## **Poverty And Vulnerability In Dhaka Slums The Urban Livelihood Study:**

**Poverty and Vulnerability in Dhaka Slums** Jane A. Pryer, 2017-03-02 Bangladesh has low levels of urbanization but a high urban population in absolute terms being one of the most densely populated countries in the world Rapid urbanization in developing countries brings numerous problems and challenges urban poverty is one important issue This important volume presents the findings of a complex and revealing multidisciplinary cohort study conducted in the slums of Dhaka Bangladesh Detailed information was assembled on material social and economic conditions livelihoods health and nutritional status Together with associated qualitative work the data forms the basis for understanding groups who are vulnerable to economic and environmental shocks and stresses and for differentiating strategies which might be adaptive in situations of hardship and scarcity The author examines many aspects of poverty and vulnerability including livelihoods work disabling illness and coping strategies the female workforce women s negotiation and well being marital instability child labour and investments in health and nutrition and utilizes the assembled material to debate on policy options Urban Poverty and Climate Change Manoj Roy, Sally Cawood, Michaela Hordijk, David Hulme, 2016-04-20 This book deepens the understanding of the broader processes that shape and mediate the responses to climate change of poor urban households and communities in Asia Africa and Latin America Representing an important contribution to the evolution of more effective pro poor climate change policies in urban areas by local governments national governments and international organisations this book is invaluable reading to students and scholars of environment and development studies **Urban Poverty in the Global South** Diana Mitlin, David Satterthwaite, 2013 This is compounded by the lack of voice and influence that low income groups have in these official spheres **Health in Megacities and Urban Areas** Alexander Krämer, Mobarak Hossain Khan, Frauke Kraas, 2011-07-06 Diverse driving forces processes and actors are responsible for different trends in the development of megacities and large urban areas Under the dynamics of global change megacities are themselves changing On the one hand they are prone to increasing socio economic vulnerability due to pronounced poverty socio spatial and political fragmentation sometimes with extreme forms of segregation disparities and conflicts On the other hand megacities offer positive potential for global transformation e g minimisation of space consumption highly effective use of resources efficient disaster prevention and health care options if good strategies were developed At present in many megacities and urban areas of the developing world and the emerging economies the quality of life is eroding Most of the megacities have grown to unprecedented size and the pace of urbanisation has far exceeded the growth of the necessary infrastructure and services As a result an increasing number of urban dwellers are left without access to basic amenities like clean drinking water fresh air and safe food Additionally social inequalities lead to subsequent and significant intra urban health inequalities and unbalanced disease burdens that can trigger conflict and violence between subpopulations The guiding idea of our book lies in a multi and interdisciplinary approach to the complex topic of megacities and urban health that can only be adequately

understood when different disciplines share their knowledge and methodological tools to work together We hope that the book will allow readersto deepen their understanding of the complex dynamics of urban and megacity populations through the lens of public health geographical and other research perspectives *Participatory Governance* , *Scaling Urban Environmental Challenges* Peter J Marcotullio,Gordon McGranahan,2012-06-25 Think globally act locally emphasizes the importance of scale in dealing with environmental challenges but not how to factor it in This major new book focuses on the spatial dimensions of urban environmental burdens showing how important it is to take these into account when pursuing environmental justice and good governance whether in the context of the sanitary risks of slum living the pollution of uncontrolled industrialization and motorization or the enormous ecological footprints of affluent urban lifestyles Written by leading experts in the fields of urban development and environmental planning the book reviews the urban environmental shifts that have shaped todays challenges and examines conditions and problems in the urban centres of low middle and high income countries Case studies address such economically diverse cities as Accra New Delhi Mexico City and Manchester while thematic chapters explore issues including water sanitation and transportation The book concludes by exploring and analysing different scales of governance The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation nor depend only on global governance for global challenges such as greenhouse gas emissions but that scale is crucial in both understanding the problems and devising successful responses Published with UNU IAS and IIED Urban Poverty in Bangladesh Shahadat Hossain,2010-11-30 The analysis of urban poverty has traditionally been dominated by economic approaches often neglecting the social questions arising from poverty This book seeks to redress the balance and is based on both quantitative and qualitative data collected from different slums in Dhaka City Bangladesh Shahadat Hossain shows that the slum communities experience the highest level of poverty and marginality in the city They remain very much dependent on their families and social networking in their struggle to adapt to urban life This book will be invaluable for those working in the areas of urban studies development studies Asian studies sociology and social policy studies *The Under-estimation of Urban Poverty in Low and Middle-income Nations* David Satterthwaite,2004 *Beyond the Resources of Poverty* Sebnem Eroglu,2016-04-08 This groundbreaking volume researches the lives of gecekondu settlers in the capital city of Turkey in order to understand how households cope with poverty and why some households are more successful than others in reducing their deprivation It takes a critical stance towards existing conceptions such as household survival livelihood and coping strategy and develops an alternative model based on four types of household response to poverty income generation income allocation consumption and investment In explaining household responses and their outcomes for poverty the book demonstrates the role of different resources beyond income including social economic and cultural capital It emphasises broader structural factors such as labour market processes and state policies which influence the availability and or benefit delivery capacity of household resources and thereby moves beyond the dominant view which

overemphasises the resilience of the poor Gender divisions within the household are also examined The book adopts an innovative method for measuring poverty The new method combines objective and subjective dimensions of deprivation to develop a unique way of addressing two central questions what are those standards of living whose absence indicates deprivation and how can the value of each standard of living be determined
