes it approachable for undergraduate students in philosophy and so it would be a welcomed addition to any university library

The Triadic Structure of the Mind Francesco

Belfiore,2016-11-17 In this third edition of The Triadic Structure of the Mind Francesco Belfiore begins from the basic ontological conception of the structure and functioning of the mind or spirit as an evolving conscious triad composed of intellect sensitiveness and power each exerting a selfish and a moral activity Based on this original concept of the triadic bidirectional and evolving mind Belfiore has developed a coherent philosophical system through which he offers fresh solutions in the fields of ontology knowledge language aesthetics ethics politics and law The present third edition like the previous one includes an extensive treatment of the topics addressed as well as the quotation of the views of the major thinkers whose thought has been discussed and reinterpreted In addition new concepts have been introduced some passages have been clarified and the style has been improved in several points The result is an original and exhaustive book which will be of interest to all philosophy scholars

Taking Persons Seriously Mihretu P. Guta,Scott B. Rae,2024-06-06

This volume attempts to show why ontology matters for a proper grasp of issues in bioethics Contemporary discussions on bioethics often focus on seeking solutions for a wide range of issues that revolve around persons The issues in question are multi layered involving such diverse aspects as the metaphysical ontological personal medical moral legal cultural social political religious and environmental In navigating through such a complex web of issues it has been said that the central problems philosophers and bioethicists face are ethical in nature In this regard biomedical sciences and technological breakthroughs take a leading role in terms of shaping the sorts of questions that give rise to ethical problems For example is it ethical to keep terminally ill patients alive on dialysis machines or artificial ventilators Is it ethical to take someone s vital organs upon death and transplant them into another person s body without any prior consent from the deceased person Reproductive techniques also raise complicated ethical issues involving in vitro fertilization contraceptives prenatal testing abortions and genetic enhancements Moreover biomedical issues raise ethical problems regarding research on human subjects stem cell research and enhancement biotechnology The beginning and end of life issues bring up their own complicated ethical conundrums involving among other things terminating life support and euthanasia This book approaches such complex bioethical questions by engaging in ground level debates about the ontology of persons This is a nonnegotiable first step in taking steps forward in seeking a plausible solution s for the complex ethical problems in bioethics

Studies in the

Ontology of E.J. Lowe Timothy Tambassi (Ed.),2022-11-22 With the death of Edward Jonathan Lowe 1950 2014 the analytical philosophy lost one of the most influential thinkers of the last thirty five years His contributions include but are not limited to philosophy of mind John Locke s philosophy and metaphysics In particular concerning metaphysical studies the most innovative part of Lowe s philosophical perspective is the four category ontology that according to the author provides

an exhaustive inventory of what there is and a powerful explanatory framework for a metaphysical foundation of natural science Accordingly the purpose of this volume is to collect some new essays from distinguished authorities in the field critics and collaborators of Lowe in order to present some fundamental issues triggered by his ontological proposal

Metaphysical Grounding Fabrice Correia,Benjamin Schnieder,2012-10-04 Some of the most eminent and enduring philosophical questions concern matters of priority what is prior to what What grounds what Is for instance matter prior to mind Recently a vivid debate has arisen about how such questions have to be understood Can the relevant notion or notions of priority be spelled out And how do they relate to other metaphysical notions such as modality truth making or essence This volume of new essays by leading figures in contemporary metaphysics is the first to address and investigate the metaphysical idea that certain facts are grounded in other facts An introduction introduces and surveys the debate examining its history as well as its central systematic aspects The volume will be of wide interest to students and scholars of metaphysics

Philosophy of Mind John Heil,2013 When first published John Heil s introduction quickly became a widely used guide for students with little or no background in philosophy to central issues of philosophy of mind ee Heil provided an introduction free of formalisms technical trappings and specialized terminology ee He offered clear arguments and explanations focusing on the ontological basis of mentality and its place in the material world ee The book concluded with a systematic discussion of questions the book raises and a sketch of a unified metaphysics of mind thus inviting scholarly attention while providing a book very well suited for an introductory course This Third Edition builds on these strengths and incorporates new material on theories of consciousness computationalism the language of thought and animal minds as well as other emerging areas of research ee With an updated reading list at the end of each chapter and a revised bibliography this new edition will again make it the indispensable primer for anyone seeking better understanding of the central metaphysical issues in philosophy of mind ee

Truth and Ontology Trenton Merricks,2007-04-19 That there are no white ravens is true because there are no white ravens And so there is a sense in which that truth depends on the world But this sort of dependence is trivial After all it does not imply that there is anything that is that truth s truthmaker Nor does it imply that something exists to which that truth corresponds Nor does it imply that there are properties whose exemplification grounds that truth Trenton Merricks explores whether and how truth depends substantively on the world or on things or on being And he takes a careful look at philosophical debates concerning among other things modality time and dispositions He looks at these debates because any account of truth s substantive dependence on being has implications for them And these debates likewise have implications for how and whether truth depends on being Along the way Merricks makes a number of new points about each of these debates that are of independent interest of interest apart from the question of truth s dependence on being Truth and Ontology concludes that some truths do not depend on being in any substantive way at all One result of this conclusion is that it is a mistake to oppose a philosophical theory merely because it violates truth s alleged substantive dependence on being

Another result is that the correspondence theory of truth is false and more generally that truth itself is not a relation of any sort between truth bearers and that which makes them true

Individuals Across the Sciences Alexandre Guay, Thomas Pradeu, 2016 Knowing what individuals are and how they can be identified is a crucial question for both philosophers and scientists This volume explores how different sciences handle the issue of understanding individuality and reflects back on how this scientific work relates to metaphysics itself

Thin Objects Øystein Linnebo, 2018-05-23 Are there objects that are thin in the sense that not very much is required for their existence Frege famously thought so He claimed that the equinumerosity of the knives and the forks suffices for there to be objects such as the number of knives and the number of forks and for these objects to be identical The idea of thin objects holds great philosophical promise but has proved hard to explicate ystein Linnebo aims to do so by drawing on some Fregean ideas First to be an object is to be a possible referent of a singular term Second singular reference can be achieved by providing a criterion of identity for the would be referent The second idea enables a form of easy reference and thus via the first idea also a form of easy being Paradox is avoided by imposing a predicativity restriction on the criteria of identity But the abstraction based on a criterion of identity may result in an expanded domain By iterating such expansions a powerful account of dynamic abstraction is developed The result is a distinctive approach to ontology Abstract objects such as numbers and sets are demystified and allowed to exist alongside more familiar physical objects And Linnebo also offers a novel approach to set theory which takes seriously the idea that sets are formed successively

Metametaphysics and the Sciences Frode Kjosavik, Camilla Serck-Hanssen, 2019-10-17 This collection addresses metaphysical issues at the intersection between philosophy and science A unique feature is the way in which it is guided both by history of philosophy by interaction between philosophy and science and by methodological awareness In asking how metaphysics is possible in an age of science the contributors draw on philosophical tools provided by three great thinkers who were fully conversant with and actively engaged with the sciences of their day Kant Husserl and Frege Part I sets out frameworks for scientifically informed metaphysics in accordance with the meta metaphysics outlined by these three self reflective philosophers Part II explores the domain for co existent metaphysics and science Constraints on ambitious critical metaphysics are laid down in close consideration of logic meta theory and specific conditions for science Part III exemplifies the role of language and science in contemporary metaphysics Quine s pursuit of truth is analysed Cantor s absolute infinitude is reconstrued in modal terms and sense is made of Weyl s take on the relationship between mathematics and empirical aspects of physics With chapters by leading scholars *Metametaphysics and the Sciences* is an in depth resource for researchers and advanced students working within metaphysics philosophy of science and the history of philosophy

Nominalism about Properties Ghislain Guigon, Gonzalo Rodriguez-Pereyra, 2015-02-11 Nominalism which has its origins in the Middle Ages and continues into the Twenty First Century is the doctrine that there are no universals This book is unique in bringing together essays on the history of nominalism and essays that present a systematic discussion

of nominalism It introduces the reader to the distinction between particulars and universals to the difficulties posed by this distinction and to the main motivations for the rejection of universals It also describes the main varieties of nominalism about properties and provides tools to understand how they developed in the history of Western Philosophy All essays are new and are written by experts on the topic and they advance the discussion about nominalism to a new level

Grounding in Medieval Philosophy Calvin G. Normore, Stephan Schmid, 2024-05-09 This book offers a selection of 13 case studies on how the notion of grounding helps illuminate philosophical discussions of our past with a special focus on debates of the Middle Ages It thereby makes not only the case that the notion of grounding which has become so widely debated in analytic metaphysics has a long and venerable tradition but also shows that this tradition has a lot to teach to contemporary philosophers of grounding This is because the historical authors discussed in this volume that is Aristotle Fazang Boethius Avicenna Abelard Aquinas Scotus Ockham Buridan Su rez Leibniz and others suggested different types of non efficient causal explanations which are to be carefully distinguished This volume illustrates how philosophy and history of philosophy can be mutually illuminating by showing that the terminology developed in the contemporary debate about grounding can help reconstruct philosophical discussions from Antiquity up to the Early Modern Period and that these very discussions enrich and in part challenge the contemporary debate about grounding In this vein it is an important reading for everyone interested in the history of grounding and the philosophical insights that this history might have left to us

Organismal Agency Jana Švorcová, 2024-05-09 This book explores the notion of organismal agency from the perspective of both philosophy and biology The two sections of the book delve into parallel themes including distinctions between organic and inorganic nature self organization autonomy self presentation memory umwelt and environmental influence The philosophical part focuses on the influential thinkers who shaped our perception of living entities beyond mere mechanisms It scrutinizes the concepts of organism and nature in the works of Aristotle Kant Schelling and various processualists Each chapter explores facets of their ideas that directly or indirectly foreshadowed or contributed to the formulation of the concept of agency The biological part of the book investigates various concepts associated with agency such as experience meaning attribution and phenotypic plasticity as well as reproduction organisational constraints modularity development of integrated phenotypes organismal choices or self representation through animal organisation In essence this work offers a comprehensive examination of organismal agency and its philosophical and biological foundations Collaboratively authored by individuals from several institutions this publication caters primarily to researchers and students working at the intersection of philosophy and biology

Individuation, Process, and Scientific Practices Otávio Bueno, Ruey-Lin Chen, Melinda Bonnie Fagan, 2018-10-19 What things count as individuals and how do we individuate them It is a classic philosophical question often tackled from the perspective of analytic metaphysics This volume proposes that there is another channel by which to approach individuation from that of scientific practices From this perspective the question then becomes

How do scientists individuate things and therefore count them as individuals This volume collects the work of philosophers of science to engage with this central philosophical conundrum from a new angle highlighting the crucial topic of experimental individuation and building upon recent pioneering work in the philosophy of science An introductory chapter foregrounds the problem of individuation arguing it should be considered prior to the topic of individuality The following chapters address individuation and individuality from a variety of perspectives with prominent themes being the importance of experimentation individuation as a process and pluralism in individuation's criteria Contributions examine individuation in a wide range of sciences including stem cell biology particle physics and community ecology Other chapters examine the metaphysics of individuation its bearing on realism antirealism debates and interrogate epistemic aspects of individuation in scientific practice In exploring individuation from the philosophy of biology physics and other scientific subjects this volume ultimately argues for the possibility of several criteria of individuation upending the tenets of traditional metaphysics It provides insights for philosophers of science but also for scientists interested in the conceptual foundations of their work

The Four-Category Ontology E. J. Lowe, 2006 E J Lowe sets out and defends his theory of what there is His four category ontology is a metaphysical system that recognizes two fundamental categorial distinctions which cut across each other to generate four fundamental ontological categories The distinctions are between the particular and the universal and between the substantial and the non substantial The four categories thus generated are substantial particulars non substantial particulars substantial universals and non substantial universals Non substantial universals include properties and relations conceived as universals Non substantial particulars include property instances and relation instances otherwise known as non relational and relational tropes or modes Substantial particulars include property individuals the paradigm examples of which are persisting concrete objects Substantial universals are otherwise known as substantial kinds and include as paradigm examples natural kinds of persisting objects This ontology has a lengthy pedigree many commentators attributing it to Aristotle on the basis of certain passages in his apparently early work the Categories At various times during the history of Western philosophy it has been revived or rediscovered but it has never found universal favour perhaps on account of its apparent lack of parsimony as well as its commitment to universals In pursuit of ontological economy metaphysicians have generally preferred to recognize fewer than four fundamental ontological categories However Occam's razor stipulates only that we should not multiply entities beyond necessity Lowe argues that the four category ontology has an explanatory power unrivalled by more parsimonious systems and that this counts decisively in its favour He shows that it provides a powerful explanatory framework for a unified account of causation dispositions natural laws natural necessity and many other related matters such as the semantics of counterfactual conditionals and the character of the truthmaking relation As such it constitutes a thoroughgoing metaphysical foundation for natural science

Political Identity and the Metaphysics of Politics Gabriele De Anna, Manuele Dozzi, 2023-05-05 The chapters in this volume clarify the notion of political

identity by focusing on the metaphysics of politics By analysing the notion of political identity they provide the conceptual resources for a deeper understanding of the theoretical and practical debates on populism the crisis of sovereignty the feasibility of a world government and ethical religious and cultural pluralism What is a political community Any answer to this question lies at the intersection between three fields metaphysics philosophy of action and political philosophy The question concerns how and why a plurality of individuals becomes a political unity what principles or forces keep that unity together and what threats that unity can encounter In this volume the contributors investigate how different metanormative views affect the possible answers to this metaphysical question They explore the role that the individual identities of agents play in grounding common practices that underpin political life They investigate the individual identities of agents as the result of the interplay between natural and cultural factors Finally they observe the ways in which a political community as a collection of individuals who hang together in an attempt to reach common purposes demonstrate a certain metaphysical solidity Political Identity and the Metaphysics of Politics will appeal to researchers and advanced students working in metaphysics political philosophy political theory and philosophy of action **The Ways Things Are** Christian

Kanzian, Winfried Löffler, Josef Quitterer, 2013-05-02 This book is a collection of essays in systematic ontology The parts of its title Things and Ways They Are are indicative of two broadly and intensively discussed issues in current ontology namely what categories of entities there are and in what ways they are relevant for our discourses The three sections of the volume correspond to focuses of ontological research Before Ontology is dedicated to conceptual methodological and meta-ontological issues Ontology at Work raises general topics of categorial ontology and the final section Ontology in Application discusses questions such as those relating to free will and our conception of the human being The book is a tribute to Edmund Runggaldier on the occasion of his 65th birthday Its seventeen papers are authored by such distinguished scholars as Lynne Rudder Baker Franz von Kutschera E J Lowe Otto Muck Paul Weingartner Timothy Williamson and many others
